The Welfare of Sheep Apr 29 2022 Animal welfare is attracting increasing interest worldwide, but particularly from those in developed countries, who now have the knowledge and resources to be able to improve the welfare of farm animals. The increased attention given to farm animal welfare in the

West derives largely from the fact that the relentless pursuit of financial reward and efficiency has led to the development of intensive animal production systems that disturb the conscience of many consumers. In developing countries, human survival is still a daily uncertainty, so that provision for animal welfare has to be balanced against human welfare. Welfare is usually provided for only if it supports the output of the animal, be it food, work, clothing, sport or companionship. In reality there are resources for all if they are properly husbanded in both developing and developed countries. The inequitable division of

the world's riches creates physical and psychological poverty for humans and animals alike in many sectors of the world. Livestock are the world's biggest land user (FAO, 2002) and the population is increasing rapidly to meet the need of an expanding human population. Populations of farm animals managed by humans are therefore increasing worldwide, and in some regions there is a tendency to allocate fewer resources, such as labour, to each animal with potentially adverse consequences on the animals' welfare.

Sheep Jun 19 2021 This classic of sheep farming discusses the breeding, raising and care of sheep and ewes, and how to combat the common diseases and problems that flocks encounter. The author begins by identifying the various breeds of sheep, and their strengths and weaknesses. Writing in Britain at the turn of the 20th century, Jenner-Fust was a man experienced with farming and raising of livestock. He discusses how certain breeds of sheep are susceptible to disease, while others do better on rough and hilly terrain. Some breeds are very placid and calm in temperament, whether alone or in flocks, whilst others will only respond and obey a herder who is trained in their management. Certain aspects of raising sheep are universal: the birthing and weaning of lambs being one such process. Through experience, the author realized that certain foods and environmental improvements makes ewes relax during the process of giving

birth to lambs. Tending to the newborn lambs and their mothers, whose bodies are frequently inflamed after delivery, is vital - some ewes, when left untended and in discomfort, will refuse to feed their young. Overall, Jenner-Fust offers an insightful and informative look at sheep farming, his ideas on care and tending informed by years of experience.

Sheep Feeding and Farm Management (Classic Reprint) Jun 27 2019 Excerpt from Sheep Feeding and Farm Management This book is the result of an original investigation carried on by the author, covering a period of about four years. It is based on farm practices as they occur in the United States, - particularly in the

Middle West, - and their relation to the feeding of sheep for market. Its purpose is to furnish to those interested in the feeding of sheep for market, whether students or farmers, the information that will enable them to carry on the necessary operations profitably. The student desiring to inform himself regarding the most modern and profitable methods for buying, feeding, and marketing sheep, instinctively turns to the literature on the subject. Save for a few bulletins on experimental sheep feeding, he finds that the field has been practically untouched. He sees in our agricultural press frequent reports and comments that seem to point to this phase of farming as not only profitable but also sound, and advisable from the standpoint of the economical use of crops, the conservation of soil fertility, and the saving of labor. Naturally he desires a reliable and practical source of information on the subject. Hence to the student the author would commend these pages, trusting that in their study he will find the answers to his questions, and fact and plans that will aid him in his future farm operations.
