**Plunder of the Commons** Aug 22 2019 'One of the most important books I've read in years' Brian Eno We are losing the commons. Austerity and neoliberal policies have depleted our shared wealth; our national utilities have been sold off to foreign conglomerates, social housing is almost non-existent, our parks are cordoned off for private events and our national art galleries are sponsored by banks and oil companies. This plunder deprives us all of our common rights, recognized as far back as the Magna Carta and the Charter of the Forest of 1217, to share fairly and equitably in our public wealth. Guy Standing leads us through a new appraisal of the commons, stemming from the medieval concept of common land reserved in **Download Ebook By Garrett Hardin Living Within Limits Ecology Economics And Population Taboos 1st First Edition Hardcover Read Pdf Free**

ancient law from marauding barons, to his modern reappraisal of the resources we all hold in common - a brilliant new synthesis that crystallises quite how much public wealth has been redirected to the 1% in recent decades through the state-approved exploitation of everything from our land to our state housing, health and benefit systems, to our justice system, schools, newspapers and even the air we breathe. **Plunder of the Commons** proposes a charter for a new form of commoning, of remembering, guarding and sharing that which belongs to us all, to slash inequality and soothe our current political instability.

Sneezing Jesus Jul 13 2021 Are you ready to be human? Human. God. Two words that jar against each other and yet describe Jesus perfectly. Jesus was fully human and fully divine, which is extraordinary. But He was also ordinary in the most counterintuitive way: His life shows us what normal humanity is supposed to look like. Jesus came to earth to redeem humanity itself, and through Him, that redeemed humanity is available to us all. In *Sneezing Jesus*, Brian Hardin journeys through vivid Gospel stories, pointing to a revolutionary truth: If Jesus was a normal human living a normal human life, then His death and resurrection didn't just save our souls—it saves our humanity here and now.

**Faith and the Pursuit of Health** Dec 06 2020

Faith and the Pursuit of Health explores how Pentecostal Christians manage chronic illness in ways that sheds light on health disparities and social suffering in Samoa, a place where rates of obesity and related cardiometabolic disorders have reached population-wide levels. Pentecostals grapple with how to maintain the health of their congregants in an environment that fosters cardiometabolic disorders. They find ways to manage these forms of sickness and inequality through their churches and the friendships developed within these institutions. Examining how Pentecostal Christianity provides many Samoans with tools to manage day-to-day issues around health and sickness, Jessica Hardin argues for understanding the synergies between how Christianity and biomedicine practice chronicity.

This new 2018 edition of his prison-penned memoirs includes an introduction and footnotes by author and translator Damian Stevenson ('On the Shortness of Life') which help shed light on this most enigmatic of Old West legends.

[A Labour of Liberation](#) Jun 19 2019 Providing care to the sick is one of the most universal labours that exists across human societies. How do we understand the work that goes into this vital collective task? How do we arrange different forms of caregiving labour? How do we decide what forms of labour remain informal and unregulated, while others remains more controlled and institutionalised? What has led to the way we prioritise and the way we value caregiving labour types? This work explores the forms of labour - from the cognitive to the emotional, from the physical to the administrative - that go into contemporary healthcare, tracing the lineage of the hierarchies that have developed in alliance or complicity with state and capital. Through analysing the repercussions of these relationships on the care of the sick, the book questions the role of coercion and extraction in health work, and poses an argument for a more liberatory future for caregiving labour.

protect our interests or even our civil liberties? Is the current mood of public distrust justified or do we need to re-evaluate our understanding of trust in the global age? In this wide-ranging book, Russell Hardin sets out to dispel the myths surrounding the concept of trust in contemporary society and politics. He examines the growing literature on trust to analyze public concerns about declining levels of trust, both in our fellow citizens and in our governments and their officials. Hardin explores the various manifestations of trust and distrust in public life - from terrorism to the internet, social capital to representative democracy. He shows that while today's politicians may well be experiencing a decline in public confidence, this is nothing new; distrust in government characterized the work of leading liberal thinkers such as David Hume and James Madison. Their views, he contends, are as relevant today as they were in the eighteenth and nineteenth centuries and we should not, therefore, be distressed at the apparent distrust of twenty-first century government. On a personal level, Hardin contends that the world in which we live is much more diverse and interconnected than that of our forebears and this will logically result in higher levels of personal trust and distrust between individuals. Written by one of the world's leading authorities on trust, this book will be a valuable resource for students of government and politics, sociology and philosophy.

