Vanishing Asia Nov 24 2019 This is a 3-volume set of oversize books that span the continent of Asia. Ancient and beautiful traditions in Asia that are rapidly disappearing are recorded here in 9,000 images on 1,000 pages. The author has visited 35 countries in Asia and has travelled to the end of the road in its most remote places to capture the costumes, architecture, festivals, and lifestyles that are vanishing. The diverse cultures range from Turkey in the west to Japan in the east, from Siberia in the north to Indonesia in the south, and everything in between. Volume 1 covers West Asia, Volume 2 Central Asia, and Volume 3 East Asia. Every one of its 1,000 pages is uniquely designed, and every one of its 9,000 images is captioned. This is an ambitious and extreme passion project that the author/photographer has worked on for 49 years. Many of the scenes depicted in the book are now gone from the world, and others are becoming rarer by the day. There is no other book like it.

The Modern Psalmist Apr 22 2022

Functionality of Food Phytochemicals Jan 27 2020 Phytochemists are aware that their focus of interest is receiving attention from a wider segment of society and from a greater diversity of disciplines within the scientific community than ever before. Nonetheless, they were bemused to

learn three years ago that "until recently scientists didn't even know phytochemicals existed" (Newsweek, April 24, 1994). Changing public perception of the positive contributions of phytochemicals to human well-being has foundations in scientific advances. With popular reports emphasizing the important implications of phytochemicals in the daily lives of people, there is a pressing need for those working in this area to explain their diverse scientific activities to the public. Chemicals from plant foods are linked through epidemiological and experimental studies with reduced incidence of chronic degenerative diseases. Phytomedicines, standardized according to particular constituents, are making increasing contributions to health care. Naturally occurring constituents of plants are recognized as fundamental to the appeal, quality, and marketability of food products. In light of such developments, perceptions by phytochemists of their own discipline and its applications are expanding. Until recently, food phytochemistry largely implied food toxicants. Food plants were familiar, but seldom the source of novel economically important compounds. Increasingly sophisticated methods of analysis, however, have opened new opportunities for understanding the nature and functions of food constituents, and for manipulating them to improve the quality, acceptability, and value of food products.

A Framework to Guide Selection of Chemical Alternatives Nov 05 2020 Historically, regulations governing chemical use have often focused on widely used chemicals and acute human health effects of exposure to them, as well as their potential to cause cancer and other adverse health effects. As scientific knowledge has expanded there has been an increased awareness of the mechanisms through which chemicals may exert harmful effects on human health, as well as their effects on other species and ecosystems. Identification of high-priority chemicals and other chemicals of concern has prompted a growing number of state and local governments, as well as major companies, to take steps beyond existing hazardous chemical federal legislation. Interest in approaches and policies that ensure that any new substances substituted for chemicals of concern are assessed as carefully and thoroughly as possible has also burgeoned. The overarching goal of these approaches is to avoid regrettable substitutions, which occur when a toxic chemical is replaced by another chemical that later proved unsuitable because of persistence, bioaccumulation, toxicity, or other concerns. Chemical alternative assessments are tools designed to facilitate consideration of these factors to assist stakeholders in identifying chemicals that may have the greatest likelihood of harm to human and ecological health, and to provide guidance on how the industry may develop and adopt safer alternatives. A Framework to Guide Selection of Chemical Alternatives develops and demonstrates a decision framework for evaluating potentially safer substitute chemicals as primarily determined by human health and ecological risks. This new framework is informed by previous efforts by regulatory agencies, academic institutions, and others to develop alternative assessment frameworks that could be operationalized. In addition to hazard assessments, the framework incorporates steps for life-cycle thinking - which considers possible impacts of a chemical at all stages including production, use, and disposal - as well as steps for performance and economic assessments. The report also highlights how modern information sources such as computational modeling can supplement traditional toxicology data in the assessment process. This new framework allows the evaluation of the full range of benefits and shortcomings of substitutes, and examination of tradeoffs between these risks and factors such as product functionality, product efficacy, process safety, and resource use. Through case studies, this report demonstrates how different users in

contrasting decision contexts with diverse priorities can apply the framework. This report will be an essential resource to the chemical industry, environmentalists, ecologists, and state and local governments.

