**How to Improve Management of Ideas** Mar 29 2022 Innovation has a more and more important role in all industries, leading to a growing interest on the efficient management of the innovation process. For a better understanding of this process, it has been organised in 5 stages: idea generation, idea selection, idea development, idea implementation and revision. This work provides a short review for each one of these 5 stages of the innovation process, its tools, methodologies and processes. The AutoEuropa case study, described in this work, illustrates an innovation process in which a large number of tools and methodologies have been used with excellent results. In this case, a prototype idea management system has been used with a strong impact on the results, specially, at the organisation and productivity level of the idea management team. For a better understanding of the current practices of innovation management, a survey has been developed, distributed and analysed. The survey results provided information on which are the tools and methodologies more used and graded the organisations as active, watcher or passive. From the analysis of the results, it was possible to detect significant correlations between the use of the different tools and confirm that the organisation described in the case study had made a strongly innovative initiative.

**50 Quick Ways to Improve Feedback and Marking** Feb 13 2021 50 Quick Ways to Improve Feedback and Marking takes you to the heart of raising achievement and ensuring great progress. It's through feedback that we give students access to our expertise. They take this, apply it, internalise it and, as a result, change their knowledge and understanding for the better. It's through marking that we gain an accurate sense of what students can do, where they are at and what support they need to get better. These two central elements of any teacher's job are not identical, but they do sit in close connection with each other. Marking provides the information we need to give high-quality feedback. Feedback is the information students need so that their next piece of work - or their next effort - is better than the last. This book is all about the practical strategies you can use to improve the quality, impact and efficiency of the feedback you give and the marking you do. These two aspects of teaching have a huge impact on students. Good, timely feedback which students understand and have a chance to implement can have a significant impact on achievement. Similarly, effective and efficient marking is essential if teachers want to gain a sound understanding of where their students are at, and want to modify and adapt their planning, teaching and future assessment accordingly. In this book you'll find fifty strategies, activities and techniques you can use to improve the quality, efficiency and effectiveness of your feedback and marking. **Mindset Mathematics: Visualizing and Investigating Big Ideas, Grade 1** Sep 10 2020 Engage students in mathematics using growth mindset techniques The most challenging parts of teaching mathematics are engaging students and helping them understand the connections between mathematics concepts. In this volume, you'll find a collection of low floor, high ceiling tasks that will help you do just that, by looking at the big ideas at the first-grade level through visualization, play, and investigation. During their work with tens of thousands of teachers, authors Jo Boaler, Jen Munson, and Cathy Williams heard the same message—that they want to incorporate more brain science into their math instruction, but they need guidance in the techniques that work best to get across the concepts they needed to teach. So the authors designed Mindset Mathematics around the principle of active student engagement, with tasks that reflect the latest brain science on learning. Open, creative, and visual math tasks have been shown to improve student test scores, and more importantly change their relationship with mathematics and start believing in their own potential. The tasks in Mindset Mathematics reflect the lessons from brain science that: There is no such thing as a math person - anyone can learn mathematics to high levels. Mistakes, struggle and challenge are the most important times for brain growth. Speed is unimportant in mathematics. Mathematics is a visual and beautiful subject, and our brains want to think visually about mathematics. With engaging questions, open-ended tasks, and four-color visuals that will help kids get excited about mathematics, Mindset Mathematics is organized around nine big ideas which emphasize the connections within the Common Core State Standards (CCSS) and can be used with any current curriculum.
