[Balance, Gait, and Falls](#) Jun 07 2020 Balance, Gait, and Falls, Volume 159 presents the latest information on sensorimotor anatomy, sensory integration, gravity and verticality, standing balance, balance perturbations, voluntary stepping and gait initiation, gait and gait adaptability, disorders of balance and gait that result from aging and neurological diseases. The book provides a brief overview of age-related changes in the structure and function of sensorimotor and central processes, with sections specifically devoted to Parkinson's disease, parkinsonism, cerebellar ataxia, stroke, corticobasal degeneration, multiple sclerosis, Huntington's disease, dystonia,

tremor, Alzheimer's disease, frontotemporal dementia, cerebral palsy, polio, motor neuron disease, brainstem lesions, spinal lesions, peripheral nerve disease, and psychogenic conditions. Diseases covered have a common structure comprising background and epidemiology, pathology, balance disorders, gait disorders, falls, therapies (including fall prevention), and future directions. Covers all aspects of basic and clinical research on disorders of balance and gait in neurological disease Presents a multidisciplinary review of balance and gait physiology, the epidemiology and natural history of balance and gait impairments in aging, and a broad range of neurological diseases Addresses impairments of

balance and gait for basic and clinical researchers in neuroscience, human movement science, physiotherapy and exercise physiology [The Staircase](#) Oct 24 2021 The first theoretical, historical, and scientific analysis of one of the most basic and universal building elements: the stair.

**The Injury Chart Book** Sep 30 2019 This publication seeks to provide a global overview of the nature and extent of injury mortality and morbidity in the form of user-friendly tables and charts. It is hoped that the graphical representation of the main patterns of the burden of disease due to injury will raise awareness of the importance of injuries as a public health issue and facilitate the implementation of effective prevention programs.

*Paper* Mar 05 2020

**Aging, Place, and Health** Sep 10 2020 *Aging, Place, and Health: A Global Perspective* examines the interplay of biological, social, and environmental factors affecting the health and well-being of aging individuals, their families, and communities. With a strong interdisciplinary focus, this book provides a clear, coherent structure to address the diversity of topics in this increasingly vital field. The second edition maintains the ecological approach using the same framework as in the first edition. The ecological model serves as a template for the organization of the book. The new edition provides a more global focus and introduces new topics such as the impact of technology. This edition also introduces a new co-editor as well as specific chapters prepared by leading experts in the field.

**WHO Global Report on Falls Prevention in**

**Older Age** Aug 02 2022 The WHO Falls Prevention for Active Ageing model provides an action plan for making progress in reducing the

prevalence of falls in the older adult population. By building on the three pillars of falls prevention, the model proposes specific strategies for: 1. Building awareness of the importance of falls prevention and treatment; 2. Improving the assessment of individual, environmental, and societal factors that increase the likelihood of falls; and 3. For facilitating the design and implementation of culturally appropriate, evidence-based interventions that will significantly reduce the number of falls among older persons. The model provides strategies and solutions that will require the engagement of multiple sectors of society. It is dependent on and consistent with the vision articulated in the WHO Active Ageing Policy Framework. Although not all of the awareness, assessment, and intervention strategies identified in the model apply equally well in all regions of the world, there are significant evidence-based strategies that can be effectively implemented in all regions and cultures. The degree to which progress will be made depends on to the success in integrating falls prevention strategies into the overall health and social care agendas globally. In order to do this effectively, it is necessary to identify and implement culturally appropriate, evidence-based policies and procedures. This requires multi-sectoral, collaborations, strong commitment to public and professional education, interaction based on evidence drawn from a variety of traditional, complementary, and alternative sources. Although the

understanding of the evidence-base is growing, there is much that is not yet understood. Thus, there is an urgent need for continued research in all areas of falls prevention and treatment in order to better understand the scope of the problem worldwide. In particular, more evidence of the cost-effectiveness of interconnections is needed to develop strategies that are most likely to be effective in specific setting and population sub-groups.