Emerging Infectious Diseases and the Threat to Occupational Health in the U.S. and Canada Jul 13 2021 Hospitals in the US and Canada are ill-prepared for the threat of emerging infectious diseases, especially in the area of protecting healthcare workers, nurses, doctors, and first responders from transmissions. Current protocols from guideline agencies and health organizations and health departments that include state pandemic flu plans do not follow scientific evidence in many of their recommendations. Economics and 'ease of use' are trumping good science in the decision making process. For example, protocols do not demand the most stringent precautions that would protect for healthcare workers from unknown factors of transmission in the case of rapidly emerging diseases. Respiratory protection, negative pressure isolation rooms, training of healthcare workers, personal protective equipment, ventilation designs, triage of surge patients, funding issues are all areas of concern that remain controversial in current occupational health protection models. *Emerging Infectious Diseases and the Threat to Occupational Health in the US and Canada* offers a critical review of existing plans and infrastructures for emerging diseases and the response capabilities of healthcare delivery systems to protect the occupational health and offers many solutions. The authors perform failure analysis that cannot be found in other texts, and offer positive solutions, strategies, and tactics for strengthening the hospital and the public health response to potentially catastrophic health crises. This book contains invaluable information for managers, professionals, and policy makers in infectious disease organizations, public health organizations, as well as occupational health organizations.

Snow's Pathfinder Railway Guide Jul 25 2022

Occupational and Environmental Safety and Health Apr 29 2020 This book explores a number of important issues in the area of occupational safety and hygiene. Presenting both research and best practices for the evaluation of occupational risk, safety and health in various types of industry, it particularly focuses on occupational safety in automated environments, innovative management systems and occupational safety in a global context. The different chapters examine the perspectives of all those involved, such as managers, workers and OSH professionals. Based on selected contributions presented at the 15th International Symposium on Occupational Safety and Hygiene (SHO 2019), held on 15–16 April, 2019, in Guimarães, Portugal, the book serves as a timely reference guide and source of inspiration to OSH researchers, practitioners and organizations operating in a global context.

International Reference Guide to Space Launch Systems Jul 01 2020 This bestselling

reference guide contains the most reliable and comprehensive material on launch programs in Brazil, China, Europe, India, Israel, and the United States. Packed with illustrations and figures, this edition has been updated and expanded, and offers a quick and easy data retrieval source for policy makers, planners, engineers, launch buyers, and students.

Safety and Health in Construction Mar 21 2022 "It goes a long way in mapping out the agenda for health and safety professionals in this most dangerous and populous industry." *Annals of Occupational Hygiene*, Derby, United Kingdom Changes in working practices and conditions in the construction industry over the past decade have meant that the competent authorities, health and safety committees, management or employers' and workers' organizations, in particular, should take a fresh look at such aspects as the safety of workplaces, health hazards, and construction equipment and machinery. This code of practice takes account of new areas in the sector which require improved health and safety practices and other protective measures.

Marine Wastewater Outfalls and Treatment Systems Sep 03 2020 Wastewater disposal by marine outfalls is proven and effective and is a reliable and cost effective solution with minimal environmental impacts. The design and siting of submarine outfalls is a complex task that relies on many disciplines including oceanography, civil and environmental engineering, marine biology, construction, economics, and public relations. *Marine Wastewater Outfalls and Treatment Systems* brings these disciplines together and outlines all tasks involved in the planning and design of a wastewater system involving a marine outfall. This book concerns the design of marine wastewater disposal systems: that is an ocean outfall plus treatment plant. All aspects of outfall design and planning are covered, including water quality design criteria, mathematical modelling of water quality and dilution, gathering required oceanographic data, appropriate wastewater treatment for marine discharges, construction materials for marine pipelines, forces on pipelines and outfall design, outfall hydraulics, outfall construction, tunnelled outfalls, operation and maintenance, monitoring, case studies are discussed and methods for gaining public acceptance for the project are presented. Finally, costs for many outfalls around the world are summarized and methods for estimating costs are given. This is the first book to consider all aspects of marine outfall planning and construction. The authors are all extensively involved with outfall schemes and aware of recent developments. The science and technology of all aspects of outfall discharges into coastal waters and estuaries of treated municipal or industrial wastewater has advanced considerably over the past few years. *Marine Wastewater Outfalls and Treatment Systems* provides an up to date and comprehensive summary of this rapidly developing area.

Statistical Rethinking Oct 24 2019 *Statistical Rethinking: A Bayesian Course with Examples in R and Stan* builds readers' knowledge of and confidence in statistical modeling. Reflecting the need for even minor programming in today's model-based statistics, the book pushes readers to perform step-by-step calculations that are usually automated. This unique computational approach ensures that readers understand enough of the details to make reasonable choices and interpretations in their own modeling work. The text presents generalized linear multilevel models from a Bayesian perspective, relying on a simple logical interpretation of Bayesian probability and maximum entropy. It covers from the basics of regression to multilevel models. The author also discusses measurement error, missing data, and Gaussian process models for spatial and network autocorrelation. By using complete R code examples throughout, this book

provides a practical foundation for performing statistical inference. Designed for both PhD students and seasoned professionals in the natural and social sciences, it prepares them for more advanced or specialized statistical modeling. Web Resource The book is accompanied by an R package (rethinking) that is available on the author's website and GitHub. The two core functions (map and map2stan) of this package allow a variety of statistical models to be constructed from standard model formulas.

