**Positive Schooling and Child Development** Mar 03 2020 This volume discusses the importance of positive schooling in producing responsible and potentially productive adults. Students are generally more motivated to do well and to realize their full potential in schools that have a positive schooling climate, where they feel safe, included and supported. Nevertheless, the reality in today's schools is very different. This volume discusses the major challenges faced by children and adolescents in schools, including problems with curricula, safety issues, lack of inclusive policies, non-availability of teachers, ineffective teaching, insensitivity towards students' issues, improper evaluation methods, harmful disciplinary measures, and so on. Experts in child psychology and education discuss these issues at length in this volume and offer viable solutions for policymakers, school administrators, teachers and parents to make suitable changes and create a positive atmosphere in educational institutions. This volume further discusses the role of various stakeholders---school principals, teachers, counsellors and psychologists---in addressing these challenges. In addition, it raises other, emerging issues which have not been covered in previous volumes on this topic and offers evidence-based suggestions to address them. The intended readership of the volume is researchers and students of psychology, education, sociology, social work and public health, and school teachers, administrators and teacher-trainers.

**Learning to Teach Geography in the Secondary School** Jun 05 2020 Learning to Teach Geography in the Secondary School provides intending and practising teachers of geography with the practical skills to design, teach and evaluate varied and exciting lessons. *Homeschooling High School* Dec 12 2020 Prospective homeschoolers are parents looking for an alternative to the mainstream educational system for their offspring. But homeschooling children at high school level strikes fear into even the most dedicated of homeschoolers. They need information and answers to their questions. And with the current educational and unemployment problems in South Africa, young people need clear direction and guidance to help them achieve their goals. In addition to exploring the popular ways to gaining a recognised matric certificate outside the formal school system, Homeschooling High School also challenges readers to rethink their values, particularly the value they place on certification, and to consider some unconventional or alternative paths to success. In a clearly presented format, the book includes advice on legal matters, identifying appropriate courses, sourcing study material, tips on entrepreneurship, financing tertiary studies and the testimonies of successful homeschooled graduates. Homeschooling High School is a comprehensive guide to plotting a path through high school and beyond.

*Dictionary Use in Foreign Language Writing Exams* Nov 22 2021 This book provides an in-depth analysis of what happens when intermediate level learners of a foreign language use a bilingual dictionary when writing. Dictionaries are frequently promoted to people learning a foreign language. Nevertheless, teachers often talk about their students' inability to use dictionaries properly, especially when they write, and this can be problematic. This book paints a comprehensive picture of the differences a dictionary makes and brings out the implications for language learning, teaching, and testing practices. It draws on research in which participants in three studies took writing tests in two test conditions □ with and without a dictionary. They were also asked what they thought about the two test types. Their performances and opinions were analyzed in a variety of ways. Conclusions from the data highlight some of the practical issues to be kept in mind if we want to help foreign language learners to use bilingual dictionaries effectively when writing.

**Understanding Assessment** Jan 13 2021 This is the first title in this new series, which is aimed principally at secondary PGCE and BAEd students and school- and HEI-based tutors. Each book provides a digest of the central issues around a particular topic or issues, grounded in or supported by examples of good practice, with suggestions for further reading, study and investigation. The books are not intended as 'how to' books, but rather as books which will help students and teachers to explore and understand critical theoretical issues in ways that are challenging, that invite critical reappraisals of taken-for-granted practices and perceptions, and that provide appropriate links between theory and practice. Issues related to equal opportunities and special needs are included in each separate volume. There are boxes of questions, 'think abouts', further reading, and bulleted summary lists for the reader. This book is written specifically for teachers-in-training which will clarify the 'big picture' of monitoring and assessment and makes the crucial distinctions in this large (and still taken-for-granted) field. The authors have written widely on assessment matters and have also worked in various capacities for the QCA (and its former manifestations). They are also engaged in initial teacher education and so know the level and market extremely well.

**Statutes and Ordinances of the University of Cambridge 2004** Apr 03 2020 This is the latest updated edition of the University of Cambridge's official statutes and Ordinances.

**Secondary School External Examination Systems** Mar 15 2021 Summative assessment has been a contentious issue in educational circles for several decades, particularly high-stakes assessment events which arise at various junctures of the school cycle, especially those at the end of it. The French Baccalaureat and English A-Levels and their numerous clones throughout the francophone and anglophone worlds are household names and represent milestone events in people's lives, as their outcomes are principal determinants of young people's future prospects. These examinations are external--they are devised, conducted and processed by agencies outside the schools, usually ministerial examination units. As such, they act as 'blind' arbiters of student achievement, providing the proverbial 'level playing field' which ensures the comparability of outcomes. In the pyramidal school structures of yesteryear, examinations acted as filters, regulating the progression of pupils to subsequent tiers of formal education. Exit points occurred from primary school level up, from where unsuccessful candidates could enter the labour force and/or embark on occupationally specific further education and training. With the modernisation of the labour market and an ever-higher social demand for access to higher levels of formal education, the filtering function of examinations at lower levels of schooling has been gradually eroded, while burgeoning numbers of students at the upper secondary level have brought about reforms that include curricular diversification and sometimes radical overhauls of terminating assessment systems (including the modification and, in some instances, abandonment of external examinations). This edited volume brings together the experiences of twenty examination systems from around the world to show how these dynamic entities have adapted over time to the changing context of schooling. Following an introduction by Stephen P. Heyneman of World Bank repute, there are sixteen chapters presenting Country Case Studies, which have been written up under common subheadings, thereby highlighting the comparative nature of the work and facilitating cross-referencing. The subsequent four chapters elaborate on the theme of 'external examinations beyond national borders', including a contribution by the International Baccalaureate Organisation. A defining feature of the work is the attention it pays to what it calls the 'nuts and bolts' of external examinations, from question-setting to grading procedures. These are, it is argued, instrumental in nurturing and maintaining public confidence in external examinations. The book will be of immense value to people involved in educational policy studies, especially strategic educational planning, as well as those directly concerned with formal assessment. The work has been written to appeal to a wide audience of informed persons--it is accessible to teachers and interested laypeople, as well as to academics."

