[RSPB Pocket Nature Wildlife of Britain](#) Oct 23 2021 Discover over 1,000 species of animal, plant and fungi found in Britain From the humming-bird Hawk moth to the False Deathcap Fungi, spot common British animal, plant and fungi species with this guide. In-situ photographs and no nonsense notes will help you identify them in the field quickly and accurately. Maps show you what animals, plants and fungi to find where and species are categorised so you can plan your spotting and make the most of your surroundings, whether you are on a holiday browse or serious quest. An ideal guide for all the family.

[Bracket 2](#) Nov 04 2022 From soft politics, soft power and soft spaces to fluid territories, software and soft programming, Bracket 2 unpacks the use and role of responsive, indeterminate, flexible, and immaterial systems in design. In an era of declared crises--economic, ecological and climatic, among others--the notion of soft systems has gained increasing traction as a counterpoint to permanent, static and hard systems. Acknowledging fluid and indeterminate situations with complex feedback loops that allow for reaction and adaption, the possibility of soft systems has reentered the domain of design. The examples displayed in "Bracket goes soft" are offered as nothing more than a short catalog of soft systems--some explicitly architectural, others geological, others entirely metaphorical. In all cases, these examples explore how the notion of going soft can be iterated across professions, disciplines, and fields of research. The book is divided into the themes "sensing/feedback"; "interfacing/ enveloping"; "subverting/hijacking"; "formatting/ distributing"; "contingency/ resilience"; "diffusing/generating". Bracket is a book series structured around an open call that highlights emerging critical issues at the juncture of architecture, environment, and digital culture. The editorial board and jury for Bracket 2 includes Benjamin Bratton, Julia Czerniak, Jeffrey Inaba, Geoff Manaugh, Philippe Rahm, Charles Renfro, as well as co-editors Neeraj Bhatia and Lola Sheppard. Bracket is a collaboration between InfraNet Lab and Archinect.

[Anatomy, Phylogeny and Palaeobiology of Early Archosaurs and Their Kin](#) Jun 18 2021 Archosaurs, an important reptile group that includes today's crocodiles and birds, arose during the Triassic in the aftermath of the greatest mass extinction of all time. In the last 20 years, our understanding of the early evolution of the group has improved substantially with the discovery of new fossils and species of early archosaurs and their closest relatives, a better understanding of the relationships of these animals, and new insights into their palaeobiology. In order to synthesize these new data, researchers of early archosaurs from around the world met at the first symposium of early archosaur evolution at the IV Congreso Latinoamericano de Paleontología de Vertebrados (September 2011) in San Juan, Argentina. This symposium facilitated collaboration and strove to paint a better understanding of these extraordinary animals. The resultant body of work is a state-of-the-art examination of early archosaur groups and their close relatives including historical, anatomical, biogeographical, evolutionary and palaeobiological data. This contribution furthers our knowledge of the anatomy, relationships, and palaeobiology of species-level taxa as well as more global patterns of archosaur evolution during the Triassic -- P. 4 of cover.

[Geotechnical Aspects of Underground Construction in Soft Ground](#) Feb 12 2021 Geotechnical Aspects of Underground Construction in Soft Ground comprises a collection of 112 papers, four general reports on the symposium themes, the Fujita Lecture, three Special Lectures and the Bright Spark Lecture presented at the Tenth International Symposium on Geotechnical Aspects of Underground Construction in Soft Ground, held in Cambridge, United Kingdom, 27-29 June 2022. The symposium is the latest in a series which began in New Delhi in 1994, and was followed by symposia in London (1996), Tokyo (1999), Toulouse (2002), Amsterdam (2005), Shanghai (2008), Rome (2011), Seoul (2014) and Sao Paulo (2017). This was organised by the Geotechnical Research Group at the University of Cambridge, under the auspices of the Technical Committee TC204 of the International Society for Soil Mechanics and Geotechnical Engineering (ISSMGE). Geotechnical Aspects of Underground Construction in Soft Ground includes contributions from more than 25 countries on research, design and construction of underground works in soft ground. The contributions cover: Field case studies Sensing technologies and monitoring for underground construction in soft ground Physical and numerical modelling of tunnels and deep excavations in soft ground Seismic response of underground infrastructure in soft ground Design and application of ground improvement for underground construction Ground movements, interaction with existing structures and mitigation measures The general reports give an overview of the papers submitted to the symposium, covered in four technical sessions. The proceedings include the written version of the five invited lectures covering topics ranging from developments in geotechnical aspects of underground construction, tunnelling and groundwater interaction (short and long-term effects), the influence of earth pressure balance shield tunnelling on pre-convergence and segmental liner loading (field observations, modelling and implications on design). Similar to previous editions, Geotechnical Aspects of Underground Construction in Soft Ground represents a valuable source of reference on the current practice of analysis, design, and construction of tunnels and deep excavations in soft ground. The book is particularly aimed at academics and professionals interested in geotechnical and underground engineering.

[Mushrooms](#) Sep 29 2019 'Roger Phillips has written the best mushroom book I know.' - Hugh Fearnley-Whittingstall, author of River Cottage Veg Every Day! The culmination of over thirty years' work, Roger Phillips's authoritative and superbly illustrated reference work is packed with information and original photographs. The essential illustrated mycological encyclopedia, this book is also clear, user friendly and will appeal to a wide range of readers.

Unsurpassed in both illustrative and descriptive detail, Mushrooms contains over 1,250 photographs, often showing the specimens in various stages of growth, and includes all the latest botanical and common names as well as current ecological information on endangered species. Having sold more than 750,000 copies in Europe of his previous title on mushrooms, Roger Phillips's Mushrooms once again sets the benchmark. Quite simply, nobody with an interest in the subject can afford to be without this book.

[Now Urbanism](#) Sep 21 2021 After more than a century of heroic urban visions, urban dwellers today live in suburban subdivisions, gated communities, edge cities, apartment towers, and slums. The contemporary cities we know are more often the embodiment of unexpected outcomes and unintended consequences rather than visionary planning. As an alternative approach for rethinking and remaking today's cities and regions, this book explores the intersections of critical inquiry and immediate, substantive actions. The contributions inside recognize the rich complexities of the present city not as barriers or obstacles but as grounds for uncovering opportunity and unleashing potential. Now Urbanism asserts that the future city is already here. It views city making as grounded in the imperfect, messy, yet rich reality of the existing city and the everyday purposeful agency of its dwellers. Through a framework of situating, grounding, performing, distributing, instigating, and enduring, these contributions written by a multidisciplinary group of practitioners and scholars illustrate specificity, context, agency, and networks of actors and actions in the re-making of the contemporary city.
