Doing Things for Reasons Jun 07 2020 What exactly are the reasons we do things, and how are they related to the resulting actions? Bittner explores this question and proposes an answer: a reason is a response to that state of affairs. Elegantly written, this work is a substantial contribution to the fields of rationality, ethics, and action theory.

Nutrition Support for Athletic Performance Nov 12 2020 Athletes and their support personnel are constantly seeking evidence-informed recommendations to enhance athletic performance during competition and to optimize training-induced adaptations. Accordingly, nutritional and supplementation strategies are commonplace when seeking to achieve these aims, with such practices being implemented before, during, or after competition and/or training in a periodized manner. Performance nutrition is becoming increasingly specialized and needs to consider the diversity of athletes and the nature of the competitions. This Special Issue, Nutrition Support for Athletic Performance, describes recent advances in these areas.

Missions and Empire Jan 03 2020 The explosive expansion of Christianity in Africa and Asia during the last two centuries constitutes one of the most remarkable cultural transformations in the history of mankind. Because it coincided with the spread of European economic and political hegemony, it tends to be taken for granted that Christian missions went hand in hand with imperialism and colonial conquest. In this book historians survey the relationship between Christian missions and the British Empire from the seventeenth century to the 1960s and treat the subject thematically, rather than regionally or chronologically. Many of these themes are treated at length for the first time, relating the work of missions to language, medicine, anthropology, and decolonization. Other important chapters focus on the difficult relationship between missionaries and white settlers, women and mission, and the neglected role of the indigenous evangelists who did far more than European or North American missionaries to spread the Christian religion - belying the image of Christianity as the 'white man's religion'.

Handbook of Behavior, Food and Nutrition Aug 10 2020 This book disseminates current information pertaining to the modulatory effects of foods and other food substances on behavior and neurological pathways and, importantly, vice versa. This ranges from the neuroendocrine control of eating to the effects of life-threatening disease on eating behavior. The importance of this contribution to the scientific literature lies in the fact that food and eating are an essential component of cultural heritage but the effects of perturbations in the food/cognitive axis can be profound. The complex interrelationship between neuropsychological processing, diet, and behavioral outcome is explored within the context of the most contemporary psychobiological research in the area. This comprehensive psychobiology- and pathology-themed text examines the broad spectrum of diet, behavioral, and neuropsychological interactions from normative function to occurrences of severe and enduring psychopathological processes.
