My Life Sep 15 2021 Ben Carson grew up in the inner cities of Boston

and Detroit with his mother and brother. When his father deserted the family, Ben's mother worked several jobs to support her boys yet worked even harder to encourage them to get an education and follow their dreams. Ben's dreams nearly ended when his anger at being poor and the ridicule of a school mate caused him to snap; he lunged at the boy and cut him with a knife. That brush with attempted murder caused Carson to break down and ask God to turn him around. And turn him around he did. A poor student, Carson under the guidance of his mother and brother became the best student in his class, his school, and ultimately earned a scholarship to Yale. The next time he used a knife was as a neurosurgeon at Johns Hopkins Hospital where he pioneered surgery techniques that not only saved lives but miraculously gave countless children an amazing quality of life. My Life is the story of a young boy who could have remained trapped in poverty were it not for his mother's tough and sacrificial love, his own perseverance that he learned from her example, and his deep faith that called him to do great and mighty things. This book contains a new chapter about Dr. Carson's philosophies of serving one's country, becoming role models for people with disadvantaged backgrounds, using the talents God has given you, embracing what success really is, and believing, youths and adults alike, that with hard work and perseverance, "you can do it." And on May 4, 2015, Dr. Ben Carson declared himself a candidate for the Presidency of the United States of America.

Worship; Based on the Fear of God May 23 2022 Worship is important in establishing an intimate relationship with Jesus and God our Father. Dr. Davis explores the importance of the voice of the people, the name of Jesus, the use of music, along with individual and corporate worship. He also defines the difference between an expression of praise and an expression of worship. Romans 15:6 states: aEURoeThat you may with one mouth and one mind glorify the God and Father of our Lord Jesus Christ.aEUR This command encourages us to worship God so we

can experience the essence of the glory of I AM.

Edge Detection Methods Based on Generalized Type-2 Fuzzy Logic Mar 09 2021 In this book four new methods are proposed. In the first method the generalized type-2 fuzzy logic is combined with the morphological gradient technique. The second method combines the general type-2 fuzzy systems (GT2 FSs) and the Sobel operator; in the third approach the methodology based on Sobel operator and GT2 FSs is improved to be applied on color images. In the fourth approach, we proposed a novel edge detection method where, a digital image is converted a generalized type-2 fuzzy image. In this book it is also included a comparative study of type-1, interval type-2 and generalized type-2 fuzzy systems as tools to enhance edge detection in digital images when used in conjunction with the morphological gradient and the Sobel operator. The proposed generalized type-2 fuzzy edge detection methods were tested with benchmark images and synthetic images, in a grayscale and color format. Another contribution in this book is that the generalized type-2 fuzzy edge detector method is applied in the preprocessing phase of a face recognition system; where the recognition system is based on a monolithic neural network. The aim of this part of the book is to show the advantage of using a generalized type-2 fuzzy edge detector in pattern recognition applications. The main goal of using generalized type-2 fuzzy logic in edge detection applications is to provide them with the ability to handle uncertainty in processing real world images; otherwise, to demonstrate that a GT2 FS has a better performance than the edge detection methods based on type-1 and type-2 fuzzy logic systems.

Transatlantic Reflections on the Practice-Based PhD in Fine Art Nov 17 2021 Once the US was the only country in the world to offer a doctorate for studio artists, however the PhD in fine art disappeared after pressures established the MFA as the terminal degree for visual artists. Subsequently, the PhD in fine art emerged in the UK and is now offered by approximately 40 universities. Today the doctorate is offered in most English-speaking nations, much of the EU, and countries such as China and Brazil. Using historical, political, and social frameworks, this book investigates the evolution of the fine art doctorate in the UK, what the concept of a PhD means to practicing artists from the US, and why this degree disappeared in the US when it is so vigorously embraced in the UK and other countries. Data collected through in-depth interviews examine the perspectives of professional artists in the US who teach graduate level fine art. These interviews disclose conflicting attitudes toward this advanced degree and reveal the possibilities and challenges of developing a potential doctorate in studio art in the US.

Higher Education Landscape 2030 Sep 03 2020 This open access Springer Brief provides a systematic analysis of current trends and requirements in the areas of knowledge and competence in the context of the project "(A) Higher Education Digital (AHEAD)-International Horizon Scanning / Trend Analysis on Digital Higher Education." It examines the latest developments in learning theory, didactics, and digital-education technology in connection with an increasingly digitized higher education landscape. In turn, this analysis forms the basis for envisioning higher education in 2030. Here, four learning pathways are developed to provide a glimpse of higher education in 2030: Tamagotchi, a closed ecosystem that is built around individual students who enter the university soon after secondary education; Jenga, in which universities offer a solid foundation of knowledge to build on in later phases; Lego, where the course of study is not a monolithic unit, but consists of individually combined modules of different sizes; and Transformer, where students have already acquired their own professional identities and life experiences, which they integrate into their studies. In addition, innovative practice cases are presented to illustrate each learning path.

