Distributed Object Computing  
teaches readers the  
fundamentals of CORBA, the  
leading architecture for design  
of software used in parallel and  
distributed computing  
applications. Since CORBA is

based on open standards, it is  
the only effective way to learn  
object-oriented programming  
for distributed systems. This  
language independent book  
allows material to be taught  
using Java, C++ or other  
Object Oriented Programming  
Languages.

describe the state-of-the-art in

real-time systems. Topics  
include Java and hardware,  
dependability, networks and  
protocols, embedded systems,  
architecture, real-time object  
orientation, modeling,  
scheduling, real-time  
databases, RT Java, and UML-

**Spatial Databases** May 07  
2020 Spatial Databases is the  
first unified, in-depth treatment  
of special techniques for  
dealing with spatial data,  
particularly in the field of  
geographic information  
systems (GIS). This book  
surveys various techniques,  
such as spatial data models,  
algorithms, and indexing  
methods, developed to address  
specific features of spatial data  
that are not adequately  
handled by mainstream DBMS  
technology. The book also  
reviews commercial solutions  
to geographic data handling:  
ArcInfo, ArcView, and  
Smallworld GISs; and two  
extensions to the relational

model, PostgreSQL and Oracle  
Spatial. The authors examine  
these underlying GIS  
technologies, assess their  
strengths and weaknesses, and  
consider specific uses for  
which each product is best  
suited. \* Examines the  
strengths of various query  
languages and approaches to  
query processing. \* Explains  
the use of computational  
geometry in spatial databases  
GISs, providing necessary  
background and an in-depth  
look at key algorithms. \*  
Covers spatial access methods,  
including the R-tree and  
several space-driven  
structures, and is filled with  
dozens of helpful illustrations.

The focus is put to the question how different access technologies can be integrated in order to face the growing traffic load problem. Thereby, protocols are developed that allow autonomous adaptation to the current network situation on the one hand and the integration of WiFi domains

where applicable on the other hand.

routing, performance and other issues when developing a P2P application. Each technology included in the book - JXTA, Jini, JavaSpaces, J2EE, Web services - is approached from a P2P perspective, focusing on implementation concerns Java developers will face while using them. The last section includes several large-scale examples of different P2P applications - managing content, building communities, integrating services, routing messages, and using intelligent agents to gather information. The final chapter looks ahead to future developments in Java P2P technologies.

such, this book serves as an excellent snapshot of the state of the art in the field of object oriented programming. About the diversity of the submissions A workshop reader is, by its very nature, quite diverse in the topics covered as well as in the form of its contributions. This reader is not an exception to this rule: as editors we have given the respective organizers much freedom in their choice of presentation because we feel form follows content. This explains the diversity in the types of reports as well as in their lay out.