*Why Startups Fail* Feb 13 2021 If you want your startup to succeed, you need to understand why startups fail. “Whether you’re a first-time founder or looking to bring innovation into a corporate environment, *Why Startups Fail* is essential reading.”—Eric Ries, founder and CEO, LTSE, and New York Times bestselling author of *The Lean Startup* and *The Startup Way* Why do startups fail? That question caught Harvard Business School professor Tom Eisenmann by surprise when he realized he couldn’t answer it. So he launched a multiyear research project to find out. In *Why Startups Fail*, Eisenmann reveals his findings: six distinct patterns that account for the vast majority of startup failures.

- **Bad Bedfellows.** Startup success is thought to rest largely on the founder’s talents and instincts. But the wrong team, investors, or partners can sink a venture just as quickly.
- **False Starts.** In following the oft-cited advice to “fail fast” and to “launch before you’re ready,” founders risk wasting time and capital on the wrong solutions.
- **False Promises.** Success with early adopters can be

misleading and give founders unwarranted confidence to expand. • Speed Traps. Despite the pressure to “get big fast,” hypergrowth can spell disaster for even the most promising ventures. • Help Wanted. Rapidly scaling startups need lots of capital and talent, but they can make mistakes that leave them suddenly in short supply of both. • Cascading Miracles. Silicon Valley exhorts entrepreneurs to dream big. But the bigger the vision, the more things that can go wrong. Drawing on fascinating stories of ventures that failed to fulfill their early promise—from a home-furnishings retailer to a concierge dog-walking service, from a dating app to the inventor of a sophisticated social robot, from a fashion brand to a startup deploying a vast network of charging stations for electric vehicles—Eisenmann offers frameworks for detecting when a venture is vulnerable to these patterns, along with a wealth of strategies and tactics for avoiding them. A must-read for founders at any stage of their entrepreneurial journey, *Why Startups Fail* is not merely a guide to preventing failure but also a roadmap charting the path to startup success.

*Division of Land Research Technical Paper* Jan 15 2021

**Getting Things Done** Jan 03 2020 The book *Lifhack* calls “The Bible of business and personal productivity.” “A completely revised and updated edition of the blockbuster bestseller from ‘the personal productivity guru’”—Fast Company Since it was first

published almost fifteen years ago, David Allen’s *Getting Things Done* has become one of the most influential business books of its era, and the ultimate book on personal organization. “GTD” is now shorthand for an entire way of approaching professional and personal tasks, and has spawned an entire culture of websites, organizational tools, seminars, and offshoots. Allen has rewritten the book from start to finish, tweaking his classic text with important perspectives on the new workplace, and adding material that will make the book fresh and relevant for years to come. This new edition of *Getting Things Done* will be welcomed not only by its hundreds of thousands of existing fans but also by a whole new generation eager to adopt its proven principles.

**World Report on Child Injury Prevention** Jul 21 2021 Child injuries are largely absent from child survival initiatives presently on the global agenda. Through this report, the World Health Organization, the United Nations Children's Fund and many partners have set out to elevate child injury to a priority for the global public health and development communities. It should be seen as a complement to the UN Secretary-General's study on violence against children released in late 2006 (that report addressed violence-related or intentional injuries). Both reports suggest that child injury and violence prevention programs need to be integrated into child survival and other broad strategies focused on improving the lives of children. Evidence demonstrates the dramatic successes

in child injury prevention in countries which have made a concerted effort. These results make a case for increasing investments in human resources and institutional capacities. Implementing proven interventions could save more than a thousand children's lives a day.—p. vii.

**Exercise, Aging and Health** Jun 19 2021 Appropriate for professionals in gerontology, sports psychology, health psychology, physical education and social science programs that deal with older populations and community resources, this book first discusses the pros and cons of physical activity for older persons. It then explores the theoretical reasons for which older people do not pursue physical activity and how to overcome this reluctance. There is a model included, as well as implications for future social policy.

