Specialised Pharmaceutical Formulation Feb 25 2022 Formulation is a key step in the drug design process, where the active drug is combined with other substances that maximise the therapeutic potential, safety, and stability of the final medicinal product. Regulatory and quality demands, in addition to advances in processing technologies, result in growing challenges as well as possibilities for the field. Following on from Pharmaceutical Formulation, which covered traditional dosage forms such as tablets and capsules, this volume expands upon those formulations to cover a more diverse range of less common dosage forms. Novel routes of administration are covered from inhalational, dermal and transdermal formulations to ocular, oral suspensions, vaccines and nanoparticle drug delivery. The methods through which these formulations are processed and manufactured is also covered, providing essential knowledge to ensure quality, efficiency, and acceptable costing. Specialised Pharmaceutical Formulation is an

essential, up to date resource for students and researchers working in academia and in the pharmaceutical industry and will equip readers with the ability to effectively and reliably produce products which can be approved, manufactured and made available to administer to patients.

Compound Remedies Aug 10 2020 Compound Remedies examines the equipment, books, and remedies of colonial Mexico City's Herrera pharmacy—natural substances with known healing powers that formed part of the basis for modern-day healing traditions and home remedies in Mexico. Paula S. De Vos traces the evolution of the Galenic pharmaceutical tradition from its foundations in ancient Greece to the physician-philosophers of medieval Islamic empires and the Latin West and eventually through the Spanish Empire to Mexico, offering a global history of the transmission of these materials, knowledges, and techniques. Her detailed inventory of the Herrera pharmacy reveals the many layers of this tradition and how it developed over centuries, providing new perspectives and insight into

the development of Western science and medicine: its varied origins, its engagement with and inclusion of multiple knowledge traditions, the ways in which these traditions moved and circulated in relation to imperialism, and its long-term continuities and dramatic transformations. De Vos ultimately reveals the great significance of pharmacy, and of artisanal pursuits more generally, as a cornerstone of ancient, medieval, and early modern epistemologies and philosophies of nature.

Formulating Poorly Water Soluble Drugs Nov 24 2021 The objective of this volume is to consolidate within a single text the most current knowledge, practical methods, and regulatory considerations pertaining to formulations development with poorly water-soluble molecules. A pharmaceutical scientist's approach toward solubility enhancement of a poorly water-soluble molecule typically includes detailed characterization of the compound's physiochemical properties, solid-state modifications, advanced formulation design, non-conventional process technologies, advanced analytical characterization, and specialized product performance analysis techniques. The scientist must also be aware of the unique regulatory considerations pertaining to the non-conventional approaches often utilized for poorly water-soluble drugs. One faced with the challenge of developing a drug product from a poorly soluble compound must possess at minimum a working knowledge of each of the abovementioned facets and detailed knowledge of most. In light of the magnitude of the growing solubility problem to drug development, this is a significant burden especially when considering that knowledge in most of these areas is relatively new and continues to develop

Di- and Polynuclear Compounds 5 Nov 12 2020 The present volume is the fifth and for the present moment last in a series of volumes on organotitanium compounds. It covers the literature to the end of 1987. The volume continues the treatment of titanium compounds with the dinuclear and polynuclear complexes. The main part of this volume deals with the dinuclear complexes and therein $(\text{-C}_5\text{H}_5)_2\text{TiCl}_2$ is the most frequently described compound. Another key compound in this volume is the presumably oligomeric $\text{-C}_5\text{H}_5\text{TiCl}_2$ n. This volume also deals with different "titanocenes" described in the literature. There are also well-defined tri- and tetranuclear compounds, one penta- and a few hexanuclear compounds. "Black titanocene" is described together with the oligonuclear

compounds. Polymers containing (+-C5H5)2TiIV units conclude this volume. As in the preceding volumes of this series, compounds of debatable existence and postulated reaction intermediates are included for completeness. A Formula Index and a Ligand Formula Index for this volume are included.

Handbook of Polyester Molding Compounds and Molding Technology Jul 01 2022 This book should be of interest to students and practitioners of materials science, production engineering, and engineering and design.

