The Cambridge Star Atlas Nov 15 2021 Provides information about the moon, star charts and monthly sky maps covering that which is visible each month in different hemispheres. Original. **COVID-19 and Higher Education in the Global Context** Feb 18 2022 COVID-19 and Higher Education in the Global Context: Exploring Contemporary Issues and Challenges addresses the lasting impact of the novel coronavirus (COVID-19) in the higher education sector and offers insights that inform policy and practice. Framed in a global context, this timely book captures a wide variety of topics, including student mobility, global partnerships and collaboration, student health and wellbeing, enrollment management, employability, and graduate education. It is designed to serve as a resource for scholar-

practitioners, policymakers, and university administrators as they reimagine their work of comparative and international higher education in times of crisis. The collection of chapters assembled in this volume calls for a critical reflection on the opportunities and challenges that have emerged as a result of the global pandemic and provides as a basis for how tertiary education systems around the world can learn from past experiences and shared viewpoints as institutions recalibrate operations, innovate programs, and manage change on their respective campuses. *Lost Stars* Jan 17 2022 This book identifies the 'lost stars' of Bayer, Lacaille, Flamsteed, and other pioneering astronomers of the 17th and 18th centuries, and explains how and why these stars seem to have disappeared from modern star catalogues and atlases. In a style that will

appeal to the novice as well as the seasoned astronomer, the author provides an introduction to early modern astronomy. The book reviews the composition and history of the 88 constellations recognised by the International Astronomical Union. In an account for each constellation the author includes a synopsis, in chart form, that tells the reader at a glance how many lettered or numbered stars there are in the constellation, the magnitude and catalogue numbers for those stars, and who first lettered or numbered each star. The author then describes the stars that have been 'lost' or mislabelled and explains, in detail, their troublesome status. *This Is the Star* Jun 17 2019 A cumulative presentation which uses rhyme to describe the night of the birth of Christ. *The Star Book for Ministers* Mar 27 2020 Up and Down Feb 06 2021 From the illustrator of the #1

smash hit *The Day the Crayons Quit* comes a humorous, resonant tale about the value of shared experiences. A penguin has wings for a reason . . . doesn't he? Having a best friend with his own airplane is one thing, but actually experiencing what it feels like to fly by himself? Here is one penguin who believes this is precisely what he needs to feel complete. Only . . . if flying by himself is so wonderful, then why does he feel so empty? Because some experiences are better shared. (And penguins are much happier on the ground.) Oliver Jeffers delivers the perfect companion to his much-loved *Lost and Found*. Penguins everywhere will take flight in delight.

First Stars III Jun 10 2021
This conference explored the formation, life, and death of the earliest stars (also known as Population III stars) and their impact on subsequent structure formation and chemical evolution of the universe. First Stars III covered a wide range of observational topics, including star formation, stellar evolution, supernovae, and the search for primordial and metal-poor stars in the galactic halo.

Boundary Objects and Beyond Jun 29 2020
The multifaceted work of the late Susan Leigh Star is explored through a selection of her writings and essays by friends and colleagues. Susan Leigh Star (1954-2010) was one of the most influential science studies scholars of the last several

decades. In her work, Star highlighted the messy practices of discovering science, asking hard questions about the marginalizing as well as the liberating powers of science and technology. In the landmark work *Sorting Things Out*, Star and Geoffrey Bowker revealed the social and ethical histories that are deeply embedded in classification systems. Star's most celebrated concept was the notion of boundary objects: representational forms—things or theories—that can be shared between different communities, with each holding its own understanding of the representation. Unfortunately, Leigh was unable to complete a work on the poetics of infrastructure that further developed the full range of her work. This volume collects articles by Star that set out some of her thinking on boundary objects, marginality, and infrastructure, together with essays by friends and colleagues from a range of disciplines—from philosophy of science to organization science—that testify to the wide-ranging influence of Star's work. Contributors Ellen Balka, Eevi E. Beck, Dick Boland, Geoffrey C. Bowker, Janet Ceja Alcalá, Adele E. Clarke, Les Gasser, James R. Griesemer, Gail Hornstein, John Leslie King, Cheri Kramarae, Maria Puig de la Bellacasa, Karen Ruhleder, Kjeld Schmidt, Brian Cantwell Smith, Susan Leigh Star, Anselm L. Strauss, Jane Summerton, Stefan Timmermans, Helen Verran, Nina Wakeford, Jutta Weber

The Sun Is Also a Star Sep 20 2019 The #1 New York Times bestseller and National Book Award Finalist from the bestselling author of *Everything, Everything* will have you falling in love with Natasha and Daniel as they fall in love with each other. Natasha: I'm a girl who believes in science and facts. Not fate. Not destiny. Or dreams that will never come true. I'm definitely not the kind of girl who meets a cute boy on a crowded New York City street and falls in love with him. Not when my family is twelve hours away from being deported to Jamaica. Falling in love with him won't be my story. Daniel: I've always been the good son, the good student, living up to my parents' high expectations. Never the poet. Or the dreamer. But when I see her, I forget about all that. Something about Natasha makes me think that fate has something much more extraordinary in store—for both of us. The Universe: Every moment in our lives has brought us to this single moment. A million futures lie before us. Which one will come true? *** "Beautifully crafted."-- People Magazine "A book that is very much about the many factors that affect falling in love, as much as it is about the very act itself . . . fans of Yoon's first novel, *Everything*

