The Greenberg Rapid Review Nov 22 2019 Written by an esteemed educator and founder of the renowned Chicago Review Course in Neurological Surgery(tm), this updated review reflects substantive content additions to the 8th edition. The two prior editions of the Rapid Review were must-have companions that fully leveraged the vast knowledge contained within Greenberg's legendary tome. Through repetition and spot-on questions, this book brings clarity to a specialty whose sheer depth and breadth presents comprehension and retention challenges. This book helps readers determine if they are retaining key data and information, thereby providing a robust self-assessment study tool for ABNS certification. The 7th companion generated glowing reviews, such as: "A wonderful example of how to turn the classic Greenberg text into a study guide rather than an encyclopedic reference to a young neurosurgeon" -AANS Young Neurosurgeons News Key Highlights: Question formats include fill in the blank, open-ended questions, true/false, matching, and identification of various elements in diagrams/figures Mnemonic devices, helpful hints, clinical pearls, and study charts aid in comprehension and long-term retention Greenberg chapter headings are used (e.g. 4.2.3), thereby providing clear-cut Handbook references This book is designed to help neurosurgical residents prepare for the ABNS primary examination and/or rounds. It will enable practicing neurosurgeons, neurologists, neuro-radiologists, and neuropathologists to develop a storehouse of knowledge required to efficaciously examine, analyze, diagnose, and treat neurosurgical patients.

Transform Nutrition West Africa rapid reviews: A resource bank Jul 19 2019 Decisionmakers (including implementers, policymakers, technical agencies) require accurate and relevant evidence by which to plan, develop, and implement nutrition and health programs in a timely fashion. They need to know the effectiveness of interventions and policies, how and in what settings these interventions work, and their cost-effectiveness. Systematic reviews are increasingly used to inform policy decisions and produce guidance for health systems. Production of systematic reviews, however, is often protracted, resource intensive, and incompatible with decision-making timelines; they can take one to two years to complete. Rapid reviews offer an alternative, rapid and timely approach to providing actionable and relevant evidence that can be used to inform decisions about health systems in both routine and emergency contexts. Rapid reviews are generated through a transparent, scientific, and reproducible method that preserves key principles of knowledge synthesis.

Crossing the Global Quality Chasm Jan 05 2021 In 2015, building on the advances of the Millennium Development Goals, the United Nations adopted Sustainable Development Goals that include an explicit commitment to achieve universal health coverage by 2030. However, enormous gaps remain between what is achievable in human health and where global health stands today, and progress has been both incomplete and unevenly distributed. In order to meet this goal, a deliberate and comprehensive effort is needed to improve the quality of health care services globally. *Crossing the Global Quality Chasm: Improving Health Care Worldwide* focuses on one particular shortfall in health care affecting global populations: defects in the quality of care. This study reviews the available evidence on the quality of care worldwide and makes recommendations to improve health care quality globally while expanding access to preventive and therapeutic services, with a focus in low-resource areas. *Crossing the Global Quality Chasm* emphasizes the organization and delivery of safe and effective care at the patient/provider interface. This study explores issues of access to services and commodities, effectiveness, safety, efficiency, and equity. Focusing on front line service delivery that can directly impact health outcomes for individuals and populations, this book will be an essential guide for key stakeholders, governments, donors, health systems, and others involved in health care.

Rapid Review of Medicine in Old Age Oct 14 2021 This book has two main purposes: formative case analysis and self-assessment of medicine in old age. It presents clinicians with a series of cases on which to base discussion of the investigation and management of patients. It also provides the trainee, or established doctor, with a medium to help prepare for post-graduate examinations and clinical practice. The authors have chosen 109 cases, a total of 250 questions/answers, illustrated by color photographs, diagrams, and tables. The cases cover the main modes of presentation of acute illness in old age, such as fall, confusion, incontinence, weight loss and immobility, with examples from all the major systems. These illustrate the complexity of diagnosis and treatment of medical illness in frail older people and the need to think widely and laterally when caring for such patients. The questions are mostly in best-of-five format to reflect the current style of multiple choice questions used in examination, though some are open questions as the basis for tutorials. Many of the clinical stems have been expanded to improve the educational function of the book and to test more rigorously the reader's deductive thinking.
