[Giant Planets of Our Solar System](#) Dec 29 2019 This book reviews the current state of knowledge of the atmospheres of the giant gaseous planets:

Jupiter, Saturn, Uranus, and Neptune. The current theories of their formation are reviewed and their recently observed temperature, composition and cloud structures are contrasted and compared with simple thermodynamic, radiative transfer and dynamical models. The instruments and techniques that have been used to remotely measure their atmospheric properties are also reviewed, and the likely development of outer planet observations over the next two decades is outlined. This second edition has been extensively updated following the Cassini mission results for Jupiter/Saturn and the newest ground-based measurements for Uranus/Neptune as well as on the latest development in the theories on planet formation.

Burt Rutan's Race to Space Aug 05 2020 Years ago, Burt Rutan told a reporter for Popular Mechanics, "If we make a courageous decision like the goal and program we kicked off for Apollo in 1961, we will see our children or grandchildren in outposts on other planets." Legendary science-fiction writer Arthur C. Clark would later recall Rutan's quote in a piece he wrote about SpaceShipOne and comment, "Fortunately, we need not rely solely on governments for expanding humanity's presence beyond the Earth." Burt Rutan's Race to Space showcases Rutan's herculean efforts to do just that. Smithsonian's Air and Space Museum displays his most celebrated achievements, including SpaceShipOne, which won the coveted \$10 million Ansari X Prize for private spaceflight; Voyager, which hangs with SpaceShipOne in the Milestones of Flight gallery; the Virgin Atlantic GlobalFlyer; and the VariEze. His many aerospace innovations preceding his most recently conceived designs, SpaceShipTwo and WhiteKnightTwo, chronicle a progressive, step-by-step attempt to break barriers with engineering know-how and a wondrous imagination, all the while remaining on the forefront of the burgeoning private spaceflight industry. Rutan's X Prize triumph and subsequent spacecraft designs are not a beginning, nor an end, but are steps in Burt Rutan's continuing adventure to expand humanity's presence beyond the Earth and into space.

Deep Space Craft Nov 19 2021 Deep Space Craft opens the door to interplanetary flight. It looks at this world from the vantage point of real operations on a specific mission, and follows a natural trail from the day-to-day working of this particular spacecraft, through the functioning of all spacecraft to the collaboration of the various disciplines to produce the results for which a spacecraft is designed. These results are of course mostly of a scientific nature, although a small number of interplanetary missions are also flown primarily to test and prove new engineering techniques. The author shows how, in order to make sense of all the scientific data coming back to Earth, the need for experiments and instrumentation arises, and follows the design and construction of the instruments through to their placement and testing on a spacecraft prior to launch. Examples are given of the interaction between an instrument's science team and the mission's flight team to plan and specify observations, gather and analyze data in flight, and finally present the results and discoveries to the scientific community. This highly focused, insider's guide to interplanetary space exploration uses many examples of previous and current endeavors. It will enable the reader to research almost any topic related to spacecraft and to seek the latest scientific findings, the newest emerging technologies, or the current status of a favorite flight. In order to provide easy paths from the general to the specific, the text constantly refers to the Appendices. Within the main text, the intent is general familiarization and categorization of spacecraft and instruments at a high level, to provide a mental framework to place in context and understand any spacecraft and any instrument encountered in the reader's experience. Appendix A gives illustrated descriptions of many interplanetary spacecraft, some earth-orbiters and ground facilities to reinforce the classification framework. Appendix B contains illustrated detailed descriptions of a dozen scientific instruments, including some ground-breaking engineering appliances that have either already been in operation or are poised for flight. Each instrument's range of sensitivity in wavelengths of light, etc, and its physical principle(s) of operation is described. Appendix C has a few annotated illustrations to clarify the nomenclature of regions and structures in the solar system and the planets' ring systems, and places the solar system in context with the local interstellar environment.

Bike Lust Sep 05 2020 Bike Lust roars straight into the world of women bikers and offers us a ride. In this adventure story that is also an insider's study of an American subculture, Barbara Joans enters as a passenger on the back of a bike, but soon learns to ride her own. As an anthropologist she untangles the rules, rituals, and rites of passage of the biker culture. As a new member of that culture, she struggles to overcome fear, physical weakness, and a tendency to shoot her mouth off—a tendency that very nearly gets her killed. Bike Lust travels a landscape of contradictions. Outlaws still chase freedom on the highway, but so do thousands of riders of all classes, races, and colors. Joans introduces us to the women who ride the rear—the biker chick, the calendar slut straddling the hot engine, the back-seat Betty at the latest rally, or the underage groupie at the local run. But she also gives us the first close look at women who ride in their own right, on their own bikes, as well as a new understanding of changing world of male bikers. These are ordinary women's lives made extraordinary, adding a dimension of courage to the sport not experienced by males, risking life and limb for a glimpse of the very edge of existence. This community of riders exists as a primal tribute to humanity's lust for freedom.

Voyager 2 Oct 31 2022 The past can come back to haunt you but it can save you, too. That's a lesson Bane Skiles learns in a story that begins when Hiroshi Ishikawa is commissioned as a lieutenant in the Imperial Navy. His life, he believes, is set for him, but it's changed by events beyond his control. Then, on August 3, 1943, PT boat 165 of Squadron 10 is hiding in a cove off the beaches of Vonavona in the Solomon Island chain. As the

ships captain, Skiles waits patiently and silently for the enemy. What he doesn't know then is that the action of that night will return to him years later when his grandmother foresees the Voyager sailing with black sails on a black sea. Skiles struggles to understand what the vision means and wonders if it's connected to the past or his future. Skiles gets some answers when he slips into the past in a story mixed with stolen treasure, lies, deceit, and the one thing in life he thought he had lost.