Strange Star Mar 07 2021 They were coming tonight to tell ghost stories. 'A tale to freeze the blood,' was the only rule. Switzerland, 1816. On a stormy summer night, Lord Byron and his guests are gathered round the fire. Felix, their serving boy, can't wait to hear their creepy tales. Yet real life is about to take a chilling turn—more chilling than any tale. Frantic pounding at the front door reveals a stranger, a girl covered in the most unusual scars. She claims to be looking for her sister, supposedly snatched from England by a woman called Mary Shelley. Someone else has followed her here too, she says. And the girl is terrified. This breathtaking new book from Emma Carroll, the critically-acclaimed author of *Frost Hollow*, *Hall, The Girl Who Walked On Air*, *In Darkling Wood* and *The Snow Sister*, is a deliciously creepy story inspired by the creation of *Frankenstein*, and is brought to life by a leading talent in children's literature. *Två mycket stora presentationer* Dec 24 2019

Spectrophotometric Dating of Stars and Galaxies Nov 03 2020

Discussing new opportunities and challenges of the convergence between the method and the question, the 49 papers cover young stars and star-forming systems, intermediate-age stars and galaxies, globular and other star clusters, and elliptical and DSPH galaxies. Each begins with a one-paragraph abstract. Only authors and celestial objects are indexed.

How to Catch a Star Sep 25 2022

From the illustrator of the #1 smash hit *The Day the Crayons Quit* comes a story about wishing, persevering, and reaching for the stars. Once there was a boy, and that boy loved stars very much. So much so that he decided to catch one of his very own. But how? Waiting for them to grow tired from being up in the sky all night doesn't work.

Climbing to the top of the tallest tree? No, not tall enough. The boy has a rocket ship . . . but it is made of paper and doesn't fly well at all. Finally, just when the boy is ready to give up, he learns that sometimes things aren't where, or what, we expect them to be. Oliver Jeffers offers a simple, childlike tale of reaching for the stars, and emerging with a friend.

Radial Velocities of Stars, Nebulae and Clusters Oct 14 2021

Star Oct 26 2022 All eyes are upon Rikio. And he likes it, mostly. His fans cheer from a roped-off section, screaming and yelling to attract his attention--they would kill for a moment alone with him. Finally the director sets up the shot, the camera begins to roll, someone yells "action"; Rikio, for a moment, transforms into another being, a hardened young yakuza, but as soon as the shot is finished, he slumps back into his own anxieties and obsessions. Being a star, constantly performing, being watched and scrutinized as if under a microscope, is often a drag. But so is life. Written shortly after Yukio Mishima himself had acted in the film "Afraid to Die," this novella is a rich and unflinching psychological portrait of a celebrity coming apart at the seams. With exquisite, vivid prose, Star begs the question: is there any escape from how we are seen by others?

Distant Star Apr 08 2021 The star in this hair-raising novel is Alberto Ruiz-Tagle, an Air Force pilot who exploits the 1973 coup in Chile to launch his own version of the New Chilean Poetry, a multimedia enterprise that symbolizes the darkness of Pinochet's regime.

Norton's Star Atlas and Reference Handbook, Epoch 2000.0 Apr 20 2022 The most famous guide to the stars is now the most accessible! Generations of amateur astronomers have called it

simply Norton's- the most famous star atlas in the world. Now in a beautifully redesigned, two-color landmark 20th edition, this combination star atlas and reference guide has no match in the field. First published in 1910, coinciding with the first of two appearances by Halley's Comet last century, Norton's owes much of its legendary success to its unique maps, arranged in slices or gores, each covering approximately one-fifth of the sky. Apart from being presented more accessibly than ever before, the text and tables have been revised and updated to account for the new and exciting developments in our observation of the cosmos. The star maps themselves were plotted using advanced computer techniques yielding outstanding accuracy and legibility. Every heavenly object visible to the naked eye is included-stars to magnitude 6, star clusters, and galaxies, as well as other celestial objects. Presented with an authority that has stood for generations, observation hints, technical explanations, and pointers to specialized information sources make this the only essential guide to the night sky. The updated and revised hardcover 20th edition also has new moon maps, clearer tables, new diagrams and a section on the latest computer driven telescopes-today's perfect home reference for curious minds from beginners to dedicated star gazers! What are people saying? . . . 'The unique and time-honored projection used in the Norton's star charts is

particularly handy and has always been my favorite.' -- Professor Owen Gingerich, Harvard-Smithsonian Center for Astrophysics 'Once in a blue moon a book appears to dramatically and forever change its subject; in short, the work becomes an indispensable resource for generations. Norton's Star Atlas is such a work.' -Leif J. Robinson, Editor Emeritus, Sky and Telescope 'Ian Ridpath is one of the most dedicated and prolific writers on astronomy. His works all have clarity and authority, and he is ideally suited to infuse new life into a classic.' -Martin Rees, Astronomer Royal, University of Cambridge, author of Our Final Hour
The Universal Book of Astronomy Sep 13 2021 Three thousand alphabetically arranged entries cover such topics as comets, asteroids, moons, planets, stars, nebulas, and galaxies.
Star in the Storm May 09 2021 In 1912, fearing for the safety of her beloved Newfoundland dog Sirius because of a new law outlawing non-shepherding dogs in her Newfoundland village, twelve-year-old Maggie tries to save him by keeping him hidden.
