Optimization of Computer Networks Jul 11 2021 This book covers the design and optimization of computer networks applying a rigorous optimization methodology, applicable to any network technology. It is organized into two parts. In Part 1 the reader will learn how to model network problems appearing in computer networks as optimization programs, and use optimization theory to give insights on them. Four problem types are addressed systematically – traffic routing, capacity dimensioning, congestion control and topology design. Part 2 targets the design of algorithms that solve network problems like the ones modeled in Part 1. Two main approaches are addressed – gradient-like algorithms inspiring distributed network protocols that dynamically adapt to the network, or cross-layer schemes that coordinate the cooperation among protocols; and those focusing on the design of heuristic algorithms for long term static network design and planning problems. Following a hands-on approach, the reader will have access to a large set of examples in real-life technologies like IP, wireless and optical networks. Implementations of models and algorithms will be available in the open-source Net2Plan tool from which the user will be able to see how the lessons learned take real form in algorithms, and reuse or execute them to obtain numerical solutions. An accompanying link to the author's own Net2plan software enables readers to produce numerical solutions to a multitude of real-life problems in computer networks (www.net2plan.com).

Guesstimation 2.0 Jun 17 2019 Simple and effective techniques for quickly estimating virtually anything Guesstimation 2.0 reveals the simple and effective techniques needed to estimate virtually anything—quickly—and illustrates them using an eclectic array of problems. A stimulating follow-up to Guesstimation, this is the must-have book for anyone preparing for a job interview in technology or finance, where more and more leading businesses test applicants using estimation questions just like these. The ability to guesstimate on your feet is an essential skill to have in today's world, whether you're trying to distinguish between a billion-dollar subsidy and a trillion-dollar stimulus, a megawatt wind turbine and a gigawatt nuclear plant, or parts-per-million and parts-per-billion contaminants. Lawrence Weinstein begins with a concise tutorial on how to solve these kinds of order of magnitude problems, and then invites readers to have a go themselves. The book features dozens of problems along with helpful hints and easy-to-understand solutions. It also includes appendixes containing useful formulas and more. Guesstimation 2.0 shows how to estimate everything from how closely you can orbit a neutron star without being pulled apart by gravity, to the fuel used to transport your food from the farm to the store, to the total length of all toilet paper used in the United States. It also enables readers to answer, once and for all, the most asked environmental question of our day: paper or plastic?

Assignment Problems in Parallel and Distributed Computing Feb 06 2021 This book has been written for practitioners, researchers and students in the fields of parallel and distributed computing. Its objective is to provide detailed coverage of the applications of graph theoretic techniques to the problems of matching resources and requirements in multiple computer systems. There has been considerable research in this area over the last decade and intense work continues even as this is being written. For the practitioner, this book serves as a rich source of solution techniques for problems that are routinely encountered in the real world. Algorithms are presented in sufficient detail to permit easy implementation; background material and fundamental concepts are covered in full. The researcher will find a clear exposition of graph theoretic techniques applied to parallel and distributed computing. Research results are covered and many hitherto unpublished spanning the last decade results by the author are included. There are many unsolved problems in this field—it is hoped that this book will stimulate further research.

Contemporary Business Mathematics for Colleges, Brief Course Apr 20 2022 Presenting a basic, arithmetic-based approach, CONTEMPORARY BUSINESS MATHEMATICS FOR COLLEGES, 17E uses step-by-step development of concepts, hands-on practice exercises, and real-world applications to effectively prepare students for careers in business. Practical skill-building activities are emphasized throughout as the book progresses, from the most basic to more complex business math topics. Numerous problems and examples are taken from actual businesses. In addition, self-check features such as end-of-section Concept Checks, end-of-chapter Bottom Lines, and end-of-chapter Review Problems enable students to test their understanding before advancing to other topics or assignments. A Creative Guide to Exploring Your Life Mar 07 2021 An award-winning psychologist and professional photographer join forces in writing this unique creative guide to exploring and understanding your life: who you are, what you value, and what you wish to achieve. A Creative Guide to Exploring Your Life brims with imaginative exercises and examples that use the power of photography, art, and writing as tools for self-discovery. It provides clear and accessible guidance on how to explore different parts of your identity: take a photograph of yourself in a role you don't typically play, draw a visual timeline of your life and consider its key turning points; explore your sense of place in history by writing about a major historical event that has changed your life. Exercises are accompanied by searching questions for self-reflection, and are complemented by examples of each exercise to provoke ideas and inspiration. Featuring additional guidance for teachers, counselors, and other professionals running the exercises in group settings, this book offers a dynamic and enjoyable way for you to explore different aspects of your life.