Medication-Related Falls in Older People Nov 12 2020 Comprising a single repository of knowledge and scientific evidence in the field, this book provides strategies to mitigate fall risk by providing information on the complex interactions between aging processes, co-morbid conditions and prescribed medications in older patients. Geriatric health is becoming a more prominent issue as the population ages, and balancing the beneficial effects of medication against the potential and real side-effects in these patients involves a deliberate and thoughtful task: physiologic aging, the accumulation of co-morbidities, and the use of drugs to manage various conditions and

symptoms generates a unique set of problems for each patient. Falls are a dreaded event in older people. The event can affect a person in a physical, and psychological manner, resulting in soft tissue and bony injury, fear of falling, and depression. The identification of and reduction in fall risks in older people is a worldwide concern, and reducing the incidence of falls is a ubiquitous quality measure of health care delivery. Heterogeneity amongst older people precludes a single solution. However, physicians and others involved in the care of geriatric patients will benefit from the presented insights into how medication use can be modified to limit its impact as a contributing factor.

Patient Safety and Quality Oct 04 2022 "Nurses play a vital role in improving the safety and quality of patient care -- not only in the hospital or ambulatory treatment facility, but also of community-based care and the care performed by family members. Nurses need know what proven techniques and interventions they can use to enhance patient outcomes. To address this need, the Agency for Healthcare Research and Quality (AHRQ), with additional funding from the Robert Wood Johnson Foundation, has prepared this comprehensive, 1,400-page, handbook for nurses on patient safety and quality -- Patient Safety and Quality: An Evidence-Based Handbook for Nurses. (AHRQ Publication No. 08-0043)."--Online AHRQ blurb, <http://www.ahrq.gov/qual/nursesfdbk>.

**Fixing Niagara Falls** Oct 31 2019 Since the

late nineteenth century, Niagara Falls has been heavily engineered to generate energy behind a flowing façade designed to appeal to tourists. Fixing Niagara Falls reveals the technological feats and cross-border politics that facilitated the transformation of one of the most important natural sites in North America. Daniel Macfarlane shows how this natural wonder is essentially a tap: huge tunnels around the reconfigured Falls channel the waters of the Niagara River, which ebb and flow according to the tourism calendar. This book offers a unique interdisciplinary and transborder perspective on how the Niagara landscape embodies the power of technology and nature.

Falls in Older People Sep 03 2022 Since the first edition of this very successful book was written to synthesise and review the enormous body of work covering falls in older people, there has been an even greater wealth of informative and promising studies designed to increase our understanding of risk factors and prevention strategies. This second edition, first published in 2007, is written in three parts: epidemiology, strategies for prevention, and future research directions. New material includes recent studies covering: balance studies using tripping, slipping and stepping paradigms; sensitivity and depth perception visual risk factors; neurophysiological research on automatic or reflex balance activities; and the roles of syncope, vitamin D, cataract surgery, health and safety education, and exercise programs. This edition will be an

invaluable update for clinicians, physiotherapists, occupational therapists, nurses, researchers, and all those working in community, hospital and residential or rehabilitation aged care settings.

**Stepping On: Building Confidence and Reducing Falls** May 19 2021 The Stepping On program is a community-based falls-prevention program that shows participants how to reduce falls, increase confidence and maintain personal independence. Originally developed in Australia, based on research and scientifically proven to work, the Stepping On program is now internationally recognised as best practice in falls prevention. The Stepping On manual is aimed at health professionals who work in the area of falls prevention with older people. It offers a step-by-step guide to running the seven-week group program, essential background information and resources, and handouts for group participants. This new edition has been thoroughly revised and redesigned to incorporate the latest research in falls prevention.

Falls and Their Prevention, an Issue of Clinics in Geriatric Medicine Sep 22 2021 This issue of Clinics in Geriatric Medicine, Guest Edited by Laurence Rubenstein, MD, MPH, and David Ganz, MD, PhD, will feature such article topics as: Epidemiology of Falls in Older Adults; Exercise for Fall Prevention; Cardiac Causes of Falls and their Treatment; Medications and Falls; Vision and Fall Prevention; Preventing Falls in the Hospital, and Public Health

Approach to Falls on a State and National Level.

