A Century of Electrical Engineering and Computer Science at MIT, 1882-1982

Jul 24 2019 Electrical engineering is a protean profession. Today the field embraces many disciplines that seem far removed from its roots in the telegraph, telephone, electric lamps, motors, and generators. To a remarkable extent, this chronicle of change and growth at a single institution is a capsule history of the discipline and profession of electrical engineering as it developed worldwide. Even when MIT was not leading the way, the department was usually quick to adapt to changing needs, goals, curricula, and research programs. What has remained constant throughout is the dynamic interaction of teaching and research, flexibility of administration, the interconnections with industrial progress and national priorities. The book's text and many photographs introduce readers to the renowned teachers and researchers who are still well known in engineering circles, among them: Vannevar Bush, Harold Hazen, Edward Bowles, Gordon Brown, Harold Edgerton, Ernst Guillemin, Arthur von Hippel, and Jay Forrester. The book covers the department's major areas of activity - electrical power systems, servomechanisms, circuit theory, communication theory, radar and microwaves (developed first at the famed Radiation Laboratory during World War II), insulation and dielectrics, electronics, acoustics, and computation. This rich history of accomplishments shows moreover that years before "Computer Science" was added to the department's name such pioneering results in computation and control as Vannevar Bush's Differential Analyzer, early cybernetic devices and numerically controlled servomechanisms, the Whirlwind computer, and the evolution of time-sharing computation had already been achieved. Karl Wildes has been associated with the Department of Electrical Engineering and Computer Science since the 1920s, and is now

Professor Emeritus. Nilo Lindgren, an electrical engineering graduate of MIT and professional scientific and technical journalist for many years, is at present affiliated with the Electric Power Research Institute in Palo Alto, California.

Computer Methods for Architects Oct 31 2022 Computer Methods for Architects deals with the use of computers in the architecture profession. The text explores where and how computers can and cannot help. The book begins with an explanation of how the majority of the architects around the world were once reluctant to use a computer. It then discusses how some architects improved and advanced the use of computers in the profession. The next part of the book discusses the advantages that a computer can offer an architect, as well as some disadvantages. The next chapter talks about how a computer can handle the files of an entire office. Discussions on the computer's database, proper selection of programs, and simulation techniques are also included in the book. The text finally talks about what the future may hold for computers and architects. This book caters to architects, as it talks about what a person in the field could encounter while using computers.

Blue Pelican Java Jul 28 2022 "Blue Pelican Java" is a somewhat unusual high school computer science textbook. Most computer science texts will begin with a section on the history of computers followed with a flurry of definitions that are just "so many words" to the average student. The approach here is to first give the student some experience upon which to hang the definitions that come later. The usual practice of introducing classes and objects is deferred until the student has a firm grasp of the fundamentals (loops, decision structures, etc). Thus, the beginning student is not overwhelmed by the simultaneous introduction of OOPs and the fundamentals. The book includes plenty of exercises (many in "contest" form), programming projects, and a huge appendix.

Covid By Numbers Mar 31 2020 'I couldn't imagine a better guidebook for making sense of a tragic and momentous time in our lives. Covid by Numbers is comprehensive yet concise, impeccably clear and always humane' Tim Harford How many people have died because of COVID-19? Which countries have been hit hardest by the virus? What are the benefits and harms of different vaccines? How does COVID-19 compare to the Spanish flu? How have the lockdown measures affected the economy, mental health and crime? This year we have been bombarded by statistics - seven day rolling averages, rates of infection, excess deaths. Never have numbers been more central to our national conversation, and never has it been more important that we think about them clearly. In the media and in their Observer column, Professor Sir David Spiegelhalter and RSS Statistical Ambassador Anthony Masters have interpreted these statistics, offering a vital public service by giving us the tools we need to make sense of the virus for ourselves and holding the government to account. In Covid by Numbers, they crunch the data on a year like no other, exposing the leading misconceptions about the virus and the vaccine, and answering our essential questions. This timely, concise and approachable book offers a rare depth of insight into one of the greatest upheavals in history, and a trustworthy guide to these most uncertain of times.

