Pico Rivera Nov 25 2021 The early history of the city of Pico Rivera began in 1887 when two land developers, J. Fletcher Isbell and W. T. Bone, bought the Rivera town site from Joseph Hartley Burke, Louis L. Bequette, and A. A. Bermudez. Rivera literally means along the river, and today's city boundaries are the Rio Hondo on the west and the San Gabriel River on the east. Rivera developed when the Santa Fe Railroad came through the southern portion of present-day Pico Rivera. The township of Pico was subdivided into lots beginning in 1921. Its name derived from the last Mexican governor of California, Don Pio de Jesus Pico, who built his country home, El Ranchito, along the San Gabriel River. Over the years the two communities grew close, eventually incorporating as one in 1958. The year 2008 marks Pico Rivera's 50th anniversary. This volume documents Pico Rivera from its agricultural past, through its transformation, and into modern suburbia.

[Ford Big-Block Parts Interchange](#) Jun 01 2022 Over the course of performance car history, and specifically muscle car history, big-block engines are particularly beloved, and for good reason. Not only are they the essence of what a muscle car is, but before modern technology and stroker engines, they were also the best way to make a lot of horsepower. All of the Detroit manufacturers had their versions of big-block engines, and Ford was no exception. Actually, Ford was somewhat unique in that it had two very different big-block engine designs during the muscle car era. The FE engine was a design pioneered in the late 1950s, primarily as a more powerful replacement for the dated Y-block design because cars were becoming bigger and heavier, and therefore, necessitated more power to move. What started as torque engines meant to move heavy weight sedans morphed into screaming high-performance mills that won Le Mans and drag racing championships through the 1960s. By the late 1960s, the design was dated, so Ford replaced the FE design with the "385" series, also known as the "Lima" design, which was more similar to the canted-valve Cleveland design being pioneered at the same time. It didn't share the 1960s pedigree of racing success, but the new design was better in almost every way; it exists via Ford motorsports offerings to this day. In Ford Big-Block Parts Interchange, Ford expert and historian George Reid covers both engines completely. Interchange and availability for all engine components are covered including cranks, rods, pistons, camshafts, engine blocks, intake and exhaust manifolds, carburetors, distributors, and more. Expanding from the previous edition of High-Performance Ford Parts Interchange that covered both small- and big-block engines in one volume, this book cuts out the small-block information and devotes every page to the FE Series and 385 big-blocks from Ford, which allows for more complete and extensive coverage. p.p1 {margin: 0.0px 0.0px 0.0px; font: 12.0px Arial}

Founders of American Industrial Design Jul 30 2019 As the Great Depression started in 1929, several dozen creative individuals from a variety of artistic fields, including theatre, advertising, graphics, fashion and furniture design, pioneered a new profession. Responding to unprecedented public and industry demand for new styles, these artists entered the industrial world during what was called the "Machine Age," to introduce "modern design" to the external appearance and form of mass-produced, functional, mechanical consumer products formerly not considered art. The popular designs by these "machine designers" increased sales and profits dramatically for manufacturers, which helped the economy to recover; established a new profession, industrial design; and within a decade, changed American products from mechanical monstrosities into sleek, modern forms expressive of the future. This book is about those industrial designers and how they founded, developed, educated and organized today's profession of more than 50,000 practitioners.