**Educational Attainment and Society** Mar 27 2022 Sophisticated monograph focussing on attainment at the end of secondary/high school education (and the interface with tertiary education). Combines re-analysis of secondary literature (including official statistics, institutional histories, interview data) and analysis of qualitative and quantitative primary research using descriptive and inferential statistics, value-added analysis and grounded theory. The results show the significance and weakness of both the mid-twentieth century classic analyses of social class and the late-twentieth century feminist approaches. Shows how a joint consideration of social issues, in particular of gender and social stratification, produce a powerful model for explaining attainment with important implications for policy on (a) boys' underachievement and (b) participation in higher education.

**Public Examinations Examined** Jul 31 2022 High-stakes public examinations exert a dominant influence in most education systems. They affect both teacher and student behavior, especially at the middle and upper levels of secondary education. The content of past examinations tends to dictate what is taught and how it is taught and, more important, what is learned and how it is learned. By changing aspects of these examinations, especially their content and format, education systems can have a strong positive impact on teacher behavior and student learning, help raise student achievement levels, and better prepare students for tertiary-level education and for employment. Examination agencies, many of which have followed the same procedures over decades, can learn from the successes and failures of other systems. This book addresses current issues related to the development, administration, scoring, and usage of these high-stakes public examinations, identifying key issues and problems related to examinations in many emerging market economies as well as in advanced economies. The book's primary audience consists of public examination officials on national, regional, and state examination boards, but the book should also be of interest to senior education policy makers concerned with certification and learning achievement standards, to academics and researchers interested in educational assessment, to governmental and education agencies responsible for student selection, and to professionals at development organizations. "This extremely well-written and comprehensive book offers a timely review of the diversity of public examination practices worldwide; of the tensions between examinations and learning; and of the technical expertise involved in the creation of valid, reliable, and fair assessments. It reminds us that as "the diploma disease" takes hold with an ever-greater intensity at every stage of education worldwide, and the commercial business of testing flourishes, those concerned with educational quality and meaningful learning must be on guard to prevent the assessment tail wagging the educational dog."? Angela W. Little, Professor Emerita, Institute of Education, University College London "This book is very well structured and written and draws on the authors' remarkable global knowledge across countries and histories. It will be a great asset both to administrators responsible for examinations and to academics and other professionals who seek to understand the nature and impact of examinations of different types and in different settings."? Mark Bray, UNESCO Chair Professor of Comparative Education, University of Hong Kong; and former Director, UNESCO International Institute for Educational Planning "I am sure that Public Examinations Examined, which thoroughly analyzes the practice of public examinations in different countries and makes profound and well-grounded conclusions, will arouse very great interest and will serve to further improve public examinations."? Victor Bolotov, Distinguished Professor, Higher School of Economics, National Research University, Moscow; member, Russian Academy of Education; and former Deputy Minister of Education, Russian Federation

**Education under siege** Oct 22 2021 In Education under Siege, Peter Mortimore considers the UK education system as it is and as it might be. Concluding that the United Kingdom has some of the best teachers in the world but one of the most muddled systems, Mortimore proposes radical changes to help all British schools become good schools. He argues that the government should outlaw selection practices, integrate private schools into the state system, and establish processes to ensure that each school has effective teachers and a fair balance of students who learn easily and those who do not. In a concluding call to action, he asks readers who share his concerns to demand that politicians alter the course of education policy.

**Business, Economics and Enterprise** Jan 25 2022 This book is for newly qualified teachers and PGCE students of business education and economics. It covers the training standards for NQTS but goes beyond this with a focus on the subject expertise they bring into teaching.

**Examination Physical Education** Aug 27 2019 In recent decades physical education has moved from the margins, redefining itself as an academic subject. An important component of this transformation has been the introduction of high-stakes examinations at key points in a student's school career and the emergence of 'examination physical education' as the dominant paradigm in many educational systems around the world. This book is the first to explore the growing international literature on examination physical education and draw on research to extend the political, academic and professional debates around the subject to explore its limitations and possibilities. Addressing key topics such as curriculum development, assessment methods, and teacher education, it seeks to assess how our existing knowledge of examination physical education can be best translated into pedagogical practice in the classroom. Complementing other texts in the Routledge Studies in Physical Education and Youth Sport Series, it makes an original and informed contribution to current discussions of physical education. Examination Physical Education: Policy, Practice and Possibilities is important reading for any student, researcher or teacher educator with an interest in physical education, sports pedagogy and education policy.

**Dictionary of British Education** May 29 2022 This is an up-to-date guide for teachers and parents, administrators, governors, students and others to help them find their way about the increasingly complex world of education. The main section provides a dictionary that is more than a simple set of definitions: many words in education have been put into some kind of historical context to become fully meaningful. The second part gives some important landmarks from the nineteenth century to the present time, and also provides a list of political heads of education since state education was established. The final section is devoted to a list of acronyms and abbreviations, both of which have been the subject of multiple definitions in recent years.