Pharmaceutical Aspects of Cancer Chemotherapy Oct 04 2022 Pharmaceutical Aspects of Cancer Chemotherapy tackles the concerns in drug formulation and delivery in chemotherapy. The book is comprised of six chapters that cover the physicochemical properties, handling, and administration of chemotherapy drugs. The text first covers the absorption and distribution of anticancer drugs, and then proceeds to covering cytotoxic drug delivery. Next, the book tackles drug interactions with cytotoxic agents. Chapter 4 talks about handling cytotoxic drugs, while Chapter 5 deals with the stability of solutions of anticancer drugs. The last chapter discusses the development and production of cytotoxic drug formulation. The book will be of great use to researchers and practitioners dealing with the research and treatment of cancer.

Formulating, Packaging, and Marketing of Natural Cosmetic Products Sep 10 2020 Balanced coverage of natural cosmetics, and what it really means to be "green" The use of natural ingredients and functional botanical compounds in cosmetic products is on the rise. According to industry estimates, sales of natural personal care products have exceeded \$7 billion in recent years. Nonetheless, many misconceptions about natural products—for instance, what "green" and "organic" really mean—continue to exist within the industry. *Formulating, Packaging, and Marketing of Natural Cosmetic Products* addresses this confusion head-on, exploring and detailing the sources, processing, safety,

efficacy, stability, and formulation aspects of natural compounds in cosmetic and personal care products. Designed to provide industry professionals and natural product development experts with the essential perspective and market information needed to develop truly "green" cosmetics, the book covers timely issues like biodegradable packaging and the potential microbial risks they present, the use of Nuclear Magnetic Resonance (NMR) to identify biomarkers, and chromatographic methods of analyzing natural products. A must-read for industry insiders, *Formulating, Packaging, and Marketing of Natural Cosmetic Products* provides the reader with basic tools and concepts to develop naturally derived formulas.

Handbook of Inorganic Compounds Jul 21 2021 This updated edition of the *Handbook of Inorganic Compounds* is the perfect reference for anyone that needs property data for compounds, CASRN numbers for computer or other searches, a consistent tabulation of molecular weights to synthesize inorganic materials on a laboratory scale, or data related to physical and chemical properties. Fully revised

Handbook of Copper Compounds and Applications Feb 02 2020 Emphasizing the utility of copper-related compounds, this text illustrates the numerous current and potential uses from agricultural bactericides and wood preservatives to colourants and solar cells. It discusses the properties and behaviour of the copper ion, copper compounds' employment in organic polymerization and isomerization reactions, the enhancement of feed efficiencies and additives in plant and animal nutrition, and more.

Beyond the Molecular Frontier Jan 15 2021 Chemistry and chemical engineering have changed significantly in the last decade. They have broadened their scope into biology, nanotechnology, materials science, computation, and advanced methods of process systems engineering and control so much that the programs in most chemistry and chemical engineering departments now barely resemble the classical notion of chemistry. *Beyond the Molecular Frontier* brings together research, discovery, and invention across the entire spectrum of the chemical sciences from fundamental, molecular-level chemistry to large-scale chemical processing technology. This reflects the way the field has evolved, the synergy at universities between research and education in chemistry and chemical engineering, and the way chemists and chemical engineers work together in industry. The astonishing developments in science and engineering during the 20th century have made it possible to dream of new goals that

might previously have been considered unthinkable. This book identifies the key opportunities and challenges for the chemical sciences, from basic research to societal needs and from terrorism defense to environmental protection, and it looks at the ways in which chemists and chemical engineers can work together to contribute to an improved future.

Ni Organonickel Compounds Dec 02 2019 This volume starts the updating of the information on organonickel chemistry, one of the most active areas of modern organometallic chemistry. It covers all mononuclear compounds containing one nickel-to-carbon bond. The main part is devoted to the family of planar NiII compounds, $RNi(D)2X$, which within 20 years has increased from about 250 to more than 1000 members. This research interest has been stimulated by the fact that many compounds insert various unsaturated species into the Ni-C bond to create new organonickel species. Moreover, these compounds are important as intermediates in many catalytic processes involving organic halides. Compounds containing η^2 -bonded heteroalkene molecules including the C1 fragments CO_2 and CS_2 , and related metallocyclic compounds are also emphasized in this volume. These types of compounds play an important role in a number of nickel-catalyzed co-oligomerization reactions involving unsaturated organic compounds. Most of the compounds are well-characterized by modern spectroscopic techniques. The various types of compounds are in most cases confirmed by X-ray diffraction. The author of these volumes, a member of the M lheim group, has made many contributions of his own and is eminently qualified to critically review this area of research.
