Spatial Database for GPS Wildlife Tracking Data Aug 18 2021 This book guides animal ecologists, biologists and wildlife and data managers through a step-by-step procedure to build their own advanced software platforms to manage and process wildlife tracking data. This unique, problem-solving-oriented guide focuses on how to extract the most from GPS animal tracking data, while preventing error propagation and optimizing analysis performance. Based on the open source PostgreSQL/PostGIS spatial database, the software platform will allow researchers and managers to integrate and harmonize GPS tracking data together with animal characteristics, environmental data sets, including remote sensing image time series, and other bio-logged data, such as acceleration data. Moreover, the book shows how the powerful R statistical environment can be integrated into the software platform, either connecting the database with R, or embedding the same tools in the database through the PostgreSQL extension PL/R. The client/server architecture allows users to remotely connect a number of software applications that can be used as a database front end, including GIS software and WebGIS. Each chapter offers a real-world data management and processing problem that is discussed in its biological context; solutions are proposed and exemplified through ad hoc SQL code, progressively exploring the potential of spatial database functions applied to the respective wildlife tracking case. Finally, wildlife tracking management issues are discussed in the increasingly widespread framework of collaborative science and

data sharing. GPS animal telemetry data from a real study, freely available online, are used to demonstrate the proposed examples. This book is also suitable for undergraduate and graduate students, if accompanied by the basics of databases.

GPS Sep 06 2020 If you've ever experienced change in your life, you'll know it can be an unorganised, confusing, and overwhelming beast. Sometimes it's exhilarating and exciting, sometimes it's heartbreaking and sad. Whether you investigate the change, or it finds you, it's something you can never truly plan for because every change is different. You may be in a different life stage, the stakes might be higher or lower, and your readiness for the change can vary from one extreme to the other. The moment of awareness that something needs to change, or has changed dramatically, can be overwhelming and confusing, painful and debilitating. Questions, fears, anger, stress, and uncertainty rush to the front of your mind, clouding your usually logical, clear thinking, and bringing any forward action to a grinding halt. Instead, your mind is filled with questions such as: What do I do now? How could this have happened? How do I make this better? Can I make it better? Am I a bad mum? How come I'm the only one not coping? The GPS provides guidance on: where to start with change and how to get a handle on what's just happened; when to take action and when to step back and allow nature to take its course; the steps you can take to understand change and work with it, instead of against it; and what you can do to influence change in your world. Take a systemised way through life's challenging, confusing, and overwhelming moments - and get back some reassurance when everything else seems out of control.
