Competing Economic Paradigms in China Jan 14 2021 When the Chinese economic reforms began in

1978, Marxist economics infused all the institutions of economic theory in China, from academic departments and economics journals to government departments and economic think tanks. By the year 2000, neoclassical economics dominated these institutions and organized most economic discussion. This book explains how and why neoclassical economic theory replaced Marxist economic theory as the dominant economics paradigm in China. It rejects the idea that the rise of neoclassical theory was a triumph of reason over ideology, and instead, using a sociology of knowledge approach, links the rise of neoclassical economics to broad ideological currents and to the political-economic projects that key social groups inside and outside China wanted to enable. The book concludes with a discussion of the nature of economic theory and economics education in China today.

Relational Anthropology for Contemporary Economics Aug 09 2020 This open access book offers a multidisciplinary dialogue on relational anthropology in contemporary economics. A particular view of the human being is often assumed in economic models, but seldom acknowledged let alone explicated. Addressing this neglected area of research in economic studies, altogether the contributors touch upon the importance and potential of virtues, the notions of freedom and self-love, the potential of simulation models, the dialectics of love, and questions of methodology in constructing a relational anthropology for contemporary economics. The overall result is a highly informative and constructive dialogue, establishing inter alia a research agenda for future collaborative and multidisciplinary study.

The Nation [Electronic Resource] Mar 16 2021

The Idea of History in Constructing Economics Jan 02 2020 How scientific is economics? This question

has often been framed by analogies and correspondences made between economics and other, seemingly more well-established scientific disciplines, starting with classical mechanics. At the same time economics is likely to be seen in opposition to or in contrast with history, where the reliance upon generalizing rules, thought experiments, and model construction in economics is set against the amassing of particular facts intended to create narratives in history. In this new volume, Turk explores the relationship between economics and history, including the often fraught one between economics and economic history, making the case that economics does in fact require the proper grounding in history that has so often been ignored. This work challenges the attempt to link economics with other, more clearly 'scientific' disciplines as flawed and fundamentally wrongheaded. A key element of this book is its examination of the gaps and associations that exist in, or are seen through, linkages with thermodynamics, classical mechanics, biology, literature, mathematics, philosophy, and sociology. This exploration is frequently undertaken through study of the work of one or more major figures in the history of economic thought, ranging from Quesnay and Smith, through Walras and Max Weber, to Robinson, Krugman, David, and Arthur. Through the possibility of an alternative to the gaps noted in each such comparison, the underlying, necessary connection between economics and history can be brought out. The book concludes by exploring the basis for the positive construction of a historical economics. This book is suited for those who study history of economic thought and philosophy of economics.

Annual Report Dec 13 2020 Includes report of the director of the New Jersey Agricultural College Experiment Station.

AQA Economics Student Guide 2: The national economy in a global context Dec 01 2019 Exam Board: AQA Level: AS/A-level Subject: Economics Written by experienced authors Ray and James Powell, this Student Guide for Economics focuses on the key topics of economic performance and macroeconomic policy in a global context. Open-Economy Macroeconomics Nov 23 2021 The integration of market economies is one of the most remarkable features of international economics, which has important implications for macroeconomic performance in open economies. Equally important is the declining relevance of the real versus the monetary theory dichotomy. These papers focus on those aspects of monetary policy which relate to credibility and non-neutrality; the domestic adjustment to foreign shocks; the interdependence of open economies and their strategic interactions. An important section is also devoted to the innovative modelling of exchange rate dynamics.

The Fourth Industrial Revolution Jul 28 2019 The founder and executive chairman of the World Economic Forum on how the impending technological revolution will change our lives We are on the brink of the Fourth Industrial Revolution. And this one will be unlike any other in human history. Characterized by new technologies fusing the physical, digital and biological worlds, the Fourth Industrial Revolution will impact all disciplines, economies and industries - and it will do so at an unprecedented rate. World Economic Forum data predicts that by 2025 we will see: commercial use of nanomaterials 200 times stronger than steel and a million times thinner than human hair; the first transplant of a 3D-printed liver; 10% of all cars on US roads being driverless; and much more besides. In The Fourth Industrial Revolution, Schwab outlines the key technologies driving this revolution, discusses the major impacts on governments, businesses, civil society and individuals, and offers bold ideas for what can be done to shape a better future for all.