The Giver Feb 18 2022 Living in a "perfect" world without social ills, a boy approaches the time when he will receive a life assignment from the Elders, but his selection leads him to a mysterious man known as the Giver, who reveals the dark secrets behind the utopian facade.

Financial Accounting with International Financial Reporting Standards Jul 23 2022 While there is growing interest in IFRS within the US, interest outside the US has exploded. Weygandt's fourth edition of Financial Accounting: IFRS highlights the integration of more US GAAP rules, a desired feature as more foreign companies find the United States to be their largest market. The highly anticipated new edition retains each of the key features (e.g. TOC, writing style, pedagogy, robust EOC) on which users of Weygandt Financial have come to rely, while putting the focus on international companies/examples, discussing financial accounting principles and procedures within the context of IFRS, and providing EOC exercises and problems that present students with foreign currency examples instead of solely U.S. dollars.

Visual Economies Of/in Motion Oct 02 2020 Sport films have been central to American cinema, playing an increasingly important role in the communication of a commonsense understanding of race, gender, class, history, and social relations. Oddly, scholars have neglected sport films and their significance. Offering a comparative, theoretically grounded, and interdisciplinary approach, Visual Economies of/in Motion marks a novel and important point of departure in sport studies and cultural studies. It brings together a dozen essays on feature films and documentaries to probe the articulation of ideologies and identities, play and power, and sporting worlds and social fields. -- Amazon.com.

The Skin I'm in Oct 26 2022 Maleeka suffers every day from the taunts of the other kids in her class. If they're not getting at her about her homemade clothes or her good grades, it's about her dark, black skin. When a new teacher, whose face is blotched with a startling white patch, starts at their school, Maleeka can see there is bound to be trouble for her too. But the new teacher's attitude surprises Maleeka. Miss Saunders loves the skin she's in. Can Maleeka learn to do the same?

A Laboratory Course in C++ Aug 12 2021 Through hands-on lab exercises, this lab manual teaches the syntax and semantics of C++ constructs in a flexible framework that is perfect for both closed lab settings and independent learning. The exercises are broken into three types of activities: Pre-Lab: Reading review and paper-and-pencil exercises designed to ensure understanding of the material to be covered in the exercises In-Lab: Individual lessons broken into exercises specifically mapped to the concepts covered in the chapter Post-Lab: Programming assignments which can be done independently and cover the important topics from the chapter Checklist cover sheets allow students and instructors to track the assignments, output, and grading for each exercise. Perforated pages aid in submission and grading of exercises and homework assignments.

Committee Assignment Politics in the U.S. House of Representatives Apr 27 2020 In this groundbreaking work, Scott A. Frisch and Sean Q Kelly draw on significant new data from congressional archives—gleaned from the papers of both Democratic and Republican leaders from the 85th to the 103rd Congress—to reveal the complex process through which congressional members get assigned to the powerful committees of the House. They conclude that parties differ in their committee assignment methods and that party approaches can change over time depending on leadership. They also pay particular attention to the increasing roles of race and gender in the assignment process. Based on extensive primary and secondary research, this volume fills a crucial gap in our understanding of the internal dynamics of the American political system.

Operation Research Mar 19 2022 Operations research is the fast developing branch of science which deals with the most of the engineering activities. It consist of many models which are used to obtain the optimum solution for different activities. Operations research is a procedure which is executed iteratively for comparing various solutions till the optimum or satisfactory solution is obtained. An important aspect of the optimal design process is the formulation of the problem in a mathematical format which is acceptable to an algorithm and thus find out the optimal solution. These techniques are extensively used in those engineering design problem where the emphasis is on maximising or minimising a certain goal. This book is the introduction to the different techniques in operations research. The subject does not require a high level of mathematical knowledge. Each chapter of the book have examples from variety of

fields. Our hope is that this book, through its careful explanations of concepts, practical examples and techniques bridges the gap between knowledge and proper application of that knowledge.

Efrén Divided May 21 2022 Winner of the Pura Belpré Award! “We need books to break open our hearts, so that we might feel more deeply, so that we might be more human in these unkind times. This is a book doing work of the spirit in a time of darkness.” —Sandra Cisneros, author of *The House on Mango Street* Efrén Nava’s Amá is his Superwoman—or Soperwoman, named after the delicious Mexican sopes his mother often prepares. Both Amá and Apá work hard all day to provide for the family, making sure Efrén and his younger siblings Max and Mía feel safe and loved. But Efrén worries about his parents; although he’s American-born, his parents are undocumented. His worst nightmare comes true one day when Amá doesn’t return from work and is deported across the border to Tijuana, México. Now more than ever, Efrén must channel his inner Soperboy to help take care of and try to reunite his family. A glossary of Spanish words is included in the back of the book.

