[Japanese Telecommunications](#) Nov 05 2020 Presenting a comprehensive survey of the telecommunications industry in Japan, Taplin and Wakui cover the different sectors of the industry – including mobile, broadband and satellite, whilst considering key questions such as the structure and economics of the industry, government policy, and international relations issues connected to the industry. The volume brings together unique analysis by renowned experts in the telecommunications field. One major overall problem is that, unlike many other industries, Japan has lagged behind other countries in telecommunications. Japanese Telecommunications considers why this should be so, showing how far this is attributable to an unmodernized industry structure, and assessing the measures being taken to address the problem. After over a decade of struggle, Japan has recorded rapid uptake of broadband, and Japanese advanced mobile services have become increasingly successful on a global scale. Japan has also undergone regulatory reform, and competition policy is now given top priority by government. Taplin and Wakui examine the most recent developments and provide signposts for the future.

Sapiens Jul 01 2020 New York Times Bestseller A Summer Reading Pick for President Barack Obama, Bill Gates, and Mark Zuckerberg From a renowned historian comes a groundbreaking narrative of humanity's creation and evolution—a #1 international bestseller—that explores the ways in which biology and history have defined us and enhanced our understanding of what it means to be “human.” One hundred thousand years ago, at least six different species of humans inhabited Earth. Yet today there is only one—homo sapiens. What happened to the others? And what may happen to us? Most books about the history of humanity pursue either a historical or a biological approach, but Dr. Yuval Noah Harari breaks the mold with this highly original book that begins about 70,000 years ago with the appearance of modern cognition. From examining the role evolving humans have played in the global ecosystem to charting the rise of empires, Sapiens integrates history and science to reconsider accepted narratives, connect past developments with contemporary concerns, and examine specific events within the context of larger ideas. Dr. Harari also compels us to look ahead, because over the last few decades humans have begun to bend laws of natural selection that have governed life for the past four billion years. We are acquiring the ability to design not only the world around us, but also ourselves. Where is this leading us, and what do we want to become? Featuring 27 photographs, 6 maps, and 25 illustrations/diagrams, this provocative and insightful work is sure to spark debate and is essential reading for aficionados of Jared Diamond, James Gleick, Matt Ridley, Robert Wright, and Sharon Moalem.

In Search of Julián Carrillo and Sonido 13 May 31 2020 In the 1920s, Mexican composer Julián Carrillo (1875-1965) developed a microtonal system he metaphorically called El Sonido 13 (The 13th Sound). Although his pioneering role as one of the first proponents of microtonality gave him a cult figure status among European avant-garde circles in the 1960s and 1970s, his music and legacy have remained largely ignored by scholars and critics. This book explores his ideas not only in relation to the historical moments of their inception but also in relation to the various cultural projects that kept them alive and resignified them into the 21st century.
