ISE Financial Accounting Oct 24 2019 Libby/Libby/Hodge wrote this text based on their belief that the subject of financial accounting is inherently interesting, but financial accounting textbooks are often not. They believe that accounting is an exciting field of study and one that is important to future careers in business. When writing this text, they considered career relevance as their guide when selecting material, and the need to engage the student as their guide to style, pedagogy, and design. Financial Accounting 11e successfully implements a real-world, single focus company approach in every chapter. The companies chosen are engaging and the decision-making focus shows the relevance of financial accounting regardless of if a student has chosen to major in accounting. Libby/Libby/Hodge believes in the building-block approach to teaching transaction analysis. Most faculty agree that mastery of the accounting cycle is critical to success in financial accounting, and yet most financial texts introduce and develop transaction analysis in one chapter, bombarding a student early in the course with an overload of new concepts and terms. The authors slow down the introduction of transactions, giving students time to practice and gain mastery. This building-block approach leads to greater student success in their study of later topics in financial accounting such as adjusting entries

A Celebration of Mathematical Modeling Jul 21 2019 This volume celebrates the eightieth birthday of Joseph B. Keller. The authors who contributed to this volume belong to what can be called the "Keller school of applied mathematics." They are former students, postdoctoral fellows and visiting scientists who have collaborated with Joe (some of them still do) during his long career. They all look at Joe as their ultimate (role) model. Joe Keller's distinguished career has been divided between the Courant Institute of Mathematical Sciences at New York University, where he received all his degrees (his PhD adviser being the great R. Courant himself) and served as a professor for 30 years, and Stanford University, where he has been since 1978. The appended photos highlight some scenes from the old days. Those who know Joe Keller's work have been always amazed by its diversity and breadth. It is considered a well-known truth that there is not a single important area in applied mathematics or physics which Keller did not contribute to. This can be appreciated, for example, by glancing through his list of publication included in this volume. Appropriately, the papers in this book, written with Joe's inspiration, cover a variety of application areas; together they span the broad subject of mathematical modeling. The models discussed in the book describe the behavior of various systems such as those related to ?nance, waves, -croorganisms, shocks, DNA, ?ames, contact, optics, ?uids, bubbles and jets. Joe's activity includes many more areas, which unfortunately are not represented here.

Health and Wellness Guide for the Volunteer Fire Service Apr 22 2022 From Book's Introduction: Firefighting continues to be one of the nation's most dangerous and hazardous jobs with heart attacks, high physical stress levels, and sprains and strains all too common. In the past five years, the fire service has focused its attention on overcoming these issues by working to change the service's culture. The National Fire Protection Association (NFPA) has spent much time redeveloping and revamping their health and wellness standards, while career departments have been working with the International Association of Firefighters (IAFF) and International Association of Fire Chiefs (IAFC) on a wellness initiative that began in 1997. Volunteer personnel also face similar risks when it comes to health and wellness. The nature of member time constraints and tight departmental budgets in the volunteer service often inhibits the creation of comprehensive health and wellness programs. Implementing a comprehensive health and wellness program could overwhelm the resources of many volunteer departments. Time, lack of program leadership, and insufficient funding pose serious challenges to most departments, which often struggle to deliver basic fire suppression capabilities. This guide provides the rationale and suggestions for successfully implementing a health and wellness program volunteer service. It also addresses many common roadblocks.
