EBOOK: Mental Health And Well Being In Later Life May 15 2021 "This book's main contribution ... is to say to us all there is no single solution, no magic bullet, no instant cure, for the discomforts and illnesses of older age, and that not all ageing is comfortable. But it also tells us that it is in our control to do something about much of this, that older people's mental well-being could be vastly improved, and that public policy, and private attitudes, need to change. I hope that it is as influential as it deserves to be." Taken from the foreword by Baroness Julia Neuberger, Former Chief Executive of the King's Fund and author of 'Not Dead Yet' Mental health issues amongst older adults are becoming ever more prevalent. This fascinating book looks broadly at the mental health and well being issues that affect adults in later life. Taking a holistic approach to mental health and mental health promotion, the book explores the debates around what is meant by mental health and mental illness and the wider social determinants of mental health. All chapters have a common thread running through them – each of which was identified as being a key theme for mental health and well-being by adults in later life. Among them are issues relating to: Gender Ethnicity Societal diversity Poverty Class Cultural differences A range of examples from the UK and other countries, along with insights gained from older people's own perspectives, are used to emphasise the evidence base for effective interventions to promote mental health. Case studies, vignettes and quotes demonstrate how social theory and principles of health promotion can be effectively applied to improve practice. Mental Health and Well Being in Later Life is key reading for those working or intending to work in public health, health promotion and health and social care professions, especially those who work with older people.

Margaret McLoone, Sligo Institute of Technology, Ireland "Steve Robertson has written a valuable book that will serve as an excellent introduction to social science perspectives on the links between masculinities and men's health ... Depression - a Nurse's Experience Dec 22 2021 Veronica Burton's first experience of depression came as a teenager. Following a ten year remission, during which she gained her general nursing qualification and completed her Special and Intensive Nursing of the Newborn course, work-related events precipitated a depressive relapse that has lasted to the present day. Since her retirement on medical grounds, she has campaigned against prejudice by nurses toward other nurses - including mental health nurses - who need psychological support of any kind. This book recounts the author's experiences of major depression, hospital admissions and treatments including medication, ECT and 'talking treatments'. It discusses the care given by medical and nursing staff and social and medical prejudices against those with psychiatric illnesses from a medical practitioner's perspective. Like stumbling on a secret room in a familiar building. In illuminating these previously inaccessible corners of her illness experience, she forces me to challenge my own taken-for-granted version of her history. Familiar territory seen from another perspective suddenly seems perturbing. As psychiatrists, too often we are drawn into seeing people through a lens of illness, as if this was their only identity. A Veronica Burton's Psychiatrist Nick Rose in his Postscript

Written with healthcare managers, professionals and students in mind, it provides an accessible and evidence-based guide to healthcare systems, services, organizations and management. Key areas covered include: • Structure and delivery of healthcare services in the international context, including mental health, acute care, primary care, chronic disease and integrated care • Allocating resources for healthcare: setting and managing priorities • Health technologies, research and innovation • Global health policy: governing health systems across borders • Patient and public involvement in healthcare • Healthcare governance and performance This third edition has been significantly rewritten, with 10 new contributors and a new chapter structure designed to better support learning, practical application and further study. Healthcare Management is essential research-based reading for students, teachers and healthcare professionals involved in management, research and health policy making. "Walshe and Smith have assembled an invaluable introduction to healthcare management and health systems. With their fellow authors, they provide a comprehensive review of a range of issues related to the funding and provision of care, and how services are organised and managed. Now in its third edition, Healthcare Management has been updated and revised to meet the needs of teachers and students alike." Professor Chris Ham, Chief Executive, The King's Fund, UK "This book covers the main areas of knowledge which managers need, and gives tools for thinking and empirical examples relevant to current challenges. Evidence based management might not always be possible, but this book gives a way for a manager to become research-informed and therefore more effective. This third edition of the book is even more relevant internationally and improved to help readers apply the ideas to their situation." Professor John Øvretveit, Director of Research, LIME/MMC, The Karolinska Institute, Sweden "No-one learns to be a manager in a classroom or from a book, but books that take this disclaimer as their starting point are indispensable. Walshe and Smith (and their fellow authors) invite their audience (healthcare managers, healthcare policy makers and postgraduate

students, taking courses in healthcare management) to critically combine experiential learning with academic learning and to acquire knowledge from both practice and theory. By doing so, they have found the third way between the advocates of evidence-based management and their critics." Dr. Jan-Kees Helderma, Associate Professor in Public Administration, Institute for Management Research, Radboud University, Nijmegen, the Netherlands