The Handbook of Environmental Remediation Aug 26 2022 Environmental remediation technologies to control or prevent pollution from hazardous waste material is a growing research area in academia and industry, and is a matter of utmost concern to public health, to improve ecology and to facilitate the redevelopment of a contaminated site. Recently, in situ and ex situ remediation technologies have been developed to rectify the contaminated sites, utilizing various tools and devices through physical, chemical, biological, electrical, and thermal processes to restrain, remove, extract, and immobilize mechanisms to minimize the contamination effects. This handbook brings altogether classical and emerging techniques for hazardous wastes, municipal solid wastes and contaminated water sites, combining chemical, biological and engineering control methods to provide a one-stop reference. This handbook presents a comprehensive and thorough description of several remediation techniques for contaminated sites resulting from both natural processes and anthropogenic activities. Providing critical insights into a range of treatments from chemical oxidation, thermal treatment, air sparging, electrokinetic remediation, stabilization/solidification, permeable reactive barriers, thermal desorption and incineration, phytoremediation, biostimulation and bioaugmentation, bioventing and biosparging through ultrasound-assisted remediation methods, electrochemical remediation methods, and nanoremediation, this handbook provides the reader an inclusive and detailed overview and then discusses future research directions. Closing chapters on green sustainable remediation, economics, health and safety issues, and environmental regulations around site remediation will make this a must-have handbook for those working in the field.

Breaking the Silence Feb 26 2020 The second edition of this bestselling book is designed for mental health professionals, educators, and the parent/caregiver, this book provides specific ideas and techniques to work with children in various areas of complicated grief. It presents words and methods to help initiate discussions of these delicate topics, as well as tools to help children understand and separate complicated grief into parts. These parts in turn can be grieved for and released one at a time. A new chapter is included, called "Communities Grieve: Involvement with Children and Trauma." It includes information on The Taiwan Earthquake and how the community worked with children, a school bus accident in which 36 elementary school children witnessed the death of the bus driver that was driving and how the school system worked with these children and their families; a boy who was running on a cross country team and got hit by a car, which was witnessed by teammates; and how a non-profit community grief agency worked with family, school, and community. The last study is from the Oklahoma bombing and the outgrowth of a place for the traumatized children and how they still work with kids and family today. This chapter then contains new activities to work with traumatized grieving children. The new edition also includes updated resources, books, curriculums, websites, hotlines and another

new chapter on bullying and victimization issues. The chapter for educators has been expanded, including the coverage of topics such as at-risk students, gay and lesbian issues, and self-injurious behaviors.

Trauma Team Dynamics Feb 20 2022 This is the first book exploring the unique dynamics created by a multidisciplinary trauma team and how crisis management strategies can improve teamwork and communication and, potentially, improve patient resuscitation outcomes. Crisis resource management (CRM) is integral to the way that we manage ourselves, team members, and patients during emergency situations. It is essentially the ability to translate knowledge of what needs to be done into effective actions during a crisis situation. Building on the revolutionary American College of Surgeons Advanced Trauma Life Support (ATLS®) course, Trauma Team Dynamics illustrates the integration of the principles of CRM to team dynamics throughout the resuscitation –from the scene, through pre-hospital care and transport, to the trauma bay, and finally to definitive care and beyond. The editors and contributors are international experts in trauma, critical care, emergency medicine, nursing, respiratory therapy, and pre-hospital care and include NASA- and United States military-affiliated experts. Trauma Team Dynamics is intended for use as both a day-to-day clinical resource and a reference text, and includes self-assessment questions as well as guidance on CRM curriculum design and implementation.

The IEE Protection Against Electric Shock Feb 08 2021 A guide to the protection of electrical equipment from electrical shock. It is part of a series of manuals designed to amplify the particular requirements of a part of the 16th Edition Wiring Regulations. Each of the guides is extensively cross-referenced to the Regulations thus providing easy access. Some Guidance Notes contain information not included in the 16th Edition but which was included in earlier editions of the IEE Wiring Regulations. All the guides have been updated to align with BS 7671:2001.
