This book uses clear, easy to understand language to answer complex questions about sex and relationships, and covers all manner of tricky subjects from puberty to consent with delicate accuracy and honesty. Exploring the Biological Contributions to Human Health Nov 30 2019 It's obvious why only men develop prostate cancer and why only women get ovarian cancer. But it is not obvious why women are more likely to recover language ability after a stroke than men or why women are more apt to develop autoimmune diseases such as lupus. Sex differences in health throughout the lifespan have been documented. *Exploring the Biological Contributions to Human Health* begins to snap the pieces of the puzzle into place so that this knowledge can be used to improve health for both sexes. From behavior and cognition to metabolism and response to chemicals and infectious organisms, this book explores the health impact of sex (being male or female, according to reproductive organs and chromosomes) and gender (one's sense of self as male or female in society). *Exploring the Biological Contributions to Human Health* discusses basic biochemical differences in the cells of males and females and health variability between the sexes from conception throughout life. The book identifies key research needs and opportunities and addresses barriers to research. *Exploring the Biological Contributions to Human Health* will be important to health policy makers, basic, applied, and clinical researchers, educators, providers, and journalists-while being very accessible to interested lay readers.

The Seeds of Life Oct 22 2021 Why cracking the code of human conception took centuries of wild theories, misogynist blunders, and ludicrous mistakes Throughout most of human history, babies were surprises. People knew the basics: men and women had sex, and sometimes babies followed. But beyond that the origins of life were a colossal mystery. The Seeds of Life is the remarkable and rollicking story of how a series of blundering geniuses and brilliant amateurs struggled for two centuries to discover where, exactly, babies come from. Taking a page from investigative thrillers, acclaimed science writer

Edward Dolnick looks to these early scientists as if they were detectives hot on the trail of a bedeviling and urgent mystery. These strange searchers included an Italian surgeon using shark teeth to prove that female reproductive organs were not 'failed' male genitalia, and a Catholic priest who designed ingenious miniature pants to prove that frogs required semen to fertilize their eggs. A witty and rousing history of science, *The Seeds of Life* presents our greatest scientists struggling-against their perceptions, their religious beliefs, and their deep-seated prejudices-to uncover how and where we come from. [Where Do Babies Come From?](#) Jul 27 2019 A beautifully illustrated book uses simple explanations to deal with the sensitive issue of how life begins.

American Baby Sep 08 2020 A New York Times Notable Book The shocking truth about postwar adoption in America, told through the bittersweet story of one teenager, the son she was forced to relinquish, and their search to find each other. “[T]his book about the past might foreshadow a coming shift in the future... ‘I don’t think any legislators in those states who are anti-abortion are actually thinking, “Oh, great, these single women are gonna raise more children.” No, their hope is that those children will be placed for adoption. But is that the reality? I doubt it.’”[says Glaser]” -Mother Jones During the Baby Boom in 1960s America, women were encouraged to stay home and raise large families, but sex and childbirth were taboo subjects. Premarital sex was common, but birth control was hard to get and abortion was illegal. In 1961, sixteen-year-old Margaret Erle fell in love and became pregnant. Her enraged family sent her to a maternity home, where social workers threatened her with jail until she signed away her parental rights. Her son vanished, his whereabouts and new identity known only to an adoption agency that would never share the slightest detail about his fate. The adoption business was founded on secrecy and lies. *American Baby* lays out how a lucrative and exploitative industry removed children from their birth mothers and placed them with hopeful families, fabricating stories about infants' origins and destinations, then closing the door firmly between the parties forever. Adoption agencies and other organizations that purported to help pregnant women struck unethical deals with doctors and researchers for pseudoscientific "assessments," and shamed millions of women into surrendering their children. The identities of many who were adopted or who surrendered a child in the postwar decades are still locked in sealed files. Gabrielle Glaser dramatically illustrates in *Margaret and David's* tale—one they share with millions of Americans—a story of loss, love, and the search for identity.

