Rethinking the Case Study in International Business and Management Research Jan 03 2020 This important and original book places the case study in international business research in its historical context, critically evaluates current case study practices in the field and proposes a more pluralistic future for case research within international business and international management research. While the case study is the most popular qualitative research strategy in the field, only a narrow selection of possible approaches is currently used. IB and IM researchers typically rely on a case study approach that could be characterized as 'qualitative positivism'. The editors and contributors look beyond this disciplinary convention and encourage greater pluralism in IB and IM case research. Their key argument is that increased awareness of prevailing disciplinary conventions - and their limitations - increases the potential for methodological innovation and versatility in case research. The contributions provide critical, novel and innovative perspectives on the case study in IB and IM research. The book offers inspiration to case authors and an authoritative methodological reference for those publishing and reviewing case research. It will also be highly regarded by postgraduate and doctoral students in IB and IM as well as both qualitative and quantitative researchers in the field.

Re-Viewing Resistance in Namibian History May 31 2022 Re-Viewing Resistance in Namibian History brings together the work of experienced academics and a new wave of young Namibian historians - architects of the past - who are working on a range of public history and heritage projects, from late nineteenth century resistance to the use of songs, from the role of gender in SWAPO's camps to memorialisation, and from international solidarity to aspects of the history of Kavango and Caprivi. In a culturally and politically diverse democracy such as Namibia, there are bound to be different perspectives on the past, and history will be as plural as the history-tellers. The chapters in this book reflect this diversity, and combine to create a remarkable collection of divergent voices, providing alternative perspectives on the past. Re-Viewing Resistance in Namibian History writes 'forgotten' people into history; provides a reading of the past that reflects the tensions and competing identities that pervaded 'the struggle'; and deals with 'heritage that hurts'.

Hormones and Economic Behavior Apr 29 2022 Behavioral correlates of hormones, emphasized by psychologists, have captured the attention of economists in the past years. Behavioral economists, in particular, have investigated the possible roles of hormones on economic decision making and behavior as well as social preferences and cognitive abilities. Testosterone, oxytocin, dopamine, serotonin and stress hormones are the foremost studied ones in economic contexts. Yet, the results are mixed and the relationship between hormones and economic behavior is under-investigated to this date. Hormone levels are measurable and manipulatable (e.g. activate, de-activate, block). The fact that the behavioral economics also employs experimental methodology makes it possible to observe both correlational and causal relationships between hormones and economic behavior. Since numerous environmental, social and biological factors interact with hormone fluctuations, capturing the true impacts of hormones on decisions and behavior is challenging. Manipulating hormone levels in the body is a method that is used to tackle this issue. Such studies compare observed behaviors of hormones or placebo administrated participants to determine causal relationships. This Research Topic welcomes the studies on the direct or indirect correlates of hormones on economic behavior and decision making to create new insights on the economic consequences of endocrine activity.
