Contagion and Enclaves Mar 05 2020
Contagion and Enclaves examines the social history of medicine across two intersecting British enclaves in the major tea-producing region of colonial India: the hill station of Darjeeling and the adjacent tea plantations of North Bengal. Focusing on the establishment of hill sanatoria and other health care facilities and practices against the backdrop of the expansion of tea cultivation and labor migration, it tracks the demographic and environmental transformation of the region and the critical role race and medicine played in it, showing that the British enclaves were essential and distinctive sites of the articulation of colonial power and economy.

Contactless Vital Signs Monitoring Jun 19 2021

Vital signs, such as heart rate and respiration rate, are useful to health monitoring because they can provide important physiological insights for medical diagnosis and well-being management. Most traditional methods for measuring vital signs require a person to wear biomedical devices, such as a capnometer, a pulse oximeter, or an electrocardiogram sensor. These contact-based technologies are inconvenient, cumbersome, and uncomfortable to use. There is a compelling need for technologies that enable contact-free, easily deployable, and long-term monitoring of vital signs for healthcare. *Contactless Vital Signs Monitoring* presents a systematic and in-depth review on the principles, methodologies, and opportunities of using different wavelengths of an electromagnetic spectrum to measure vital signs from the human face and body contactlessly. The volume brings together pioneering researchers active in the field to report the latest progress made, in an intensive and structured way. It also presents various healthcare applications using camera and radio frequency-based monitoring, from clinical care to home care, to sport training and automotive, such as patient/neonatal monitoring in intensive care units, general wards, emergency department triage, MR/CT cardiac and respiratory gating, sleep centers, baby/elderly care, fitness cardio training, driver monitoring in automotive settings, and more. This book will be an important educational source for biomedical researchers, AI healthcare researchers, computer vision researchers, wireless-sensing researchers, doctors/clinicians, physicians/psychologists, and medical equipment

Strategy That Works Jun 27 2019 How to close the gap between strategy and execution Two-thirds of executives say their organizations don't have the capabilities to support their strategy. In *Strategy That Works*, Paul Leinwand and Cesare Mainardi explain why. They identify conventional business practices that unintentionally create a gap between strategy and execution. And they show how some of the best companies in the world consistently leap ahead of their competitors. Based on new research, the authors reveal five practices for connecting strategy and execution used by highly successful enterprises such as IKEA, Natura, Danaher, Haier, and Lego. These companies:

- Commit to what they do best instead of chasing multiple opportunities
- Build their own unique winning capabilities instead of copying others
- Put their culture to work instead of struggling to change it
- Invest where it matters instead of going lean across the board
- Shape the future instead of reacting to it

Packed with tools you can use for building these five practices into your organization and

Grandparents/Grandchildren Apr 29 2022 In this book Kornhaber and Woodward explore the vital connections which link generations to each other and expose a new social contract that destroys the emotional bonds between grandparents and grandchildren., This is the first book which reviews, in a careful ethnographic manner, the relationship of grandchildren to grandparents and the place of love at one end and abandonment at the other by grandparents. The authors probe the deep, unexplored emotional histories of hundreds of grandparents; how they feel about themselves, their grandchildren, and their loss of function within today's nuclear family., With sharp increases in the number of broken families and working mothers, grandparents are more vital than ever and also more available than ever. This basic research document shows how grandparents recover their natural role as elders of the family and of society. The author's basic premise is that to exist is to be connected, and that no matter how grandparents act, they affect the emotional well-being of their grandchildren, for better or for worse, simply because they exist., In an age when mounting economic and social pressures make it increasingly easier to split a family than to sustain one, the authors alert us to a forgotten source of family strength, the power of grandparents to enrich the lives as a whole. The case studies reported in this volume represent a first effort in an area left unexplored by developmental researchers. There are lessons here for social scientists, but even more for our alienated society.—Urie Bronfenbrenner, Cornell University

learning and teaching mathematics. The book consists of nine chapters, seven from each of seven scholars who participated in an invited lecture series (Scholars in Mathematics Education) at Brigham Young University, and two chapters from two other scholars who are writing reaction papers that look across the first seven chapters. The recommendations take the form of broad, overarching principles and ideas that cut across the field. In this sense, this book differs from classical "research agenda projects," which seek to outline specific research questions that the field should address around a central topic.

