[Venture Capital Performance](#) Apr 24 2022 European venture capital (VC) funds have historically underperformed their US counterparts. This has resulted in reduced investment into European VC by the traditional institutional investors. This book investigates the factors that give rise to the performance difference. It is based on the author ' s research at the Adam Smith Business School, University of Glasgow which involved a qualitative study of some 64 VC firms in the UK, continental Europe and the US, supplemented by 40 interviews with other stakeholders, including limited partner investors, corporate venturers, entrepreneurs and advisors. Readers will gain an in-depth understanding of the various structural, operational and wider environmental factors that impact on the performance difference between UK/European and US VC funds. The study is unique in that it provides, for the first time, a holistic and extensive analysis of the entire investment process from sourcing deals to exiting deals specifically contrasting Europe and the US in terms of the variables pertaining to the investment process and the impact on the fund performance. Factors impacting on the performance differential are structural, resulting from characteristics of the funds themselves, operational such as the investment practices of the VC firms which manage the funds and environmental such as culture and attitude to risk and the wider ecosystem in which the funds operate. These factors are set out clearly for the reader. The characteristics of the better performing funds in Europe and the US are also investigated. The book is aimed at academics who are researching venture capital fund performance and investment practices and also at practitioners, advisors and policymakers who want to learn about best VC investment practices. Whilst the book is focused on European and US VC investing, the best practices are also pertinent for VC firms and funds setting up in other geographies, particularly in emerging markets. To this end, best practice guidelines based on the research are included.

By his early thirties, he had helped build two successful start-ups-one went public, the other was acquired. Now he draws on his experience and unique perspective on the "other side" as a venture capitalist helping entrepreneurs bring their dreams to fruition. Bussgang offers detailed insights, colorful stories, and practical advice gathered from his own experience as well as from interviews with dozens of the most successful players on both sides of the game, including Twitter's Jack Dorsey and LinkedIn's Reid Hoffman. The Power Law Mar 31 2020 From an award-winning financial historian comes the gripping, character-driven story of venture capital and the world it made Innovations rarely come from "experts." Jeff Bezos was not a bookseller; Elon Musk was not in the auto industry. When it comes to innovation, a legendary venture capitalist told Sebastian Mallaby, the future cannot be predicted, it can only be discovered. Most attempts at discovery fail, but a few succeed at such a scale that they more than make up for everything else. That extreme ratio of success and failure is the power law that drives venture capital, Silicon Valley, the tech sector, and, by extension, the world. Drawing on unprecedented access to the most celebrated venture capitalists of all time, award-winning financial historian Sebastian Mallaby tells the story of this strange tribe of financiers who have funded the world's most successful companies, from Google to SpaceX to Alibaba. With a riveting blend of storytelling and analysis, The Power Law makes sense of the seeming randomness of success in venture capital, an industry that relies, for good and ill, on gut instinct and personality rather than spreadsheets and data. We learn the unvarnished truth about some of the most iconic triumphs and infamous disasters in the history of tech, from the comedy of errors that was the birth of Apple to the venture funding that fostered hubris at WeWork and Uber to the industry's notorious lack of women and ethnic minorities. Now the power law echoes around the world: it has transformed China's digital economy beyond recognition, and London is one of the top cities for venture capital investment. By taking us so deeply into the VCs' game, The Power Law helps us think about our own future through their eyes.

