Instrumentation Between Science, State and Industry Mar 05 2020 these. In this book, we appropriate their conception of research-technology, and ex tend it to many other phenomena which are less stable and less localized in time and space than the Zeeman/Cotton situation. In the following pages, we use the concept for instances where research activities are orientated primarily toward technologies which facilitate both the production of scientific knowledge and the production of other goods. In particular, we use the tenn for instances where instruments and meth ods· traverse numerous geographic and institutional boundaries; that is, fields dis tinctly different and distant from the instruments' and methods' initial focus. We suggest that instruments such as the ultra-centrifuge, and the trajectories of the men who devise such artefacts, diverge in an interesting way from other fonns of artefacts and careers in science, metrology and engineering with which students of science and technology are more familiar. The instrument systems developed by re search-technologists strike us as especially general, open-ended, and flexible. When tailored effectively, research-technology instruments potentially fit into many niches and serve a host of unrelated applications. Their multi-functional character distin guishes them from many other devices which are designed to address specific, nar rowly defined problems in a circumscribed arena in and outside of science. Research technology activities link universities, industry, public and private research or me trology establishments, instrument-making finns, consulting companies, the military, and metrological agencies. Research-technology practitioners do not follow the career path of the traditional academic or engineering professional.

The United Nations world water development report 2016: water and jobs Aug 02 2022 The United Nations World Water Assessment Programme (WWAP) is hosted and led by UNESCO. WWAP brings together the work of 31 UN-Water Members as well as 38 Partners to publish The United Nations World Water Development Report (WWDR) series. The annual World Water Development Reports focus on strategic water issues. UN-Water Members and Partners - all experts in their fields - contribute with latest findings on a specific theme. This edition of the World Water Development Report focuses on Water and Jobs and seeks to inform decision-makers, inside and outside the water community, about the importance of the water and jobs nexus for the social and economic development and environmental sustainability of countries, rich and poor. The importance of water for jobs across economies is such that this report could be subtitled No water - No jobs. Indeed, a great majority of jobs are dependent upon water, and therefore increasingly at risk under conditions of water scarcity. T

Surviving Unemployment: Staying Centered While Your World Turns Upside Down May 31 2022 Surviving Unemployment will help you at every turn of your unemployment experience. The book begins by helping you recover from your initial job loss trauma, then it moves onto inspiring your day to day activities, including finding and getting a job. Finally it provides relaxations and affirmations that are specifically written for the job hunter. When

you are unemployed it is not only your task to get a new job, but it is also your task to be content and confident during the time you are unemployed. This book is about not feeling alone and dreading the extra time that you are suddenly given, it is about feeling your best when you go on job interviews despite the fact that you really want the job and your inner negative voice is saying you're not qualified. In other words it is about living life mindfully, while you wait for your work life to start again.

Effective Documentation Jul 09 2020 "Best Collection of Essays", NCTE Awards for Excellence in Technical and Scientific Communication. Effective Documentation is a major sourcebook that offers technical writers, editors, teachers, and students of technical communication a wide variety of practical guidelines based on often hard to find research in the usability of printed and electronic media. The book's eighteen chapters provide a wealth of material on such topics of current interest as the writing of design manuals, research in cognitive psychology as applied to the design of user manuals, and the organizing of manuals for hierarchical software systems. Included are chapters by such well known scholars in the field as Philip Rubens, Robert Krull, Judith Ramey, and John Carroll. Effective Documentation reviews the advice offered by other "how to produce usable documentation" books, describing the different types of usability research and explaining the inherent biases of each type. It goes beyond the actual design of textual and/or electronic media to look at these designs in context, giving advice on effective management ("good management is a requisite of good writing"), on the relationship between document design and product design, and on how to find out who one's readers really are. Advances in the presentation of textual information are explained, with suggestions on how to improve the usability of individual sentences and the design of entire books. The concluding chapters discuss advances in the design and use of online information and offer valuable insights into the use of graphic information and the development and design of information communicated via electronic media. Stephen Doheny Farina is Assistant Professor of Technical Communication at Clarkson University. Effective Documentation is included in the Information Systems series, edited by Michael Lesk.

New Emerging Careers Jun 27 2019 This book focuses on 10 of the most promising new technologies and the careers that they will foster, picking up where the 1983 book, "Emerging Careers" by Norman Feingold, left off. The book talks about the work that must be done in new ways as technological breakthroughs open new applications. By looking first at the technologies and their current and anticipated applications, the book anticipates opportunities in the workplace. Each chapter provides an overview of an emerging technology, discusses employment opportunities created by it, and outlines career opportunities, with descriptions of specific jobs and details on education and training. Each chapter concludes with a selected bibliography of suggested reading and references, and names and addresses of organizations offering additional information or literature. The 10 careers profiled are the following: biotechnology careers; laser careers; robotic careers; information technology careers; telecommunications careers; information management careers; computer careers; aerospace careers; medical technology careers; and superconductivity technology careers. The final chapter addresses career decision making through self-knowledge, research and planning, and professional guidance. Seven appendixes provide information on work and careers in the future, emerging career fields, futuristic exercises, a high technology futuristic quiz, and an index of emerging career fields cited in the book. Rhetoric, Innovation, Technology Aug 22 2021 Improving the way that technology is transferred from laboratory to marketplace iscentral to improving American productivity and competitiveness in a global economy. In thisprovocative analysis, Stephen Doheny-Farina shows that the technical and commercial processes ofturning technologies into products are, in significant ways, communication processes. He exploresthe key role that technical communicators must play in the movement of technology from expertdesigners and developers to users. Several lengthy case studies illustrate the rhetorical issuesinvolved in technology transfers as well as the rhetorical barriers to their success.Doheny-Farinaargues that processes typically called information transfer and technology transfer are nottransfers at all but instead are series of personal constructions and reconstructions of knowledge,expertise, and technologies by the participants attempting to adapt technological innovations forsocial uses.Underscoring the rhetorical nature of any technology transfer, the case studies describethe powerful effect that a startup company's business plan can have on its future (including themany factors that surround the writing of a business plan), the rhetorical barriers to the transferof an experimental artificial heart from a university research hospital to a biomedical productsmanufacturer, and two compelling situations that call for the inclusion of technical writers in newproduct development from its inception.A final chapter focuses on the important elements in theeducation of technical communicators and an appendix discusses classroom applications and includes afictional case incorporating issues of intraorganizational barriers to collaboration in the newproduct development process.Stephen Doheny-Farina is Assistant Professor in the TechnicalCommunications Department at Clarkson University. His previous book, Effective Documentationreceived the 1989 Award for the Best Collection of Essays, the National Council of Teachers ofEnglish Awards for Scientific and Technical Communication.