Computer Integrated Production Systems and Organizations Nov 27 2019 The Background to the Institute The NATO Advanced Study Institute (ASI) 'People and Computers - Applying an Anthropocentric Approach to Integrated Production Systems and Organisations' came about after the distribution of a NATO fact sheet to Brunel University, which described the funding of ASIs. The 'embryonic' director of the ASI brought this opportunity to the attention of the group of people, (some at Brunel and some from outside), who were together responsible for the teaching and management of the course in Computer Integrated Manufacturing (CIM) in Brunel's Department of Manufacturing and Engineering Systems. This course had been conceived in 1986 and was envisaged as a vehicle for teaching manufacturing engineering students the technology of information integration through project work. While the original idea of the course had also included the organisational aspects of CIM, the human factors questions were not considered. This shortcoming was recognised and the trial run of the course in 1988 contained some lectures on 'people' issues. The course team were therefore well prepared and keen to explore the People, Organisation and Technology (POT) aspects of computer integration, as applied to industrial production. A context was proposed which would allow the inclusion of people from many different backgrounds and which would open up time and space for reflection. The proposal to organise a NATO ASI was therefore welcomed by all concerned.

Social Class in the 21st Century Jul 16 2021 A fresh take on social class from the experts behind the BBC's 'Great British Class Survey'. Why does social class matter more than ever in Britain today? How has the meaning of class changed? What does this mean for social mobility and inequality? In this book Mike Savage and the team of sociologists responsible for the Great British Class Survey look beyond the labels to explore how and why our society is changing and what this means for the people who find themselves in the margins as well as in the centre. Their new conceptualization of class is based on the distribution of three kinds of capital - economic (inequalities in income and wealth), social (the different kinds of people we know) and cultural (the ways in which our leisure and cultural preferences are exclusive) - and provides incontrovertible evidence that class is as powerful and relevant today as it's ever been.

Computers and Languages Dec 29 2019 A global introduction to language technology and the areas of computer science where language technology plays a role. Surveyed in this volume are issues related to the parsing problem in the fields of natural languages, programming languages, and formal languages. Throughout the book attention is paid to the social forces which influenced the development of the various topics. Also illustrated are the development of the theory of language analysis, its role in compiler construction, and its role in computer applications with a natural language interface between men and machine. Parts of the material in this book have been used in courses on computational linguistics, computers and society, and formal approaches to languages.

From Canoe to Computer Oct 07 2020 The life ways of Native and other northern Canadian inhabitants and the animals they live with, respect, and use are featured in this book. The author describes the aboriginals (First Nations people) and other northern peoples historical and current involvement in the use, studies, and management of wildlife. Recommendations for the accelerated involvement of Native peoples in wildlife management are presented. In addition, interesting observations of the ways of life of northern animals and their populations are described. Details of long-term studies and management of problems with bears, wolves, beaver, elk, and other species, and their diseases and parasites, are highlighted as well as the resulting human politics. The continuation of recreational, subsistence, and commercial hunting are recommended and the need for development of complex management techniques are presented. Changes to wildlife management education are suggested.

Advances in Embedded Computer Vision Feb 08 2021 This illuminating collection offers a fresh look at the very latest advances in the field of embedded computer vision. Emerging areas covered by this comprehensive text/reference include the embedded realization of 3D vision technologies for a variety of applications, such as stereo cameras on mobile devices. Recent trends towards the development of small unmanned aerial vehicles (UAVs) with embedded image and video processing algorithms are also examined. Topics and features: discusses in detail three major success stories - the development of the optical mouse, vision for consumer robotics, and vision for automotive safety; reviews state-of-the-art research on embedded 3D vision, UAVs, automotive vision, mobile vision apps, and augmented reality; examines the potential of embedded computer vision in such cutting-edge areas as the Internet of Things, the mining of large data streams, and in computational sensing; describes historical successes, current implementations, and future challenges.

Maximum PC Sep 25 2019 Maximum PC is the magazine that every computer fanatic, PC gamer or content creator must read. Each and every issue is packed with punishing product reviews, insightful and innovative how-to stories and the illuminating technical articles that enthusiasts crave.

Parenting the First Twelve Years Jan 22 2022 Concrete, research-driven advice on humanity's oldest, hardest job Why is parenting so fraught and so difficult in today's society? There has never been a time when advice was so readily available, and yet there is also a prevailing sense that parents are getting it wrong. This book examines the arguments and counter-arguments

supported by research on how best to parent children, from birth to twelve years. By taking an impartial approach to the evidence and, by discussing case studies from across the world and from a number of academic disciplines, this book is designed to show how good parenting comes in many shapes and forms.