How Babies Sleep Jun 05 2020 Discover the best baby sleep method—gentle, science-backed, and inspired by the latest Nobel Prize-winning research—that shows you how to get your baby to sleep through the night naturally. Sleep—or the lack of it—is one of the most crucial issues for new parents. Newborn babies typically wake every two to three hours, and there's nothing bleary-eyed, exhausted parents want more than a night of uninterrupted sleep. But while there's plenty of advice out

there, there is nothing that's based on the latest cutting-edge research about sleep—until now. In *How Babies Sleep*, Sofia Axelrod, PhD—neuroscientist, sleep consultant, and mother of two—introduces the first baby sleep method that is truly rooted in the science of sleep. After having her first child, Axelrod realized that the typical baby sleep advice conflicted with the actual science of sleep, including the findings from her mentor's Nobel Prize-winning sleep lab. She developed her transformative method based on the latest discoveries about our body's circadian clock and how it is disturbed by light and other external stimuli. After seeing incredible results with her own babies, she has since counseled countless families in her groundbreaking method—which works with babies' needs and helps little ones learn to self-soothe, fall asleep more easily, and stay asleep through the night. You'll discover helpful tips that work, and learn: why using a red lightbulb (instead of a regular one) in the nursery at night can minimize wakings; why the age-old advice “don't wake a sleeping baby” isn't true; how to create a healthy routine; how to sleep train gently with minimal crying (under two minutes); and so much more in this revolutionary and effective book that will help both you and your baby enjoy a peaceful night's sleep.

God Made Babies Aug 08 2020 "Where do babies come from?" This common question all too often leaves parents perplexed about what to say and when to say it. Justin and Lindsey Holcomb tackle this tough question in a common sense, biblical way. They help parents start the conversation with their children about sex by giving them the basic tools to guide them—including specific biblical content and age-appropriate ways of talking to children at different stages. The Holcombs along with illustrator Trish Mahoney have been helping parents tackle hard subjects with children for many years, beginning with the award-winning *God Made All of Me: A Book to Help Children Protect Their Bodies*. Now they bring their expertise to the all-important conversation about sex in *God Made Babies: Helping Parents Start the Conversation about Sex*. Instead of leaving this conversation to "experts" or to the culture, they equip parents to answer questions about sex in the right way at the right time. Drawing from the story of creation and how God made the living world to reproduce, *God Made Babies* helps children to understand the gift of procreation in the light of God's goodness and care. Rather than waiting to have this conversation with their child at the "perfect" time, the authors encourage parents to answer questions at every stage with just the right amount of information. *God Made Babies* is part of the *God Made Me Series* which equips parents to have important, impactful conversations with their children, helping them to grow in understanding of God, themselves, and others. Each book in the series contains a special section just for parents and caregivers that provides biblical guidance and offers additional information and talking about the topic addressed in the story.

Babies Made Us Modern Nov 22 2021 Placing babies' lives at the center of her narrative, historian Janet Golden analyzes the

dramatic transformations in the lives of American babies during the twentieth century. She examines how babies shaped American society and culture and led their families into the modern world to become more accepting of scientific medicine, active consumers, open to new theories of human psychological development, and welcoming of government advice and programs. Importantly Golden also connects the reduction in infant mortality to the increasing privatization of American lives. She also examines the influence of cultural traditions and religious practices upon the diversity of infant lives, exploring the ways class, race, region, gender, and community shaped life in the nursery and household.

Now two fully illustrated books--one for pre-readers and one for early readers--complete the series. How God Makes Babies is an age-appropriate introduction to basic sexuality, helping children ages 6 to 9 understand that God created males and females differently and with a purpose, emphasizing that God is a part of each family from conception to death.

This little book is the "Theology of the Body" for children--get it and give it to children, give it to schools and to Religious-ed classes. I see Pope John Paul II laughing in heaven, amazed that his Theology of the Body has been written in such a way that children can understand it. May he intercede and bless the authors and the illustrator." Fr. Pio Mandato, FMHJ

Where Do Babies Come From? Dec 24 2021 An engaging introduction for very young children to the basic facts of life in

a way that is gentle, age-appropriate and accessible.