Nanostructured Materials based on Noble Metals for Advanced Biological Applications Jun 12 2021 The Special Issue "Nanostructured Materials Based on Noble Metals for Advanced Biological Applications" highlights the recent progress in gold and silver nanomaterials preparation/synthesis as well as their innovative applications in advanced applications, such as in nanomedicine and nanosensors. It is

nowadays generally accepted that nanostructured noble metals allow the production of highly competitive materials. In fact, a specific design and rather simple and reliable preparation techniques can be used to obtain optimized material uses and possibilities for their reusability. One expects amazing future developments for these nanotechnologies from research laboratories to key industrial areas. The Guest Editor and the MDPI staff are therefore pleased to offer this Special Issue to interested readers, including researchers, graduate and PhD students as well as postdoctoral researchers, but also to the entire community interested in the wide world of nanomaterials.

ANALYSIS OF RCC STRUCTURE BASED ON RACKING WALLS & BASE ISOLATION Oct 04 2020 In recent years considerable attention has been paid to research and development of structural control devices with particular emphasis on mitigation of wind and seismic response of buildings. Many vibration-control measures like passive, active, semi-active and hybrid vibration control methods have been developed. Passive vibration control keeps the building to remain essentially elastic during large earthquakes and has fundamental frequency lower than both its fixed base frequency and the dominant frequencies of ground motion. Base isolation is a passive vibration control system. Free vibration and forced vibration analysis was carried out on the framed structure by the use of computer program SAP 2000 v12.0.0 and validating the same experimentally. The results of the free vibration analysis like time period, frequency, mode shape and modal mass participating ratios of the framed structure were found out. From modal analysis the first mode time period of fixed base building is found to be 0.56 sec whereas the first mode period of isolated building is found to be 3.11sec (approximately 6 times the fixed-base period!). This value is away from the dominant spectral period range of design earthquake. Forced vibration analysis (non-linear time history analysis) was done to determine the response of framed structures and to find out the vibration control efficiency of framed structures using lead rubber bearing. Isolation bearings in this study are modelled by a bilinear model. Under favourable conditions, the isolation system reduces the interstorey drift in the superstructure by a factor of at least two and sometimes by a factor of at least five. Acceleration responses are also reduced in the structure by an amount of 55-75% although the amount of reduction depends upon the force deflection characteristic of the isolators. A better performance of the isolated structure with respect to the fixed base structure is also observed in floor displacements, base shear (75- 85% reduction), floor acceleration relative to the ground(less acceleration imparted

on each floor and their magnitude is approximately same in each floor), roof displacement. Introduction of horizontal flexibility at the base helps in proper energy dissipation at the base level thus reducing the seismic demand of the super structure to be considered during design. Keywords: Passive vibration control, Time history analysis, interstorey drift, yielded stiffness, Design basis earthquake.

Guiding Principles for Developing Dietary Reference Intakes Based on Chronic Disease Nov 05 2020 Since 1938 and 1941, nutrient intake recommendations have been issued to the public in Canada and the United States, respectively. Currently defined as the Dietary Reference Intakes (DRIs), these values are a set of standards established by consensus committees under the National Academies of Sciences, Engineering, and Medicine and used for planning and assessing diets of apparently healthy individuals and groups. In 2015, a multidisciplinary working group sponsored by the Canadian and U.S. government DRI steering committees convened to identify key scientific challenges encountered in the use of chronic disease endpoints to establish DRI values. Their report, Options for Basing Dietary Reference Intakes (DRIs) on Chronic Disease: Report from a Joint US-/Canadian-Sponsored Working Group, outlined and proposed ways to address conceptual and methodological challenges related to the work of future DRI Committees. This report assesses the options presented in the previous report and determines guiding principles for including chronic disease endpoints for food substances that will be used by future National Academies committees in establishing DRIs.