Black Internationalist Feminism Jan 15 2021

Black Internationalist Feminism examines how African American women writers affiliated themselves with the post-World War II Black Communist Left and developed a distinct strand of feminism. This vital yet largely overlooked feminist tradition built upon and critically retheorized the postwar Left's "nationalist internationalism," which connected the liberation of Blacks in the United States to the liberation of Third World nations and the worldwide proletariat. Black internationalist feminism critiques racist, heteronormative, and masculinist articulations of nationalism while maintaining the importance of national liberation movements for achieving Black women's social, political, and economic rights. Cheryl Higashida shows how Claudia Jones, Lorraine Hansberry, Alice Childress, Rosa Guy, Audre Lorde, and Maya Angelou worked within and against established literary forms to demonstrate that nationalist internationalism was linked to struggles against heterosexism and patriarchy. Exploring a diverse range of plays, novels, essays, poetry, and reportage, Higashida illustrates how literature is a crucial lens for studying Black internationalist feminism because these authors were at the forefront of bringing the perspectives and problems of black women to light against their marginalization and silencing. In examining writing by Black Left women from 1945-1995, Black Internationalist Feminism contributes to recent efforts to rehistoricize the Old Left, Civil Rights, Black Power, and second-wave Black women's movements.

Without it, we would still be laying eggs instead of giving birth to live offspring. It represents the critical link between the foetus and the mother, but its character is extraordinary — it is, in effect, a foreign tissue that invades the mother's body. Compared to many other animals, the human placenta represents a particularly aggressive body. But how is it managed and controlled? How did such an organ evolve in the first place? And why is it tolerated by the mother? Y.W. Loke explores the nature of the placenta and what it can tell us about evolution, development, and genetics.

The Vital Question Apr 17 2021 Why is life the way it is? Bacteria evolved into complex life just once in four billion years of life on earth-and all complex life shares many strange properties, from sex to ageing and death. If life evolved on other planets, would it be the same or completely different? In *The Vital Question*, Nick Lane radically reframes evolutionary history, putting forward a cogent solution to conundrums that have troubled scientists for decades. The answer, he argues, lies in energy: how all life on Earth lives off a voltage with the strength of a bolt of lightning. In unravelling these scientific enigmas, making sense of life's quirks, Lane's explanation provides a solution to life's vital questions: why are we as we are, and why are we here at all? This is ground-breaking science in an accessible form, in the tradition of Charles Darwin's *The Origin of Species*, Richard Dawkins' *The Selfish Gene*, and Jared Diamond's *Guns, Germs and Steel*.

Achieving the Paris Climate Agreement

Goals Jul 09 2020 This open access book presents detailed pathways to achieve 100% renewable energy by 2050, globally and across ten geographical regions. Based on state-of-the-art scenario modelling, it provides the vital missing link between renewable energy targets and the measures needed to achieve them. Bringing together the latest research in climate science, renewable energy technology, employment and resource impacts, the book breaks new ground by covering all the elements essential to achieving the ambitious climate mitigation targets set out in the Paris Climate Agreement. For example, sectoral implementation pathways, with special emphasis on differences between developed and developing countries and regional conditions, provide tools to implement the scenarios globally and domestically. Non-energy greenhouse gas mitigation scenarios define a sustainable pathway for land-use change and the agricultural sector. Furthermore, results of the impact of the scenarios on employment and mineral and resource requirements provide vital insight on economic and resource management implications. The book clearly demonstrates that the goals of the Paris Agreement are achievable and feasible with current technology and are

The Vital Link Aug 02 2022 To maintain the link of communication between battlefields and HQ, between commanders and soldiers, between physically distant Corps is the vital job of the Royal Signal. But the responsibility of the Signals extends beyond the logistical requirements of inter-personal contact Electronic Intelligence and Electronic Warfare are major departments within the organisation, each of which supports the other. The Vital Link examines these diverse aspects and traces the complex developments in techniques, technology and signals tactics since the Second World War. The book, however, is more an historical story than an exhaustive tract for reference purposes. It records the growth of the Signals through its people, the 'high quality' ordinary soldier to the odd character, all of whom help to define the Royal Signals. With anecdotes from individual's achievements, both personal and professional, the history of this essentially military branch is presented in an accessible and enjoyable manner.

Manufacturing Works Nov 12 2020 Behind Manufacturing Works there is one simple premise: America's manufacturing base drives its prosperity. The industrial sector is special because of its size, its ability to generate innovation and value, its importance to national security, its role in meeting people's wants and needs, and the dignity of the work it provides for 17 million Americans. The combined problems of a worsening US trade balance, mounting layoffs, and uncertainties in financial markets are heightening the need to strengthen the U.S. industrial base in order to sustain the prosperity the nation has enjoyed in recent years. The authors take a hard look at this often unappreciated section in 232 countries. They build their case through concise research, scores of interviews, and many visits to factory floors.

Antonin Artaud and the Healing Practices of Language May 07 2020 The life of Antonin Artaud (1896-1948) was tormented by physical and mental illnesses. Already in his earlier works, Artaud tried to express his physical and mental suffering, but perceived, in describing his feelings, the obstructive and illness-inducing role of language. This is the first book written in English that analyses the role of a healing language with which Artaud engaged in his later writings. Joeri Visser guides us through the years in which Artaud suffered increasingly from mental instability and considered the act of writing his only means of survival. In doing so, Visser unfolds a literary and a philosophical analysis of how language and life work together and how a creative play with language can help us to reengage sustainably with the joyous as well as the terrible forces of life.

