**Working with Goals in Psychotherapy and Counselling** Jan 03 2020 Recent evidence has shown that the successful setting of goals brings about positive outcomes in psychological therapy. Goals help to focus and direct clients' and therapists' attention in therapeutic work. They also engender hope and help energise clients. No longer are clients victims of their circumstances, but through goal setting they become people who have the potential to act towards and achieve their desired futures. Through the discussing and setting of goals, clients develop a deeper insight into what it is that they really want in life: a crucial first step towards being able to get there. Recent policies in both child and adult mental health services have supported the use of goals in therapy. However, the differing cultures, histories, psychologies, and philosophical assumptions of each form of therapy has brought about varying attitudes and approaches to goal setting. Working with Goals in Counselling and Psychotherapy brings the attitudes of all the major therapeutic orientations together in one volume. With examples from cognitive behaviour therapy, psychodynamic

therapy, humanistic therapy, interpersonal therapy, and systemic therapy Working with Goals in Counselling and Psychotherapy truly is the definitive guide for therapists seeking to work with goals in any of the psychological therapies.

**Research Methods in Clinical and Counselling Psychology** Dec 02 2019 Research Methods in Clinical and Counselling Psychology presents a practical description of the research process, taking readers sequentially through the basic steps of a project: groundwork, measurement, design, analysis and interpretation. It also addresses essential background issues, such as the underlying philosophy of the various research methods and the socio-political issues that arise in doing research in service settings. Clinical and counselling research methodology is currently developing rapidly, and psychologists are expanding their repertoire of methods. In this book the authors present a balanced appraisal of both traditional and emergent methods. They re-affirm the scientist-practitioner model: that clinical and counselling psychologists have a dual role as both clinicians and researchers. The authors argue that research embraces a broad range of activities which can be incorporated into everyday professional practice. The book is aimed at students and professionals who want to conduct their own research and those who simply want to understand published research better.

**Cognitive Psychodynamics as an Integrative Framework in Counselling Psychology and Psychotherapy** Mar 17 2021 This book proposes a novel method of combining the current approaches to counselling and psychotherapy into one coherent framework. The authors argue that the cognitive behavioural tradition (largely focused on thought patterns) and the psychodynamic approach (centred on the client's experience and relationships), can be successfully integrated with insights from cognitive neuroscience, to form a fruitful synthesis. In doing so they provide a perspective that will enable practitioners to more fully appreciate each client's unique inner world, based on their individual history and environment. The authors point towards the brain's innate ability to understand and learn from experience so as to direct the growth of that inner world. This book elaborates a method of tapping into this innate growth potential, so as to help clients move forward when they have become trapped in non-productive patterns or mental stalemates. It will provide fresh insights and a valuable resource for counselling psychologists, counsellors and psychotherapists, as well as for academics and students in these fields.

**Counselling Supervision in Context** Jul 29 2019 'The book is written in such a way as to challenge and educate through the use of exercises, scenarios and activities. Something it does rather well.... A well-written, practical and informative publication... of value to supervisees, supervisors and all those involved in counsellor and supervisor training?' - Counselling Psychology Review 'This book... argues that the social context is important for the individual client, supervisee and supervisor, as is the context in which the work and supervision are done... it is a clear, well-written and enjoyable book, containing helpful information for both supervisees and supervisors?' - Transformations, The PCSR Journal There is an increasing awareness of the impact of individual factors on therapeutic work, both with clients and with their counsellors in supervision, but the influence of social contexts on this work has been less clearly articulated. This book provides counsellors with practical information about supervising specific types of clients and in specific organizational settings. Part One addresses four essential aspects of the individual - race, gender, disability and sexual orientation, exploring their influence on the therapeutic relationship and the supervision of trainee and experienced counsellors. Part Two assesses the impact of the organizations where counselling takes place - how different kinds of settings affect work with clients and thus the work of supervision. By highlighting context as a potential source of difficulty for the client, the book encourages trainees and supervisors to look beyond the individual and avoid placing the burden of responsibility for problems upon the client.