[Morality, Governance, and Social Institutions](#) Nov 05 2020 This book reflects on the research and career of political theorist Russell Hardin from scholars of Political Science, Philosophy, Sociology, Economics, and Law, among other disciplines. Contributions address core issues of political theory as perceived by Hardin, starting with his insistence that many of the basic institutions of modern society and their formative historical beginnings can be understood as proceeding primarily from the self-interested motives of the participants. Many of the contributions in this volume struggle with the constraints imposed on political theorizing by the idea of self-interested agents, or homo economicus. Some reject the idea as empirically unfounded. Others try to show that homo economicus is even more versatile than Hardin depicts. And yet others accept the constraints and work within them. But all pay tribute to the lasting intellectual contribution of Russell Hardin and the challenge he poses. The book should appeal to scholars and students interested in collective action, public choice and democracy, moral reasoning and its limits, constitutionalism, liberalism, conventions and coordination, trust, identity politics, social epistemology, and methods in politics philosophy.

[The Pistoleer](#) Oct 24 2019 Some called him a Texas hero. Some called him the Devil himself. But on one point they all agreed. While he was alive, John Wesley Hardin was the deadliest man in Texas. A novel of uncompromising depth and power from western master James Carlos Blake, called "one of the greatest chroniclers of the mythical American outlaw life" by Entertainment Weekly, The Pistoleer narrates the life of John Wesley Hardin, exposing the many different sides of a man who became a legend. For his forty-two years on this earth, Hardin's name was synonymous with outlaw. A

killer at fifteen, in the next few years he became skilled enough with his pistols to back down Wild Bill Hickock in the street. By the time the law caught up with Hardin when he was twenty-five, he had killed as many as forty men and been shot so many times that, it was said, he carried a pound of lead in his flesh. In jail he became a scholar, studying law books until he won himself freedom, and afterwards he tried to lead an upright life. It was not to be. By the time he was killed in 1895, Hardin was an anachronism—the last true gunfighter of the Old West. With each chapter told from a different character's perspective, The Pistoleer is a reading experience not to be missed.

[How Do You Know?](#) May 23 2022 How do ordinary people come to know or believe what they do? We need an account of this process to help explain why people act as they do. You might think I am acting irrationally--against my interest or my purpose--until you realize that what you know and what I know differ significantly. My actions, given my knowledge, might make eminently good sense. Of course, this pushes our problem back one stage to assess why someone knows or believes what they do. That is the focus of this book. Russell Hardin supposes that people are not usually going to act knowingly against their interests or other purposes. To try to understand how they have come to their knowledge or beliefs is therefore to be charitable in assessing their rationality. Hardin insists on such a charitable stance in the effort to understand others and their sometimes objectively perverse actions. Hardin presents an essentially economic account of what an individual can come to know and then applies this account to many areas of ordinary life: political participation, religious beliefs, popular knowledge of science, liberalism, culture, extremism, moral beliefs, and institutional knowledge. All of these can be enlightened by the supposition that people are attempting reasonable actions under the severe constraints of acquiring better knowledge when they face demands that far outstretch their possibilities.

dramatically changing the way we live in and manage our world. Our world itself, he writes, is in the dilemma of the lifeboat: it can only hold a certain number of people before it sinks--not everyone can be saved. The old idea of progress and limitless growth misses the point that the earth (and each part of it) has a limited carrying capacity; sentimentality should not cloud our ability to take necessary steps to limit population. But Hardin refutes the notion that goodwill and voluntary restraints will be enough. Instead, nations where population is growing must suffer the consequences alone. Too often, he writes, we operate on the faulty principle of shared costs matched with private profits. In Hardin's famous essay, "The Tragedy of the Commons," he showed how a village common pasture suffers from overgrazing because each villager puts as many cattle on it as possible--since the costs of grazing are shared by everyone, but the profits go to the individual. The metaphor applies to global ecology, he argues, making a powerful case for closed borders and an end to immigration from poor nations to rich ones. "The production of human beings is the result of very localized human actions; corrective action must be local....Globalizing the 'population problem' would only ensure that it would never be solved." Hardin does not shrink from the startling implications of his argument, as he criticizes the shipment of food to overpopulated regions and asserts that coercion in population control is inevitable. But he also proposes a free flow of information across boundaries, to allow each state to help itself. "The time-honored practice of pollute and move on is no longer acceptable," Hardin tells us. We now fill the globe, and we have no where else to go. In this powerful book, one of our leading ecological philosophers points out the hard choices we must make--and the solutions we have been afraid to consider.

