Sol-Gel Chemistry Applied to Materials Science Jul 01 2020 Sol-gel technology is a contemporary advancement in science that requires taking a multidisciplinary approach with regard to its various applications. This book highlights some applications of the sol-gel technology, including protective coatings, catalysts, piezoelectric devices, wave guides, lenses, high-strength ceramics, superconductors, synthesis of nanoparticles, and insulating materials. In particular, for biotechnological applications, biomolecules or the incorporation of bioactive substances into the sol-gel matrix has been extensively studied and has been a challenge for many researchers. Some sol-gel materials are widely applied in light-emitting diodes, solar cells, sensing, catalysis, integration in photovoltaic devices, and more recently in biosensing, bioimaging, or medical diagnosis; others can be considered excellent drug delivery systems. The goal of an ideal drug delivery system is the prompt delivery of a therapeutic amount of the drug to the proper site in the body, where the desired drug concentration can be maintained. The interactions between drugs and the sol-gel system can affect the release rate. In conclusion, the sol-gel synthesis method offers mixing at the molecular level and is able to improve the chemical homogeneity of the resulting composite. This opens new doors not only regarding compositions of previously unattainable materials, but also to unique structures with different applications.

Role of the Adipocyte in Development of Type 2 Diabetes Mar 09 2021 Adipocytes are important in the body for maintaining proper energy balance by storing excess energy as triglycerides. However, efforts of the last decade have identified several molecules that are secreted from adipocytes, such as leptin, which are involved in signaling between tissues and organs. These adipokines are important in overall regulation of energy metabolism and can regulate body composition as well as glucose homeostasis. Excess lipid storage in tissues other than adipose can result in development of diabetes and nonalcoholic fatty liver disease (NAFLD). In this book we review the role of adipocytes in development of insulin resistance, type 2 diabetes and NAFLD. Because type 2 diabetes has been suggested to be a disease of inflammation we included several chapters on the mechanism of inflammation modulating organ injury. Finally, we conclude with a review on exercise and nutrient regulation for the treatment of type 2 diabetes and its co-morbidities.

Dietary Intake and Type 2 Diabetes Feb 20 2022 The prevalence of diabetes is on the increase in the UK and worldwide, partly due to changes in lifestyle which predispose individuals to overweight and obesity. It is estimated that about 90% of the currently diagnosed adults have type 2 diabetes, and based on the World Health Organisation (WHO) report, about 422 million adults were living with diabetes in 2014 compared with 108 million in 1980; this condition caused about 1.5 million deaths in 2012. In the United States of America, it is estimated that about 30.3 million adults are living with diabetes, with a further 1.5 million new diabetes cases diagnosed every year, representing an increasing prevalence of this condition. Diabetes represents a major public health challenge, despite advances in technology and the pharmaceutical industry. These problems may be in the form of acute or long-term complications. Therefore, in order to attenuate the problems of diabetes, management strategies usually include lifestyle changes such as increased physical activity and dietary interventions. Studies which evaluate the role of nutrition in the management of type 2 diabetes often involve human and animal models as these approaches enable us to have a broader and more in-depth understanding of the condition. In some cases, diabetes may co-exist with other conditions, such as stroke, and these may present unique challenges with regard to nutritional interventions. This Special Issue aims to evaluate the risk factors associated with type 2 diabetes and the role of the diet in the management of people with this condition. This evidence is drawn from both human and animal studies.

Pediatric Laboratory Medicine Jan 27 2020 A complete full-color guide to medical laboratory test selection and test result interpretation for disorders and diagnoses specific to pediatric and neonatal populations Laboratory medicine practiced at a pediatric institution has unique characteristics specific to infants and children, who differ both metabolically and biochemically from adults. Many aspects of laboratory medicine are affected by these differences, from basic, day-to-day operational issues through test selection for pediatric-specific disorders. However, most references in laboratory medicine merely touch upon pediatrics – and offer little if any coverage of variations in testing and results for different age groups, or the many diseases and disorders most common in infants and children. Pediatric Laboratory Medicine is specifically written to fill this critical void in the literature. Now, for the first time, all important reference material concerning pediatric laboratory medicine is available in one convenient, up-to-date resource. Pediatric Laboratory Medicine teaches the effective operation of a pediatric clinical operation, and also provides guidelines for teaching trainees. This unique text delivers the how-to instruction necessary to ensure proper handling and testing of pediatric specimens to ensure accurate diagnosis. Valuable learning aids include learning objectives, end-of-chapter review questions, and references for further study. Written by experienced clinicians, the book's seventeen chapters cover virtually every important topic – from daily issues in the practice of pediatric laboratory medicine to common tests and considerations to inborn errors of metabolism and therapeutic drug monitoring. Enhanced by numerous tables and high-quality full-color images, this authoritative resource delivers everything necessary for effective pediatric laboratory medicine training and practice.