The Chocolate War Dec 24 2019 One of the most controversial YA novels of all time, *The Chocolate War* is a modern masterpiece that speaks to fans of S. E. Hinton’s *The Outsiders* and John Knowles’s *A Separate Peace*. After suffering rejection from seven major publishers, *The Chocolate War* made its debut in 1974, and quickly became a bestselling—and provocative—classic for young adults. This chilling portrait of an all-boys prep school casts an unflinching eye on the pitfalls of conformity and corruption in our most elite cultural institutions. “Masterfully structured and rich in theme; the action is well crafted, well timed, suspenseful.”—*The New York Times Book Review* “The characterizations of all the boys are superb.”—*School Library Journal*, starred review “Compellingly immediate. . . . Readers will respect the uncompromising ending.”—*Kirkus Reviews*, starred review An ALA Best Book for Young Adults A School Library Journal Best Book of the Year A Kirkus Reviews Editor’s Choice A New York Times Outstanding Book of the Year

Impact Evaluation in Practice, Second Edition Feb 24 2020 The second edition of the *Impact Evaluation in Practice* handbook is a comprehensive and accessible introduction to impact evaluation for policy makers and development practitioners. First published in 2011, it has been used widely across the development and academic communities. The book incorporates real-world examples to present practical guidelines for designing and implementing impact evaluations. Readers will gain an understanding of impact evaluations and the best ways to use them to design evidence-based policies and programs. The updated version covers the newest techniques for evaluating programs and includes state-of-the-art implementation advice, as well as an expanded set of examples and case studies that draw on recent development challenges. It also includes new material on research ethics and partnerships to conduct impact evaluation. The handbook is divided into four sections: Part One discusses what to evaluate and why; Part Two presents the main impact evaluation methods; Part Three addresses how to manage impact evaluations; Part Four reviews impact evaluation sampling and data collection. Case studies illustrate different applications of impact evaluations. The book links to complementary instructional material available online, including an applied case as well as questions and answers. The updated second edition will be a valuable resource for the international development community, universities, and policy makers looking to build better evidence around what works in development.

Oracle 12c: SQL Jun 10 2021 Introduce the latest version of the fundamental SQL language used in all relational databases today with Casteel’s *ORACLE 12C: SQL, 3E*. Much more than a study guide, this edition helps those who have only a basic knowledge of databases master the latest SQL and Oracle concepts and techniques. Learners gain a strong understanding of how to use Oracle 12c SQL most effectively as they prepare for the first exam in the Oracle Database Administrator or Oracle Developer Certification Exam paths. This edition initially focuses on creating database objects, including tables, constraints, indexes, sequences, and more. The author then explores data query techniques, such as row filtering, joins, single-row functions, aggregate functions, subqueries, and views, as well as advanced query topics. *ORACLE 12C: SQL, 3E* introduces the latest features and enhancements in 12c, from enhanced data types and invisible columns to new CROSS and OUTER APPLY methods for joins. To help readers transition to further studies, appendixes introduce SQL tuning, compare Oracle’s SQL syntax with other databases, and overview Oracle connection interface tools: SQL Developer and SQL Plus. Readers can trust *ORACLE 12C: SQL, 3E* to provide the knowledge for Oracle certification testing and the solid foundation for pursuing a career as a successful database administrator or developer. Business Associations Aug 20 2019 *Business Associations: A Systems Approach* is the first *Business Associations* casebook organized by function (decision-making, finance, investor litigation, investment transfer, etc.) instead of by entity type (partnerships, corporations, LLCs, etc.). Functional organization avoids repetition and makes full coverage of corporations, partnerships, LLCs, and limited partnerships possible in a four-, or even three-, credit course. The systems approach is the basis for several successful casebooks in other fields, most notably LoPucki, Warren and Lawless’s *Secured Transactions: A Systems Approach*. The approach focuses on the actions of the lawyers, businesspeople, and government administrators who apply law rather than merely on abstract law. *Business Associations: A Systems Approach* provides hundreds of realistic, fact-rich problems in legal practice settings. Students apply their new knowledge of law and how the systems work to advise hypothetical clients. The cases are recent, heavily edited, and rarely longer than five pages. Professors and students will benefit from: Full coverage of agency, corporations, partnerships, LLCs, limited partnerships and the role of legal entities in society Tables, figures, photos, and one cartoon Fundamental documents for Facebook and a hypothetical LLC (BKG Catalina) and operating agreement, which are also integrated into the text and problems Cleanly edited, easy-to-read cases Recent cases that illustrate modern business practices and reflect current law Organization by function, which reduces the repetition required in organization by entity type Modular organization, allowing the chapters to be taught in any order An approach that any kind of entity could be made to work like any other. Other books teach what kinds of entities to use in what situations. Fact-rich, realistic problems in practice settings An introductory assignment that provides an overview of the course Clear and direct examples and explanations, free of jargon and idioms that cause difficulty for students from other cultures. Great for LL.M.s, MJSs and foreign J.D.s! A detailed glossary

