**Introduction to
Sustainability Analytics** Sep
20 2021 The roles of corporate
and public stewards and the

nature of their social contract
with society have been
changing over the past two
centuries, and those changes
have accelerated in recent
decades. Moreover, with
increasing focus on
sustainability factors from the
marketplace (regulators,
investors, financiers, and
consumers), corporate
sustainability disclosure is
shifting from voluntary to vital.
Corporate and public stewards
are now responsible for their
performance and services from
cradle-to-grave: they must
properly manage corporate
social responsibility and
integrate it into their global
strategies, rather than consider
it as merely a moral obligation

or a risk/reputation management exercise. Sustainability analytics, the critical link between sustainability and business strategy, helps professionals track, trend, and transform sustainability information into actionable insights across the value chain and life cycle, to enhance their sustainability performance and its disclosure. This book, Introduction to Sustainability Analytics, provides corporate and public stewards with a comprehensive understanding of how to determine which sustainability metrics are material to them and relevant to their business, and how to incorporate them into corporate strategy,

How Molecular Forces and Rotating Planets Create Life

Jan 25 2022 A

reconceptualization of origins research that exploits a modern understanding of non-covalent molecular forces that stabilize living prokaryotic cells.

Scientific research into the origins of life remains exploratory and speculative. Science has no definitive answer to the biggest questions--"What is life?" and "How did life begin on earth?"

In this book, Jan Spitzer reconceptualizes origins research by exploiting a modern understanding of non-covalent molecular forces and

covalent bond formation--a physicochemical approach propounded originally by Linus Pauling and Max Delbrück. Spitzer develops the Pauling-Delbrück premise as a physicochemical jigsaw puzzle that identifies key stages in life's emergence, from the formation of first oceans, tidal sediments, and proto-biofilms to progenotes, proto-cells and the first cellular organisms.
