During the last 10 years, more and more linguistic and psycholinguistic research has been devoted to the study of discourse and written texts.

Much of this research deals with the markers that underline the connections and the breaks between clauses and sentences plus the use of these markers -- by adults and children -- in the production and comprehension of oral and written material. In this volume, major observations

and theoretical views from both sides of the Atlantic are brought together to appeal to a wide range of linguists, psychologists, and speech therapists. The volume presents contributions from researchers interested specifically in adult language and from others concerned with developmental aspects of language. Some contributors deal primarily with production, whereas others concentrate on comprehension. Some direct their attention to oral discourse while others focus on written texts. To preserve overall coherence, however, the contributors were given the following recommendations: * With regard to the level of linguistic analysis, the emphasis should be on the clause level -- more particularly, on the relationships between clauses. * Special emphasis should also be placed on linguistic markers (e.g., connectives, markers of segmentation, punctuation). * An overview of a given field of research should be offered, and current research should be put

into perspective. * For contributors in the developmental field, attention should be paid to the fact that an account of the acquisition of some language functions throughout childhood should be included only if general principles of interclause relations that might be masked by the exclusive examination of adult evidence could be derived from it.

Nov 24 2021 This special issue is a tribute to Michael W. Eysenck, a distinguished pioneer in the field of cognition and emotion, and the founding editor of the Journal of Cognitive Psychology. It consists of a collection of theoretical as well as empirical papers by eminent scholars who have led the field of cognition and emotion in their own right. In keeping with Mike Eysenck's original ideas, information-processing and attentional control are dominant themes across a diversity of interesting studies and theoretical models that provide a state-of-the-art update on biological influences on cognition, cognitive influences on emotion, and personality traits influencing cognition and emotion.

She matches sound theological reflection and careful biblical study with practical advice. She speaks as one who is not yet on the other side of grief, but as one right in the middle of it all.
