The Better End Feb 23 2022 While modern Americans strive to control nearly every aspect of their lives, many of us abandon control of life's final passage. But the realities of twenty-first-century medicine will allow most of us to have a say in how, when, and where we die, so we need to make decisions here, too. Through compelling real-life stories and practical guidance, this book helps readers navigate end-of-life care for themselves and their loved ones.

empowerment, and inspiration. What we choose for our end-of-life care depends on accurate information and on our personal values. We need not only to understand new medical advances but also to appreciate the wisdom of humanity's past and present. Dan Morhaim, a practicing physician and Maryland state legislator, guides readers through the medical and legal maze of end-of-life care. He details the care choices available to patients and explains why living wills and

advance directives are a necessity for every American. He tells readers where to find free and readily available living wills and advance directives and why it is so important for everyone—young and old—to complete them. Dr. Morhaim helps readers keep decisions in their own hands and spare their families the uncertainty and trauma of guessing about their end-of-life wishes. With this book, he breaks down the barriers to a difficult but essential topic, helping readers to open this often

Theory of the Inhomogeneous Electron Gas Dec 24 2021 The theory of the inhomogeneous electron gas had its origin in the Thomas Fermi statistical theory, which is discussed in the first chapter of this book. This already leads to significant physical results for the binding energies of atomic ions, though because it leaves out shell structure the results of such a theory cannot reflect the richness of the Periodic Table. Therefore, for a long time, the earlier method proposed by Hartree, in which each electron is assigned its own personal wave function and

energy, dominated atomic theory. The extension of the Hartree theory by Fock, to include exchange, had its parallel in the density description when Dirac showed how to incorporate exchange in the Thomas-Fermi theory. Considerably later, in 1951, Slater, in an important paper, showed how a result similar to but not identical with that of Dirac followed as a simplification of the Hartree-Fock method. It was Gombas and other workers who recognized that one could also incorporate electron correlation consistently into the Thomas-Fermi-Dirac theory by using uniform

Moral Teachings of Islam Aug 08 2020 In Islamic life and tradition, Hadith sayings enshrine the most important teachings after the Qur'an itself. Derived from the Sunnah or teachings of the Prophet and his Companions and their followers, these precepts were collected under the

title Al-Adab al-mufrad-meaning 'Good behaviour singled out'-by Imam al-Bukhari in the ninth century CE. The Hadith sayings in al-Bukhari's writings formed a large corpus that covered the way Muslims should conduct their lives, from duties to parents, family, relatives, neighbors and friends, to instruction about honesty, generosity, truthfulness and kindness. While al-Bukhari's original text runs to many hundreds of pages forming several volumes, Abdul Hamid has made a selection of the teachings that has relevance and appeal to today's readership, with appeal not only to

Harriet Hyman Alonso investigates the personalities and the philosophical disagreements of the WPU leading members on their political tactics and fierce commitment to pacifism and feminism, and on their eventual burnout. Drawing on a wealth of primary materials, Alonso traces the lineage of today's women's peace movement from Garrisonian abolitionism through the suffrage movement groups such as the WPU to contemporary efforts of the Seneca Women's Peace Encampment.

The Sack of Rome
Sep 08 2020 The sack of Rome shocked the Christian world. Following the battle of Pavia, Pope Clement VII joined (1526) the French-led League of Cognac to resist the threatened Habsburg

domination of Europe. Emperor Charles V appealed to the German diet for support and raised an army, which entered Italy in 1527 and joined the imperial forces from Milan, commanded by the Duke of Bourbon. This army marched on Rome, hoping to detach the pope from the league.

The many Lutherans in its ranks boasted that they came with hemp halters to hang the cardinals and a silk one for the pope. Rome fell on 6 May 1527, Bourbon being killed in the first assault. Discipline collapsed, and the city was savagely pillaged for a week before some control was restored. Judith Hook's book is here

dimensions of individual autonomy. Rejecting the feminist charge that autonomy is inherently masculinist, the contributors draw on feminist critiques of autonomy to challenge and enrich contemporary philosophical debates about agency, identity, and moral responsibility. The essays analyze the complex ways in which oppression can impair an agent's capacity for autonomy, and investigate connections, neglected by standard accounts, between autonomy and other aspects of the agent.

conception, self-worth, memory, and the imagination. *Violence and Nonviolence* Apr 27 2022 Through an original and close reading of the key literature regarding both revolutionary violence and nonviolence, this book collapses the widely-assumed concepts of violence and nonviolence as mutually exclusive. By revealing that violence and nonviolence are braided concepts arising from human action, Peyman Vahabzadeh submits that in many cases the actions deemed to be either violent or nonviolent might actually produce outcomes that are not essentially different.

Vahabzadeh offers a conceptual phenomenology of the key thinkers and theorists of both revolutionary violence and various approaches to nonviolence. Arguing that violence is inseparable from civilizations, *Violence and Nonviolence* concludes by making a number of original conceptualizations regarding the relationship between violence and nonviolence, exploring the possibility of a nonviolent future and proposing to understand the relationship between the two concepts as concentric, not opposites.