This work is destined to be a valuable research resource for such topics as packing and covering problems, generalizations of the famous Thomson Problem, and classical potential theory in Rd. It features three chapters dealing with point distributions on the sphere, including an extensive treatment of Delsarte-Yudin-Levenshtein linear programming methods for lower bounding energy, a thorough treatment of Cohn-Kumar universality, and a comparison of 'popular methods' for uniformly distributing points on the two-dimensional sphere. Some unique features of the work are its treatment of Gauss-type kernels for periodic energy problems, its asymptotic analysis of minimizing point configurations for non-integrable Riesz potentials (the so-called Poppy-seed bagel theorems), its applications to the generation of non-structured grids of prescribed densities, and its closing chapter on optimal discrete measures for Chebyshev (polarization) problems.

**Indeterminacy and Society** Jan 19 2022 In simple action theory, when people choose between courses of action, they know what the outcome will be. When an individual is making a choice "against nature," such as switching on a light, that assumption may hold true. But in strategic interaction outcomes, indeterminacy is pervasive and often intractable. Whether one is choosing for oneself or making a choice about a policy matter, it is usually possible only to make a guess about the outcome, one based on anticipating what other actors will do. In this book Russell Hardin asserts, in his characteristically clear and uncompromising prose, "Indeterminacy in contexts of strategic interaction . . . Is an issue that is constantly swept under the rug because it is often disruptive to pristine social theory. But the theory is fake: the indeterminacy is real." In the course of the book, Hardin thus outlines the various ways in which theorists from Hobbes to Rawls have gone wrong in denying or ignoring indeterminacy, and suggests how social theories would be enhanced--and how certain problems could be resolved effectively or successfully--if they assumed from the beginning that indeterminacy was the normal state of affairs, not the exception. Representing a bold challenge to widely held theoretical assumptions and habits of thought, *Indeterminacy and Society* will be debated across a range of fields including politics, law, philosophy, economics, and business management.

**The Limits of Altruism** Aug 14 2021 *An Introduction to Population Geographies* Jul 21 2019 *An Introduction to Population Geographies* provides a foundation to the incredibly diverse, topical and interesting field of twenty-first-century population geography. It establishes the substantive concerns of the subdiscipline, acknowledges the sheer diversity of its approaches, key concepts and theories and engages with the resulting major areas of academic debate that stem from this richness. Written in an accessible style and assuming little prior knowledge of topics covered, yet drawing on a wide range of diverse academic literature, the book's particular originality comes from its extended definition of population geography that locates it firmly within the multiple geographies of the life course. Consequently, issues such as childhood and adulthood, family dynamics, ageing, everyday mobilities, morbidity and differential ability assume a prominent place alongside the classic population geography triumvirate of births, migrations and deaths. This broader framing of the field allows the book to address more holistically aspects of lives across space often provided little attention in current textbooks. Particular note is given to how these lives are shaped through hybrid social, biological and individual arenas of differential life course experience. By engaging with traditional quantitative perspectives and newer qualitative insights, the authors engage students from the quantitative macro scale of population to the micro individual scale. Aimed at higher-level undergraduate and graduate students, this introductory text provides a well-developed pedagogy, including case studies that illustrate theory, concepts and issues.

**Morality Within the Limits of Reason** Mar 21 2022 This provocative, lucidly written reconstruction of utilitarianism focuses on the practical constraints involved in ethical choice: information may be inadequate, and understanding of causes and effects may be limited. Good decision making may be especially constrained if other people are closely involved in determining an outcome. Hardin demonstrates that many of these structural issues can and should be distinguished from the thornier problems of utilitarian value theory, and he is able to show what kinds of moral conclusions we can reach within the limits of reason.