**Guccione's Geriatric Physical Therapy E-Book** Dec 14 2020 Offering a comprehensive look at physical therapy science and practice, Guccione's Geriatric Physical Therapy, 4th Edition is a perfect resource for both students and practitioners alike. Year after year, this text is recommended as the primary preparatory resource for the Geriatric Physical Therapy Specialization exam. And this new fourth edition only gets better. Content is thoroughly revised to keep you up to date on the latest geriatric physical therapy protocols and conditions. Five new chapters are added to this edition to help you learn how to better manage common orthopedic, cardiopulmonary, and neurologic conditions; become familiar with functional outcomes and assessments; and better understand the psychosocial aspects of aging. In all, you can rely on Guccione's Geriatric Physical Therapy to help you effectively care for today's aging patient population. Comprehensive coverage of geriatric physical therapy prepares students and clinicians to provide thoughtful, evidence-based care for aging patients. Combination of foundational knowledge and clinically relevant information provides a meaningful background in how to effectively manage geriatric disorders Updated information reflects the most recent and relevant information on the Geriatric Clinical Specialty Exam. Standard APTA terminology prepares students for terms they

will hear in practice. Expert authorship ensures all information is authoritative, current, and clinically accurate. NEW! Thoroughly revised and updated content across all chapters keeps students up to date with the latest geriatric physical therapy protocols and conditions. NEW! References located at the end of each chapter point students toward credible external sources for further information. NEW! Treatment chapters guide students in managing common conditions in orthopedics, cardiopulmonary, and neurology. NEW! Chapter on functional outcomes and assessment lists relevant scores for the most frequently used tests. NEW! Chapter on psychosocial aspects of aging provides a well-rounded view of the social and mental conditions commonly affecting geriatric patients. NEW! Chapter on frailty covers a wide variety of interventions to optimize treatment. NEW! Enhanced eBook version is included with print purchase, allowing students to access all of the text, figures, and references from the book on a variety of devices. [Research and Practice for Fall Injury Control in the Workplace: Proceedings of International Conference on Fall Prevention and Protection](#) Dec 26 2021 Falls represent a serious hazard to workers in many industries. Workers who perform tasks at elevation—workers in the construction, structural metal working, and tree trimming industries, for example—are at risk of falls from heights, with frequently grave or even fatal consequences. Many more

workers, in nearly every industry, are subject to falls to floors, walkways or ground surfaces. These falls, characterized as fall on the same level, are responsible for well over half of nonfatal injuries that result in days away from work. The etiology of falls as injury-producing events is multi-factorial, and encompasses multiple mechanisms of exposure. Working at heights involves completely different fall risks than those found on workplace surfaces and floors. The different exposures represent serious safety risks in both cases, resulting in fatal and serious nonfatal injury. To address the various causes of multi-factorial events such as these, there needs to be wide-ranging and multidisciplinary injury-mitigation approaches provided to practitioners based on a wide variety of research methods. To advance our knowledge of occupational fall injuries, the International Conference on Fall Prevention and Protection (ICFPP), held in May of 2010, was convened to provide a forum for researchers from NIOSH, its stakeholders, and the community of fall-prevention specialists and experts to present research findings, recommendations and expert advice on the latest tools and methods to reduce the incidence of injury from falls. At the conference, a wide variety of research approaches and methods were presented, and these approaches reflected the multidisciplinary orientation of the different stakeholders in attendance, as well as the individual interests and expertise of

participating researchers. This document represents a wealth of knowledge from experts and informed stakeholders on the best way to understand, prevent, and control fall-related risk exposures. It is anticipated that these presentations will serve to bring together the communities of interest that attempt to prevent and ameliorate fall-related injuries, and will spur efforts that will continue in the form of joint and supported research investigations, research consortia, and informed dialogue in support of a common goal. NIOSH hopes to continue to sponsor forums for the presentation of methods and findings related to occupational fall injury protection and prevention in the future.

