Real Estate, Construction and Economic Development in Emerging Market Economies Jan 11 2021 Real Estate, Construction and Economic Development in Emerging Market Economies examines the relationships between real estate and construction sectors and explores how each sector, and the relationships between them, affect economic development in emerging market economies (EMEs). Throughout the book, the international team of contributors discuss topics as diverse as real estate finance and investment, housing, property development, construction project management, valuation, sustainability and corporate real estate. In doing so the book demonstrates how the relationship between construction and real estate impacts on economic development in countries such as Argentina, Brazil, Colombia, China, Ghana, Nigeria, Turkey, Lithuania, Hungary and Slovenia. Topics include: the role of real estate brokerage in improving the living standards of citizens; the effect of a mineral boom on construction cycles, real estate values and the socio-economic conditions of people in boom towns and cities; corporate real estate management practices and how they affect economic growth; and the synergies between construction and real estate and how they, in turn, affect economic development. This book will be of interest to those studying and researching real estate, construction, development studies, urban economics and emerging market economies.

Customer-Centric Project Management Sep 30 2022 There has been a sea-change in the focus of organizations - whether private or public - away from a traditional product- or service-centricity towards customer-centricity and projects are just as much a part of that change. Projects must deliver value; projects must involve stakeholders, and Elizabeth Harrin and Phil Peplow demonstrate convincingly that stakeholders are the ones who get to decide what 'value' actually means. Customer-Centric Project Management is a short guide explaining what customer-centricity means in terms of how you work and its importance for project performance; using tools and processes to guide customer-centric thinking will help you see the results of engagement and demonstrate how things can improve, even on difficult projects. The text provides a straightforward implementation guide to moving your own business to a customer-centric way of working, using a model called Exceed and provides some guidance for ensuring that customer-centricity is sustainable and supported in the organization. This is a practical, rigorous and well-researched text. It draws on established models and uses the example of project implementation in a healthcare environment to demonstrate the impact of this significant way of thinking about value. The authors can't guarantee that the Exceed process will radically improve project success rates, and no process can. Adopting a customer-centric mindset and using the Exceed process to measure and monitor customer satisfaction will, however, help you move towards working with happier, more engaged stakeholders.

Software Project Management in a Changing World Jan 23 2022 By bringing together various current directions, Software Project Management in a Changing World focuses on how people and organizations can make their processes more change-adaptive. The selected chapters closely correspond to the project management knowledge areas introduced by the Project Management Body of Knowledge, including its extension for managing software projects. The contributions are grouped into four parts, preceded by a general introduction. Part I "Fundamentals" provides in-depth insights into fundamental topics including resource allocation, cost estimation and risk management. Part II "Supporting Areas" presents recent experiences and results related to the management of quality systems, knowledge, product portfolios and global and virtual software teams. Part III "New Paradigms" details new and evolving software-development practices including agile, distributed and open and inner-source development. Finally, Part IV "Emerging Techniques" introduces search-based techniques, social media, software process simulation and the efficient use of empirical data and their effects on software-management practices. This book will attract readers from both academia and practice with its excellent balance between new findings and experience of their usage in new contexts. Whenever appropriate, the presentation is based on evidence from empirical evaluation of the proposed approaches. For researchers and graduate students, it presents some of the latest methods and techniques to accommodate new challenges facing the discipline. For professionals, it serves as a source of inspiration for refining their project-management skills in new areas.

Project Sponsorship Feb 09 2021 The second edition of Project Sponsorship—which includes an Appendix with new case studies, expanded assessment tools, and templates—shows how project sponsors and project managers can develop the skills they need to manage successful projects. Randall L. Englund and Alfonso Bucero—experts in the field of project management—have written the definitive guide for educating all stakeholders on the nature of project sponsorship. They describe in detail the responsibilities of the project sponsor, from communications and liaison, selection and training, problem solving, mentoring, and feedback, to the review of project execution. The project sponsor and manager learn how to negotiate effectively with each other and the project team to achieve their commitments.

Project-Oriented Leadership Jul 29 2022 From the perspective of delivering successful projects, the value of a skilled project sponsor and project manager outweighs many other factors. Projects need leaders who can give them vision, identity, keep the stakeholders and the project team on board and make the difficult decisions that will enable the project to continue (or, if necessary, be terminated). These are human skills that don't necessarily feature large in the project management bodies of knowledge. Ralf Müller and Rodney Turner's Project-Oriented Leadership explains the key leadership models of managerial, intellectual and emotional leadership and shows how they can be applied within projects to lead processes, functions and people, and ensure an ethical and inclusive approach within projects and programs.

Cognitive Readiness in Project Teams Jun 27 2022 Issues surrounding business complexity plague organizations throughout the world. This situation is particularly true of the numerous complex projects and programs upon which organizations embark on a regular basis. Current project management processes and standards are based on Newtonian/Cartesian principles, such as linearity, reductionism, and single source problem causation. However, complex projects exhibit both Newtonian/Cartesian characteristics and complex systems characteristics, such as emergence, self-organization, non-linearity, non-reductionism, and multi-source problem causation. To conduct successful projects, complementary ways of approaching projects are required, and new competencies for those who manage projects and for those on project teams are required as well. There are a number of books available to help project managers and teams address the issue of systems behavior. However, there are none that approach complex projects from a neuroscience-based approach to human behavior and ambiguity. This book does exactly that in order to reduce project

complexity and thereby increase the probability of project success. Cognitive Readiness in Project Teams looks to the concept of cognitive readiness (CR), first developed by the United States Department of Defense to better prepare and manage teams of individuals in complex battlefield situations. Its intent is to make project managers and teams more focused, responsive, resilient and adaptive through self-mastery and the mastering of interpersonal relationships. It introduces a CR framework for project managers and teams. This framework has neuroscience fundamentals and theorems as the foundation for the three pillars of CR: mindfulness, emotional intelligence, and social intelligence. The book is a compendium of chapters written by renowned authors in the fields of project management, neuroscience, mindfulness, and emotional and social intelligence.

Story and Simulations for Serious Games Sep 26 2019 How to create a simulation where participants have a sense of freedom and personal control while still maintaining the structure necessary for an effective story is a difficult task indeed. This book examines how to create an engaging, effective story (necessary to teach participants), while relating practical considerations of building a simulation. It also looks at stories as classic ways of teaching and gathering knowledge and considers other theories of interactive narrative design such as synthetic story creation and management and participant-generated story experiences. It also discusses enabling technologies in artificial intelligence, synthetic characters design and development, speech recognition technology, 3D modelling, and the future of story-driven games. Story Driven Simulations reviews the existing efforts in this field as well as focusing on the recent efforts of Paramount Pictures and The Institute for Creative Technologies at the University of Southern California, where this expert author team created successful simulations for the U.S. Army, Department of Defense, as well as other educational simulations.

Construction and Building Research Oct 08 2020 Many areas of knowledge converge in the building industry and therefore research in this field necessarily involves an interdisciplinary approach. Effective research requires strong relation between a broad variety of scientific and technological domains and more conventional construction or craft processes, while also considering advanced management processes, where all the main actors permanently interact. This publication takes an interdisciplinary approach grouping various studies on the building industry chosen from among the works presented for the 2nd International Conference on Construction and Building Research. The papers examine aspects of materials and building systems; construction technology; energy and sustainability; construction management; heritage, refurbishment and conservation. The information contained within these pages may be of interest to researchers and practitioners in construction and building activities from the academic sphere, as well as public and private sectors.