Application of Infrared Thermography in Sports Science Dec 02 2019 This book addresses the application of infrared thermography in sports, examining the main benefits of this non-invasive, non-radiating and low-cost technique. Aspects covered include the detection of injuries in sports medicine, the assessment of sports performance due to the existing link between physical fitness and thermoregulation and the analysis of heat transfer for sports garments and sports equipment. Although infrared thermography is broadly considered to be a fast and easy-to-use tool, the ability to deliver accurate and repeatable measurements is an important consideration. Furthermore, it is important to be familiar with the latest sports studies published on this technique to understand its potential and limitations. Accordingly, this book establishes a vital link between laboratory tests and the sports field.

Aviation and Tourism Feb 13 2021 Transport is an essential element of tourism, providing the vital link between the tourist generating areas and destinations. Good accessibility, which is determined by the transport services provided, is a fundamental condition for the development of any tourist destination. Moreover the transport industry can be a major beneficiary of tourism because of the additional passenger demand that may be generated. Aviation is an increasingly important mode of transport for tourism markets. Whilst geography has meant that, in modern times, air travel has always been the dominant mode for long distance travel and much international tourism, moves towards

deregulation, and in particular the emergence of the low cost carrier sector, have also increased aviation's significance for short and medium haul tourism trips. Thus developments in aviation can have very major implications for many leisure and business tourism markets. However the characteristics and needs of leisure travellers are generally so very different from business travellers that this necessitates a separate consideration of these markets if a detailed understanding of the relationship with aviation is to be gained. In spite of the obvious closeness between the aviation and tourism industries, there are very few specialist texts on this subject. Most tourism focused books consider aviation as just one component of the tourism industry which needs to be discussed, whereas aviation specialist texts rarely concentrate on just leisure travel. In addition there is very little literature that gives a detailed appreciation of the complexities and potential conflicts associated with the development of coherent and effective aviation and tourism policies. Therefore it is the aim of this book to fill this important gap which exists with a comprehensive, in-depth study of the relationship between aviation and leisure travel. The book deals exclusively with issues related to the relationship between aviation and leisure travel. It does this with an analysis of the theoretical concepts relevant to the subject area combined with a detailed investigation of current practice within the aviation and tourism industries. Each chapter is illustrated with case study material that will reinforce the understanding of the issues that are being examined.

International Handbook of Research on Environmental Education Jan 03 2020 The environment and contested notions of sustainability are increasingly topics of public interest, political debate, and legislation across the world. Environmental education journals now publish research from a wide variety of methodological traditions that show linkages between the environment, health, development, and education. Autistic Community and the Neurodiversity Movement Apr 05 2020 This open access book marks the first historical overview of the autism rights branch of the neurodiversity movement, describing the activities and rationales of key leaders in their own words since it organized into a unique community in 1992. Sandwiched by editorial chapters that include critical analysis, the book contains 19 chapters by 21 authors about the forming of the autistic community and neurodiversity movement, progress in their influence on the broader autism community and field, and their possible threshold of the advocacy establishment. The actions covered are legendary in the autistic community, including manifestos such as "Don't Mourn for Us", mailing lists, websites or webpages, conferences, issue campaigns, academic project and journal, a book, and advisory roles. These actions have shifted the landscape toward viewing autism in social terms of human rights and identity to accept, rather than as a medical collection of deficits and symptoms to cure.

Film Marketing Oct 12 2020 The role of the film marketer is both vital and challenging. Promotion is one of the industry's biggest costs, with the campaign of a large film costing up to half its production budget. Box office results, however, are wildly unpredictable: relatively few films a year make a profit. These market conditions make this a unique industry and film marketing a specific and demanding skill set that requires attention early in the career of any marketing student looking to progress in the industry. This new edition of Film Marketing is a thorough update of the first textbook in film promotion. Like in the first edition, Kerrigan takes a socio-cultural, as well as a business view of film marketing and its impact, covering different approaches to promotion according to different aims and audiences internally and externally, and across the world. Quantified Lives and Vital Data Jun 07 2020 This book raises questions about the changing relationships between technology, people and health. It examines the accelerating pace of technological development and a general shift to personalized, patient-led medicine. Such relationships are increasingly mediated through

particular medical technologies, drawn together by the authors as 'personal medical devices' (PMDs) - devices that are attached to, worn by, interacted with, or carried by individuals for the purposes of generating biomedical data and carrying out medical interventions on the person concerned. The burgeoning PMD field is advancing rapidly across multiple domains and disciplines - so rapidly that conceptual and empirical research and thinking around PMDs, and their clinical, social and philosophical implications, often lag behind new technical developments and medical interventions. This timely and original volume explores the significant and under-researched impact of personal medical devices on contemporary understandings of health and illness. It will be a valuable read for scholars and practitioners of medicine, health, science and technology and social science.