The Great Little College Jun 26 2022 Based on the recollections of Corpus alumni, 'The Great Little College' gives a students'-eye view of life in this community since 1945. It captures the highs and the lows, the surprises and absurdities of an intense and formative phase of young lives. Although seemingly timeless, it gives a vivid, intimate insight into how Corpus life changed with the arrival of women. These personal accounts provide a window into life at an Oxford College and highlight how the University has evolved and adapted over the last 70 years. As a top global university, Oxford has never been more important. Although the smallest of its constituent colleges, Corpus Christi has long been one of the most distinguished. Founded in 1517 as a 'hive' of scholarly activity, and admired by Erasmus, its more recent alumni range from John Keble to Isaiah Berlin, from Vikram Seth to David and Ed Miliband. Its intimate character and distinguished record have fostered a unique community, special even amongst its peers. 'The whole place felt like a secret garden.' - Nick Witney 'What a privilege, as well as monumental pleasure to have been there. One never really leaves the place.' - Ian Wylie

Computer Yearbook Dec 21 2021

The Pelican Brief May 14 2021 #1 NEW YORK TIMES BEST SELLER • In suburban Georgetown a killer's Reeboks whisper on the front floor of a posh home... In a seedy D.C. porno house a patron is swiftly garroted to death... The next day America learns that two of its Supreme Court justices have been assassinated. And in New Orleans, a young law student prepares a legal brief... To Darby Shaw it was no more than a legal shot in the dark, a brilliant guess. To the Washington establishment it was political dynamite. Suddenly Darby is witness to a murder—a murder intended for her. Going underground, she finds there is only one person she can trust—an ambitious reporter after a newsbreak hotter than Watergate—to help her piece together the deadly puzzle. Somewhere between the bayous of Louisiana and the White House's inner sanctums, a violent cover-up is being engineered. For someone has read Darby's brief. Someone who will stop at nothing to destroy the evidence of an unthinkable crime.

One Barrel at a Time Apr 12 2021 In April 2005, two days after my seventy-sixth birthday, I became the Protestant chaplain at California Correctional Center in Susanville, California. The warden hired me for the job of creating a faith-based rehabilitation program, taught by inmates, supported by unpaid outside volunteers. It was anticipated that it could be a rehabilitation program for the twenty-six state prisons in California, as well a challenge for the myriad jails and prisons throughout the United States. To overcome the warehousing model of incarcerating and housing inmates in prisons throughout most prison systems, it is imperative that inexpensive programs be developed to counteract the chilling effect of sparse and ineffective free-time support for the inmate population. California recidivism rates in state prisons exceed 80 percent. It is expected that its much the same across the United States. Something needs to

be done to counteract this, and the CCC model is one attempt to do it. Included in this book are anecdotal examples and testimonies that point to this possibility. The challenges, or barrels, related in this attempt to change the recidivism rate at one institution tell us it won't be easy. New ideas are hard to come by in prison; the old, and tried and failed to often have the upper hand in the operation of state prisons in California. . As you follow my story, you will see how and who are the advocates and foes of change in the way prisons are operated. The story told here can benefit the families of the more than one million inmates in the prisons and jails in America. It can provide insights into the prison life for the students in the correctional curriculums in the colleges and universities of America. If the book were read by the personnel in the administration of state prisons, they might be challenged to work to change the climate in their jails and prisons.

Fly on the Wall Jun 14 2021 Fly on The Wall is beyond cutting edge. The Technological background of the book is already causing a Paradigm Shift in this country's' defense systems. This What if? Scenario makes any reader shudder at the possibilities. No longer, can this be considered Science Fiction. It exists today, on a scale of which the magnitude of its affect is incalculable. As we speak, the world is being altered at Light speed. Until now, no one has chronicled a fictional story around it. Fly on The Wall is as groundbreaking as Orson Wells "War of the Worlds" was to our Great Grand Parents with one major difference: The assumptions are not fiction. They are fact. In the hands of a genius with no moral compass to guide him, the outcome spells catastrophe. The reader is taken on a journey with more twists and turns than a clothes dryer.