#### **Research Reports** Apr 17 2021

Falls in Older Persons May 31 2022 "In both hospitals and long-term care facilities it's the older patients and residents who are most prone to falling and most vulnerable to serious injury from a fall. Staff must constantly be on the alert for hazardous situations and know how to deal with falls. This easy-to-read guide provides just the right amount of information needed by health care staff to prevent and manage this common problem among older adults." "This book presents a wealth of practical recommendations, modifications, equipment, and resources that will improve the health and safety of older adult patients and long-term care residents."--BOOK JACKET.Title Summary field provided by Blackwell North America, Inc. All Rights Reserved

Falls and Cognition in Older Persons Mar 29 2022 Despite of the enormous efforts of researchers and clinicians to understand the pathophysiology of falls in older adults and establish preventive treatments, there is still a significant gap in our understanding and treating of this challenging syndrome, particularly when we focus in cognitively impaired older adults. Falls in older adults are a very common yet complex medical event, being the fifth leading cause of death and a main cause of insidious disability and nursing home placement in our world aging population. Importantly, falls in the cognitively impaired double the prevalence of the cognitively normal, affecting up of 60% of older adults with low cognition and increasing the risk of injuries. The past decade has witnessed an explosion of new knowledge in the role of cognitive processes into the falls mechanisms. This was also accompanied with clinical trials assessing the effect of improving cognition via pharmacological and non-pharmacologic approaches to prevent falls and related injuries. Unfortunately, this revolution in emerging interventions left a gap between clinician-scientists and researchers at academic centers where the new data had been generated and the practitioners who care for cognitively impaired patients with falls. Most advances are published in specialty journals of geriatric medicine, neurology, and rehabilitation. The aim of this book is to reduce this gap and to provide practical tools for fall prevention in

cognitively impaired populations. The proposed book is designed to present a comprehensive and state-of-the-art update that covers the pathophysiology, epidemiology, and clinical presentation of falls in cognitively impaired older adults. We additionally aim to reduce the knowledge gap in the association between cognitive processes and falls for practitioners from a translational perspective: from research evidence to clinical approach. We will address gaps and areas of uncertainty but also we will provide practical evidence-based guidelines for the assessment, approach, and treatment of falls in the cognitively impaired populations. This book is a unique contribution to the field. Existing textbooks on fall prevention focus in global approaches and only tangentially address the cognitive component of falls and not purposely address special populations and/or settings as residential care and nursing homes. Due to the expected increase of proportion of older adults with cognitive and mobility impairments, this book is also valuable for the whole spectrum of the health care of the elderly. By including a transdisciplinary perspective from geriatric medicine, rehabilitation and physiotherapy medicine, cognitive neurology, and public health, this book will provide a practical and useful resource with wide applicability in falls assessment and prevention.

**Evidence-Based Practices to Reduce Falls and Fall-Related Injuries Among Older Adults** Nov 05 2022 Falls and fall-related

injuries among older adults have emerged as serious global health concerns, which place a burden on individuals, their families, and greater society. As fall incidence rates increase alongside our globally aging population, fall-related mortality, hospitalizations, and costs are reaching never seen before heights. Because falls occur in clinical and community settings, additional efforts are needed to understand the intrinsic and extrinsic factors that cause falls among older adults; effective strategies to reduce fall-related risk; and the role of various professionals in interventions and efforts to prevent falls (e.g., nurses, physicians, physical therapists, occupational therapists, health educators, social workers, economists, policy makers). As such, this Research Topic sought articles that described interventions at the clinical, community, and/or policy level to prevent falls and related risk factors. Preference was given to articles related to multi-factorial, evidence-based interventions in clinical (e.g., hospitals, long-term care facilities, skilled nursing facilities, residential facilities) and community (e.g., senior centers, recreation facilities, faith-based organizations) settings. However, articles related to public health indicators and social determinants related to falls were also included based on their direct implications for evidence-based interventions and best practices.

*Research Report* Oct 12 2020

**Orthogeriatrics** Jan 27 2022 This new open access edition supported by the Fragility

Fracture Network aims at giving the widest possible dissemination on fragility fracture (especially hip fracture) management and notably in countries where this expertise is sorely needed. It has been extensively revised and updated by the experts of this network to provide a unique and reliable content in one single volume. Throughout the book, attention is given to the difficult question of how to provide best practice in countries where the discipline of geriatric medicine is not well established and resources for secondary prevention are scarce. The revised and updated chapters on the epidemiology of hip fractures, osteoporosis, sarcopenia, surgery, anaesthesia, medical management of frailty, peri-operative complications, rehabilitation and nursing are supplemented by six new chapters. These include an overview of the multidisciplinary approach to fragility fractures and new contributions on pre-hospital care, treatment in the emergency room, falls prevention, nutrition and systems for audit. The reader will have an exhaustive overview and will gain essential, practical knowledge on how best to manage fractures in elderly patients and how to develop clinical systems that do so reliably.

