Database Sockets and Web Application Development Jan 07 2021 Patrick M. Benson originated database sockets, enabling enterprise-scale and e-commerce capable web systems. In the mid-1990's he gave four national presentations and presented two papers detailing how n-tier web systems could be built and the role database sockets played. These became part of the web developer's toolbox. This collection pulls together for the first time all six documents. It includes contemporaneous speaker notes, updates to the papers and presentations notes reflecting questions and answers at the conferences, and update comments from June 2012. Included are: • "Perl as a System Glue" from the First O'Reilly Perl Conference. The paper and presentation are the genesis of database sockets and distributed computing in UNIX and related open source tools. • "OASIS – A Web Based Fixed Assets System" from the Indiana University 1998 WebDevShare conference. The paper and presentation that provided the first deep technical details describing how database sockets worked. It includes the C-code necessary to implement server side database sockets. • "OASIS – A Web Based Fixed Assets System" from the 1998 EduComm/EduCause national conference. Here Benson provided a management view into sample systems and web development and activities. This includes Benson's Best Practices model • "Performance Driven Design Issues in Web Development" from the 1999 WebDevShare conference. This presentation addressed challenges of moving web systems from development into production. Here Benson introduced both real-world n-tier, multiport and multithread sockets as a solution to issues faced by web developers.

Applications and Innovations in Expert Systems VI Sep 27 2022 R. MILNE Intelligent Applications Ltd The papers in this volume are the Application Papers presented at ES98, the Eighteenth International Conference of the British Computer Society's Specialist Group on Expert Systems. This year has been yet another "applications" success for the conference with this volume containing seventeen papers describing either deployed applications or emerging applications. All these documented case studies provide clear evidence of the success of AI technology in solving real business problems. Six of these papers were nominated for the Best Application Award during the review process. These nominations were then reviewed by the members of the Programme Committee to select the winning paper. The papers in the volume were subject to refereeing by at least two referees. All papers which were controversial for some reason were discussed in depth by the Application Programme Committee. Ten referees from the industrial and commercial sector and nine referees from the academic sector assisted me in reviewing the papers. The review form asked the referee to score the papers according to a number of dimensions, to rate it overall, and to offer critical comments to me, and to the authors. It also asks the referee to score their expertise in the area of each paper they review. Only reviews from 'expert' referees are used.

Multi-Agent Systems and Applications IV Aug 14 2021 The aim of the CEEMAS conference series is to provide a biennial forum for the presentation of multi-agent research and development results. With its particular geographical orientation towards Central and Eastern Europe, CEEMAS has become an internationally recognised event with participants from all over the world. After the successful CEEMAS conferences in St. Petersburg (1999), Cracow (2001) and Prague (2003), the 2005 CEEMAS conference takes place in Budapest. The programme committee of the conference series consists of established researchers from the region and renowned international colleagues, sharing the prominent rank of CEEMAS among the leading events in multi-agent systems. In the very competitive field of agent oriented conferences and workshops nowadays (such as AAMAS, WI/IAT, EUMAS, CIA, MATES) the special profile of CEEMAS is that it is trying to bridge the gap between applied research achievements and theoretical research activities. Our ambition is to provide a forum for presenting

theoretical research with an evident application potential, implemented application prototypes and their properties, as well as industrial case studies of successful (but also unsuccessful) agent technology deployments. This is why the CEEMAS proceedings volume provides a collection of research and application papers. The technical research paper section of the proceedings (see pages 11–499) contains pure research papers as well as research results in application settings while the application papers section (see pages 500–530) contains papers focused on application aspects. The goal is to demonstrate the real life value and commercial reality of multi-agent systems as well as to foster communication between academia and industry in this field.

Indicators and Test-Papers Nov 17 2021 Excerpt from *Indicators and Test-Papers: Their Source, Preparation, Application, and Test for Sensitiveness* Much has been written on indicators within the last twenty years in the various journals, etc., devoted to chemistry and pharmacy. No systematic arrangement, however, appears to have been made of the facts recorded by a host of observers, which would present the busy worker with the widely scattered information in the form of a succinct yet comprehensive compilation. The purpose of this work is, hence, to present an up-to-date resume of the knowledge regarding the various substances which have been proposed for use from time to time as indicators, so far as their preparation, properties, application, etc., are concerned. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.com This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works."

Digital Computer Applications to Process Control Aug 02 2020 Considers the application of modern control engineering on digital computers with a view to improving productivity and product quality, easing supervision of industrial processes and reducing energy consumption and pollution. The topics covered may be divided into two main subject areas: (1) applications of digital control - in the chemical and oil industries, in water turbines, energy and power systems, robotics and manufacturing, cement, metallurgical processes, traffic control, heating and cooling; (2) systems theoretical aspects of digital control - adaptive systems, control aspects, multivariable systems, optimization and reliability, modelling and identification, real-time software and languages, distributed systems

and data networks. Contains 84 papers.