Python for Everybody Sep 25 2022 *Python for Everybody* is designed to introduce students to programming and software development through the lens of exploring data. You can think of the Python programming language as your tool to solve data problems that are beyond the capability of a spreadsheet. Python is an easy to use and easy to learn programming language that is freely available on Macintosh, Windows, or Linux computers. So once you learn Python you can use it for the rest of your career without needing to purchase any software. This book uses the Python 3 language. The earlier Python 2 version of this book is titled “Python for Informatics: Exploring Information”. There are free downloadable electronic copies of this book in various formats and supporting materials for the book at www.pythonlearn.com. The course materials are available to you under a Creative Commons License so you can adapt them to teach your own Python course.

E - Learning Modules Apr 08 2021 The term e-Learning is a neologism for CSCL systems that came about during the emergence of website e-learning modules. From an e-learning perspective, conventional e-learning systems were then based on instructional packets, which were delivered to students using assignments. Assignments were evaluated by the instructor. In contrast, the new e-learning places increased emphasis on social learning and use of social software such as blogs, wikis, podcasts and virtual worlds such as Second Life. This phenomenon has also been referred to as Long Tail Learning . E-learning by contrast to e-learning systems not based on CSCL, assumes that knowledge (as meaning and understanding) is socially constructed. Learning takes place through conversations about content and grounded interaction about problems and actions. Advocates of social learning claim that one of the best ways to learn something is to teach it to others. However, it should be noted that many early online courses, such as those developed by Murray Turoff and Starr Roxanne Hiltz in the 1970s and 80s at the New Jersey Institute of Technology, courses at the University of Guelph in Canada, the British Open University, and the online distance courses at the University of British Columbia (where Web CT, now incorporated into Blackboard Inc. was first developed), have always made heavy use of online discussion between students. Also, from the start, practitioners such as Harasim in 1995, have put heavy emphasis on the use of learning networks for knowledge construction, long before the term e-learning, let alone CSCL, was even considered. There is also an increased use of virtual classrooms (online presentations delivered live) as an online learning platform and classroom for a diverse set of education providers such as Minnesota State Colleges and Universities and Sagem, MN, School District. In addition to virtual classroom environments, social networks have become an important part of e-learning. Social networks have been used to foster online learning communities around subjects as diverse as test preparation and language education. Mobile Assisted Language Learning (MALL) is a term used to describe using handheld computers or cell phones to assist in language learning. Some feel, however, that schools have not caught up with the social networking trends. Few traditional educators promote social networking unless they are communicating with their own colleagues. DLR Associates consulting group first became interested in e-learning modules at the annual Distance Learning Conference held at the University of Maine. I decided to offer e-learning services, since we were already evolved with computer-assisted education techniques. DLR Associates had been involved with CAE since computers were first used in engineering education. It was our hope a trend could be started towards blended learning services, where computer-based activities were integrated with practical or classroom-based situations. Computational Fluid Dynamics Nov 15 2021 *Computational Fluid Dynamics* enables engineers to model and predict fluid flow in powerful, visually impressive ways and is one of the core engineering design tools, essential to the study and future work of many engineers. This textbook is designed to explicitly meet the needs engineering students taking a first course in CFD or computer-aided engineering. Fully course matched, with the most extensive and rigorous pedagogy and features of any book in the field, it is certain to be a key text. The only course text available specifically designed to give an applications-lead, commercial software oriented approach to understanding and using *Computational Fluid Dynamics (CFD)*. Meets the needs of all engineering disciplines that use CFD. The perfect CFD teaching resource: clear, straightforward text, step-by-step explanation of mathematical foundations, detailed worked examples, end-of-chapter knowledge check exercises, and homework assignment questions
