History of the Air Corps Tactical School, 1920-1940 Aug 25 2019 In the 1930s, the Air Corps Tactical School at Maxwell Field, Alabama, was the nurturing ground for American air doctrine. Those who studied and taught there were the same individuals who prepared America for war, and then led its airmen into combat.

**U-Boat 1906 onwards (all models)** May 03 2020 An insight into the design, construction and operation of the feared World War 2 German Type VIIC U-boat. The German Type VIIC U-boat, scourge of Allied shipping convoys during the Second World War, was the workhorse of the German U-boat force. With some 568 Type VIIs in use between 1940 and 1945 it was a potent fighting vessel that could hunt for long periods in the far reaches of the western and southern Atlantic. Centerpiece of the Haynes U-boat Owners' Workshop Manual is the sole surviving example of a Type VIIC U-boat, U-995, which is on display at the German Naval Memorial near Kiel in northern Germany.

International Fascism, 1919-45 Sep 06 2020 The essays that comprise this study of 20th-century fascism shift the focus away from the German and Italian models and towards the influence of fascist ideology within other countries.

Reviews of Accelerator Science and Technology May 27 2022 Particle accelerators are a major invention of the 20th century. In the last eight decades, they have evolved enormously and have fundamentally changed the way we live, think and work. Accelerators are the most powerful microscopes for viewing the tiniest inner structure of cells, genes, molecules, atoms and their constituents such as protons, neutrons, electrons, neutrinos and quarks. This opens up a whole new world for materials science, chemistry and molecular biology. Accelerators with megawatt beam power may ultimately solve a critical problem faced by our society, namely, the treatment of nuclear waste and the supply of an alternative type of energy. There are also tens of thousands of small accelerators all over the world. They are used every day for medical imaging, cancer therapy, radioisotope production, high-density chip-making, mass spectrometry, cargo x-ray/gamma-ray imaging, detection of explosives and illicit drugs, and weapons. This volume provides a comprehensive review of this driving and fascinating field. The poster (also available in 1118 x 406 mm size) which illustrates the history and development of particle accelerators from 1919 to the future can be purchased separately

*Fullerene Research 1985-1993* Nov 28 2019 This volume contains very carefully compiled material presenting bibliographic descriptions of approximately 3500 papers, with a computer-generated index on authors, subject headings, corporate addresses and journals. There are many on-line services available on fullerenes, but they serve mainly current-awareness functions; none of them is selectively complete and carefully indexed and none can replace a complete retrospective bibliography, which most researchers in the field would want to have on hand in their laboratories and offices. Contents: Foreword A Brief User's Guide to the Bibliography and the Indexes Bibliography Author Index Geographical and Corporate Index Partially Permuted Title Word Index A Collection of Statistical Tables and Charts Readership: Materials scientists, condensed matter scientists, engineers and chemists.

Electrons; Isomers; Symmetry "To assess the comprehensiveness of the work would be perhaps a larger project than its compilation, but one hopeful indicator is

that it even includes book reviews. Continuations are planned.” Science “It is hoped that the compilations will continue because they are of great interest to all participating in or even just entering fullerene research as well as to scholars of trends and fashions in scientific research. This is a beautifully produced volume, a visually pleasing addition to the Series whose inaugural volume has already been reviewed in these pages.” The Chemical Intelligencer