Design Considerations for Lightweight Space Radiators Based on Fabrication and Test Experience with a Carbon-carbon Composite Prototype Heat Pipe Jan 27 2020 This report discusses the design implications for spacecraft radiators made possible by the successful fabrication and proof-of-concept testing of a graphite-fiber-carbon-matrix composite (i.e. carbon-carbo (C-C)) heat pipe. The prototype heat pipe, or space radiator element, consists of a C-C composite shell with integrally woven fins. It has a thin-walled furnace-brazed metallic (Nb-1%Zr) liner with end caps for containment of the potassium working fluid. A short extension of this liner, at increased wall thickness beyond the C-C shell, forms the heat pipe evaporator section which is in thermal contact with the radiator fluid that needs to be cooled. From geometric and thermal transport properties of the C-C composite heat pipe tested, a specific radiator mass of 1.45 kg/m² can be derived. This is less than one-fourth the specific mass of

present day satellite radiators. The report also discusses the advantage of segmented space radiator designs utilizing heat pipe elements, or segments, in their survivability to micrometeoroid damage. This survivability is further raised by the use of condenser sections with attached fins, which also improve the radiation heat transfer rate. Since the problem of heat radiation from a fin does not lend itself to a closed analytical solution, a derivation of the governing differential equation and boundary conditions is given in appendix A, along with solutions for rectangular and parabolic fin profile geometries obtained by use of a finite difference computer code written by the author.

Statistical Inference Based on the likelihood Jun 24 2022 The Likelihood plays a key role in both introducing general notions of statistical theory, and in developing specific methods. This book introduces likelihood-based statistical theory and related methods from a classical viewpoint, and demonstrates how the main body of currently used statistical techniques can be generated from a few key concepts, in particular the likelihood. Focusing on those methods, which have both a solid theoretical background and practical relevance, the author gives formal justification of the methods used and provides numerical examples with real data.

The Book of Massively Epic Engineering Disasters Jun 19 2019 It's hands-on science with a capital "E"—for engineering. Beginning with the toppling of the Colossus of Rhodes, one of the seven wonders of the ancient world, to the destructive, laserlike sunbeams bouncing off London's infamous "Fryscraper" in 2013, here is an illustrated tour of the greatest engineering disasters in history, from the bestselling author of *The Book of Totally Irresponsible Science*. Each engineering disaster includes a simple, exciting experiment or two using everyday household items to explain the underlying science and put learning into action. Understand the Titanic's demise by sinking an ice-cube-tray ocean liner in the bathtub. Stomp on a tube of toothpaste to demonstrate what happens to non-Newtonian fluids under pressure—and how a ruptured tank sent a tsunami of molasses through the streets of

Boston in 1919. From why the Leaning Tower of Pisa leans to the fatal design flaw in the Sherman tank, here's a book of science at its most riveting.

Mousetronaut Dec 26 2019 A #1 New York Times bestseller “This little mouse may well inspire some big dreams.” –Kirkus Reviews “In this picture book based on the space shuttle Endeavor...Meteor is one of the smallest mice, but the most hardworking...the values of being small, useful, solving problems, and working hard—as opposed to being big and strong—will inspire young readers.” –School Library Journal “Inspired by this real-life mouse, Kelly's first children's book tells the story of Meteor, a lightly anthropomorphized rodent who turns his tininess into an advantage when an important key gets stuck in a crack between two monitors...textured images and vivid portraits that make it absolutely clear that space travel is a larger-than-life adventure.” –Publishers Weekly A heartwarming picture book tale of the power of the small, from bestselling author and retired NASA astronaut Commander Mark Kelly. Astronaut Mark Kelly flew with “mice-tronauts” on his first spaceflight aboard space shuttle Endeavour in 2001. Mousetronaut tells the story of a small mouse that wants nothing more than to travel to outer space. The little mouse works as hard as the bigger mice to show readiness for the mission . . . and is chosen for the flight! While in space, the astronauts are busy with their mission when disaster strikes—and only the smallest member of the crew can save the day. With lively illustrations by award-winning artist C. F. Payne, Mousetronaut is a charming tale of perseverance, courage, and the importance of the small!

Title Privacy and Data Protection based on the GDPR Apr 22 2022 Information about people is becoming increasingly valuable. Enabled by new technologies, organizations collect and process personal data on a large scale. Free flow of data across Europe is vital for the common market, but it also presents a clear risk to the fundamental rights of

individuals. This issue was addressed by the Council of the European Union and the European Parliament with the introduction of the General Data Protection Regulation (GDPR). For many organizations processing personal data, the GDPR came as a shock. Not so much its publication in the spring of 2016, but rather the articles that appeared about it in professional journals and newspapers leading to protests and unrest. "The heavy requirements of the law would cause very expensive measures in companies and organizations", was a concern. In addition, companies which failed to comply "would face draconian fines". This book is intended to explain where these requirements came from and to prove that the GDPR is not incomprehensible, that the principles are indeed remarkably easy to understand. It will help anyone in charge of, or involved in, the processing of personal data to take advantage of the innovative technologies in processing without being unduly hindered by the limitations of the GDPR. The many examples and references to EDPB (European Data Protection Board) publications, recent news articles and case law clarify the requirements of the law and make them accessible and understandable. "Leo's book can provide very effective support to you and your colleagues in reaching this understanding and applying it in practice." Fintan Swanton, Managing Director of Cygnus Consulting Ltd., Ireland.
