Potter's Pathology of the Fetus and Infant E-Book Apr 27 2020 This comprehensive reference addresses all aspects of fetal and neonatal pathology, including complicated pregnancies, multiple pregnancies, abortion, placental pathology, and disorders affecting the full-term neonate. A consistent organization allows for quick access to specific guidance, and nearly 2,500 illustrations - 2,350 in full color - depict conditions and abnormalities as they present in practice, facilitating diagnosis. An Image Bank on CD-ROM - new to this edition - features all of the illustrations from the 2-volume set, downloadable for presentations. Offers comprehensive coverage of all common and rare embryonic, fetal, and infant disorders in one source. Correlates clinical, pathologic, and genetic findings for each systemic disease. Emphasizes the genetic and molecular basis of birth defects. Features nearly 2,500 illustrations - 2,350 in full color - which depict each abnormality or condition as they present in practice. Presents practical information on autopsy techniques and protocols. Provides the latest guidance on molecular pathology, immunohistochemistry, DNA technology, and more. Offers an expanded discussion of developmental biology related to the pathogenesis of birth defects. Features user-friendly summary tables and diagnostic flow charts, making information quick and easy to find. Includes a CD-ROM featuring all of the illustrations from the 2-volume set.

Cytokines and Cell Homeostasis in the Gastrointestinal Tract Sep 20 2019 The gastrointestinal tract has a number of unique features. Its extensive surface is formed by a single layer of rapidly renewing cells, the intestinal epithelial cells. These cells are in contact with a number of other cell populations, including the largest part of the immune system, and with an excessive luminal antigen load, including vast numbers of bacteria. Furthermore two more organs, namely liver and pancreas, are part of the system. The rapid renewal of the epithelial layer, the interactions of different cell types, and the balance between cell proliferation and death, have been fascinating subjects of studies in recent years. Much has been learned, and cytokines have emerged as important mediators for all these interactions and homeostatic systems. This book, the proceedings of the Falk Symposium 113 on 'Cytokines and Cell Homeostasis in the Gastrointestinal Tract', held in Regensburg, Germany, 16-18 September 1999, provides a forum for basic scientists and interested clinicians to exchange ideas, to discuss concepts and to plan further studies.

Advanced Therapies in Pediatric Endocrinology and Diabetology May 21 2022 Dealing with current hot topics, this book aims to provide an update on advances in the treatment of endocrine disorders. The chapters cover innovative therapeutic approaches to type 1 diabetes, such as artificial pancreas and islet transplantation. Additionally, novel pharmacological interventions for patients with obesity and the metabolic syndrome, as well as with adrenal and gonadal disorders are provided. Furthermore, recent developments in growth-promoting therapies, such as the C-type natriuretic peptide analog to treat achondroplasia, as well as antioxidant and gene replacement therapies in patients with adrenoleukodystrophy, are described. Worldwide renowned experts share their experience and cutting edge research in Advanced Therapies in Pediatric Endocrinology and Diabetology, which makes it a useful and interesting resource for every pediatric endocrinologist, not only those active in clinical research, but also those involved in the management of children with endocrine diseases in daily practice.

New Fundamental Mathematics Oct 26 2022 "This combined book is written for the new Year 12 Mathematics Advanced + Extension 1 courses, which are being introduced into the NSW syllabus in 2020. This book has been written with two main objectives: it can be used as a textbook for classroom use, as well as a step-by-step resource to be used independently by students for their own self-study purposes. This book provides sufficiently clear explanations about each topic in the syllabus, with worked out examples and alternative methods, where applicable Questions are categorised by topic and graded from easy to hard, to help guide students in their learning. Each chapter also contains a set of review exercises and challenge problems, as well as fully worked solutions for each question. The review exercises will help consolidate students' skills and knowledge, while improving their competence and confidence. The book also features challenge problems. While they may extend beyond the syllabus, they are designed to provide extra stimulus for highly motivated students and increase confidence for the harder questions in the Higher School Certificate examination." -- Publisher's website.

Stem Cells Jun 17 2019 In this volume, the contributing authors from top labs involved in stem cell theranostics share the latest advances in the field of stem cell research. The book covers many aspects of stem cell-based therapy and the progress made toward stem cell therapy for liver, ocular, and cardiovascular diseases as well as cancer. This volume serves as a continuation of Prof. Khawaja Husnain Haider's previously edited books pertaining to stem cells-based therapeutics. This is an ideal book for researchers involved in drug development as well as regenerative medicine and stem cell-based therapy. The secondary audience includes graduate and postgraduate medical students, doctors, cellular pharmacology, drug industry, and researchers involved in using stem cells as ex-vivo disease models for drug development.