Demystifying Venture Capital Aug 24 2019 Venture Capital is a marriage between 'people with money and no ideas' and 'people with ideas and no money'. It is a high-risk investment vehicle with the potential for manifold returns and the possibility of a complete investment written-off. Although it is essentially private money and smaller in size than traditional financing pillars, its impact has been phenomenal, even to the extent of transforming the way we live in the modern world. Yet the fact remains that the business of venture capital is not fully understood by startup founders and fund managers are also not familiar with the inner workings of other venture funds. And, as more public or tax-players' money flows into this asset class, it begs a shift from the existing esoteric styles to more transparent and predictable operations. It would also be beneficial if the craft of venture capital is well understood by the business community and most importantly, policymakers as Demystifying Venture Capital: How it works and How to get primarily written to address these concerns, and to explain the subject in a nontechnical manner, as far as possible. A handbook for fund managers, startups, academicians interested in the subject, policy makers, and aspiring entrepreneurs, this book is unique as it has been written along with the top 25 venture funds in India as co-authors. Global Venture Capital Transactions Jan 22 2022 The venture capital and private equity industries are among the most characteristic and visible segments of today's global economy. As we approach the midpoint of the first decade of the 21st century, these industries have clearly matured and left behind the much-publicized excesses of the 1990s. It is now incumbent upon practitioners to thoroughly understand the legal structure of venture capital transactions, not only in their own country but also due to the typically cross-border nature of such transactions' in numerous jurisdictions worldwide. This very useful book has been prepared under the auspices of the International Association of Young Lawyers (AIJA) following a working session held in Edinburgh in August 2003. It provides practitioners with the first overview of the legal requirements attached to venture capital transactions in a variety of jurisdictions, encompassing both developed and developing nations. An introductory chapter presents a global view, addressing venture capital issues that tend to arise under any legal circumstances. Then, for each of twelve countries, an experienced practitioner in the venture capital field offers detailed discussions of his or her country's legal system as it pertains to the protection of investors' rights and company's investments, regulatory issues, and enforcement. Specific topics discussed where applicable for each country include: documentation; due diligence; valuation standards; representations and warranties; intellectual property; compensation of key personnel; disclosure; exit strategy; corporate governance roles; tax issues; securities law requirements; restrictions on foreign direct investment; and availability of court orders. Global Venture Capital Transactions goes a long way to fulfilling the need of practitioners and entrepreneurs to structure cross-border venture capital transactions that are not only initially successful but enjoy continued profitability with the strength to overcome inevitable obstacles. It will be warmly welcomed by the venture capital and private equity community throughout the world.

This book establishes a clear theoretical framework involving risk management, information handling and the 'trading' of risk and information. Using powerful modern theory as a general and coherent frame of reference to analyse an extensive body of new evidence, the author shows how top investors manage risk and monitor investees, and examines the best relationship between investor and investee. Entrepreneur's Choice between Venture Capitalist and Business Angel for Start-Up Financing Nov 27 2019 Master's Thesis from the year 2013 in the subject Economics - Finance, grade: 8,0 (Top-Thesis), Maastricht University (Finance), language: English, abstract: The study extends the literature on venture capital by examining whether entrepreneur's choice for an external investor and certain firm characteristics have an impact on venture success or not. The focus is set on the differences in value creation by venture capitalists and business angels for ventures of the high- and low-technology sector. The assessment of a data set including 252 Series A financing rounds by venture capitalist firms, business angels and collaborative investments of both investors conducted between 2005 and 2012 unveils value enhancing aspects for all three financing solutions. Overall, start-ups initially financed by venture capitalist firms perform best with regard to general venture success (exit and survival rates), whereas start-ups collaboratively supported by venture capitalists and business angels have the highest chances to exit successfully through a trade sale. It becomes further apparent that ventures located in one of the high-technology industries 'internet', 'pharmaceuticals' and 'high-tech', ventures that are longer established in the market and ventures whose Series A financing round was executed more recently indicate an enhanced likelihood of success.

Venture Capital & the Finance of Innovation Aug 05 2020 "Many interesting developments have occurred in the world of venture capital since the publication of the first edition of this book in 2006, which prompted us to revise the book for the second edition. While the organization of the book remains unchanged, many of the chapters are substantially rewritten. For example, in Chapter 5, we re-ranked top VC firms, incorporating the latest performance statistics, fundraising and investment activities, notable exits, and (as always) our subjective opinions. In Chapter 6, we examine further evidence of the deepening globalization of the industry. In Chapters 3, 4, and 7, we analyze the impact of the 1999-2000 Internet bubble years on the VC risk and returns, as investments made in those years are finally mature and thus now a part of the performance evaluation analysis. We also incorporated expositional improvements throughout the book based on reader feedback on the first edition. Another feature of the new edition is that the VCV model, used extensively in Part III of the book, is now available as a Web-based application available on <http://VCVtools.com>. Significant collaborative efforts went into developing this tool, which we believe will be of interest to a broad audience, including practitioners interested in valuing VC-backed company stocks and employee stock options"