*Preventing Patient Falls* Mar 17 2021

Preventing Patient Falls presents the authoritative Morse Fall Scale for predicting the likelihood of a patient falling. The book is the culmination of the author's eight years of research into patient falls and what can be done to prevent them. Full guidance is given on

implementing the Morse Fall Scale within a comprehensive fall prevention programme. An extensive range of direct practice issues is tackled.

**Stepping On: Building Confidence and Reducing Falls 3rd edn** Apr 29 2022 The Stepping On program is a community-based falls-prevention program that shows participants how to reduce falls, increase confidence and maintain personal independence. Originally developed in Australia, based on research and scientifically proven to work, the Stepping On program is now internationally recognised as best practice in falls prevention. The Stepping On manual is aimed at health workers with a passion for aged care. It offers a step-by-step guide to running the seven-week group program, plus essential background information. Topics covered include understanding the risk of falls, identifying home hazards, the role of vision in causing and preventing falls, staying safe in public places, strength and balance exercises, and much more. The manual includes a guide to useful resources, handouts for group participants, and suggestions for recruitment and evaluation. This new edition has been thoroughly revised and redesigned to incorporate cutting-edge research, professional feedback, and over fifteen years' experience of running of the program. As well as the latest fall-prevention research, the revised manual contains an expanded section on working with culturally and linguistically diverse groups,

simplified exercises for participants to do at home, and new stories and illustrations. 'This is an invaluable manual incorporating the latest evidence for falls prevention in the community.' Professor Lyn March AM, University of Sydney and Royal North Shore Hospital, Sydney 'This new Stepping On manual will be a wonderful resource for many health professionals like myself who work with patients who have had falls and fractures. It is definitely my "go-to" resource in our very busy clinic!' Lillias Nairn, North Shore Ryde Health Service A range of handouts and supplementary materials are available for download. Please click on the Table of Contents tab for links to download the supplementary materials.

**Foreign Affairs Research Papers Available**

**How to Fall in Love with Anyone** Dec 02 2019 In 2014, 33-year-old Mandy Len Catron went on a date with an acquaintance. They decided to try an experiment: inspired by a study designed to create romantic feelings, Mandy and Mark spent the evening asking each other 36 increasingly intimate questions, wondering if it would lead to them falling in love. In *How to Fall in Love with Anyone*, this experiment is Catron's starting point for investigating what it means to love someone and to be loved, and how we present our love to the world. What makes love last? Can love ever

work the way it seems to in films, books and social media? Is there a "right" way to fall in love? In these candid, charming and wise essays, Catron blends memoir with cultural and social commentary on the psychology, biology, history and literature of love. *How to Fall in Love with Anyone* is a deeply personal, yet universal investigation into the one thing we all want—or think we want—more than anything. Includes "To Fall in Love with Anyone, Do This", one of the most popular essays to appear in the New York Times' "Modern Love" column "In our age of total romantic confusion, Mandy Len Catron is a voice of good sense, warm humor, and consoling wisdom. Through the lens of her own relationships, she teaches us—with a deft, convincing intelligence—some of the vital moves in the art of love." —Alain de Botton, internationally bestselling author of *How Proust Can Change Your Life* and *The Course of Love* MANDY LEN CATRON lives in Vancouver, British Columbia. Her writing has appeared in the New York Times and the Washington Post. She writes about love and love stories at The Love Story Project, and teaches English and creative writing at the University of British Columbia.

**Feature Papers "Age-Friendly Cities & Communities: State of the Art and Future Perspectives"** Jul 29 2019 The "Age-Friendly

Cities & Communities: States of the Art and Future Perspectives" publication presents contemporary, innovative, and insightful narratives, debates, and frameworks based on an international collection of papers from scholars spanning the fields of gerontology, social sciences, architecture, computer science, and gerontechnology. This extensive collection of papers aims to move the narrative and debates forward in this interdisciplinary field of age-friendly cities and communities.
