Draft SRA/RA Systems Design Manual Feb 02 2020 This manual has been written to support aid to navigation system design and maintenance functions performed at the District Office. In Section 1, the procedure presented applies the findings of the project to the specific problem of assigning priorities for the maintenance of individual aids when resources are limited. In Section 2, the procedure presented relates channel or harbor conditions to the aid to navigation systems needed to provide adequate performance. In Section 3, instructions and piloting performance data are provided for design methods which seek to 'manage' the risk of accidents. A second approach described is to design AN systems while considering the cost tradeoff between providing an aid to navigation system versus the value of the increased safety. A series of data collection efforts were conducted on shiphandling simulators and at sea specifically to derive design data for use in this manual. There were five visual simulator efforts, three radio aid simulator efforts, and two at-sea data collections. The draft manual is highly annotated with reference to these efforts.

Radar and ARPA Manual Apr 05 2020 Radar and ARPA Manual focuses on the theoretical and practical aspects of electronic navigation. The manual first discusses basic radar principles, including principles of range and bearing measurements and picture orientation and presentation. The text then looks at the operational principles of radar systems. Function of units; aerial, receiver, and display principles; transmitter principles; and siting of units on board ships are discussed. The book also describes target detection, Automatic Radar Plotting Aids (ARPA), and operational controls of radar systems, and then discusses radar plotting. Errors associated with the true-motion presentation; accuracy and errors of manual plotting; radar plotting aids; and regulations for preventing collisions at sea as applied to radar and ARPA are described. The book also underscores the accuracy and errors of ARPA. The test scenarios; errors generated in the radar installation; classification of ARPA error sources; and errors in displayed data and interpretation are explained. The manual is a good source of information for readers wanting to study electronic navigation.

Coast Guard Navigation Standards Oct 12 2020 The Coast Guard knows how to navigate (even if the Navy doesn't!). This official guide to Coast Guard navigation procedures is an excellent resource for anyone who is responsible for safe navigation at sea. As the Manual observes: Navigation is a critical and fundamental competency for all underway operations. This Manual assists CO/OICs and Navigators in carrying out their responsibilities outlined in Reference (a), and complements References (b) through (l). It also provides uniform standards and guidance to ensure the navigational accuracy and safety of Coast Guard cutters, boats, and their crews during operations. This Manual leverages the capabilities provided by electronic navigation systems found on cutters, cutter boats, and boats while retaining the capability to conduct traditional forms of navigation if, and when, electronic means of navigation are not available. Analysis of operational mishaps and studies have shown that risks associated with navigation can be systematically controlled by: (1) Strong knowledge and skills in navigation fundamentals, doctrine, and techniques. (2) Preventing accumulation of errors in the flow of information. (3) Verifying vessel position using all available means. (4) Strong knowledge regarding the structure, capabilities, and limitations of electronic charting and Global Positioning System (GPS) data. (5) Compliance with established navigational procedures.
