Testing Second Language Speaking May 05 2020 The testing and assessment of second language learners is an essential part of the language learning process. Glenn Fulcher's *Testing Second Language Speaking* is a state-of-the-art volume that considers the assessment of speaking from historical, theoretical and practical perspectives. The book offers the first systematic, comprehensive and up-to-date treatment of the testing of second language speaking. Written in a clear and accessible manner, it covers: Explanations of the process of test design Costing test design projects How to put the test into practice Evaluation of speaking tests Task types for testing speaking Testing learners with disabilities It also contains a wealth of examples, including task types that are commonly used in speaking tests, approaches to researching speaking tests and specific methodologies that teachers, students and test developers may use in their own projects. Successfully integrating practice and theory, this book demystifies the process of testing speaking and provides a thorough treatment of the key ethical and technical issues in speaking evaluation.

Directory of Federal Laboratory and Technology Resources Apr 15 2021 Describes the individual capabilities of each of 1,900 unique resources in the federal laboratory system, and provides the name and phone number of each contact. Includes government laboratories, research centers, testing facilities, and special technology information centers. Also includes a list of all federal laboratory technology transfer offices. Organized into 72 subject areas. Detailed indices.

U.S. Postal Exam Test 470 for City Carrier, Clerk, Distribution Clerk, Flat Sorting Machine Operator, Mail Handler, Mail Processor, Mark Up Clerk Jan 25 2022 In 1994 the U.S. Post Office developed a new test for all postal applicants, making the former tests and test taking books obsolete. This is the only book on the market with the new Test 470 United States Postal Service Examination. This is a must-have book for anyone contemplating taking the Postal Service examination. Generally, candidates need to score 95 on the exam to get a job. This book can help the reader achieve that score or better. This year the U.S. Postal Service will hire over 200,000 workers. Starting pay is more than \$12 per hour and benefits and job security are excellent. No wonder hundreds of thousands of people a year sign up to take the Postal Exam. Here is prep for the exam, including 10 actual sample tests. The difference between getting a job and not can be as little as one point on the exam. This book can easily make that difference.

When Computers Went to Sea Apr 27 2022 *When Computers Went to Sea* explores the history of the United States Navy's secret development of code-breaking computers and their adaptation to solve a critical fleet radar data handling problem in the Navy's first seaborne digital computer system - that went to sea in 1962. This is the only book written on the United States Navy's initial application of shipboard digital computers to naval warfare. Considered one of the most successful projects ever undertaken by the US Navy, the Naval Tactical Data System (NTDS) was the subject of numerous studies attempting to pinpoint the reason for the systems inordinate success in the face of seemingly impossible technical challenges and stiff resistance from some in the military. The system's success precipitated a digital revolution in naval warfare systems. Dave Boslaugh details the innovations developed by the NTDS project managers including: project management techniques, modular digital hardware for ship systems, top-down modular computer programming techniques, innovative computer program documentation, and other novel real-time computer system concepts. Automated military systems users and developers, real-time process control systems designers, automated system project managers, and digital technology history students will find this account of a United States military organization's initial foray into computerization interesting and thought provoking.

Novell's Guide to Storage Area Networks and Novell Cluster Services Dec 12 2020 This is the first comprehensive book to cover Novell's hot new clustering and storage area network solutions -- a security, collaboration and 100% high-availability must for any business. The book is a modular, comprehensive look at the design of SAN's and clusters. Also included are solutions supported by NCS, NCS and SAN features, functions, implementation and troubleshooting and configuration within the SAN and cluster. The authors have taken a unique, modular approach in the book so in cases where perhaps SAN's are being implemented in a mixed NetWare and Microsoft Windows 2000 operating system environment to share an Oracle database.

Computerized Adaptive Testing May 17 2021 Modern computer technology has opened up several new possibilities for optimizing the administration of educational and psychological tests. In computer adaptive testing (CAT), tests are automatically tailored to the proficiency level of the individual examinees. Currently, nearly all large-scale testing programs in the western world are already adaptive or in the process of becoming so. Written by active CAT researchers from Europe and North America, the chapters offer a comprehensive introduction to the latest developments in the theory and practice of CAT. The book can be used both as a basic reference on the state of the art in CAT and a valuable resource in graduate courses on test theory. The theoretical chapters in this book cover such topics as item selection and ability estimation, item pool development and maintenance, item calibration and model fit, and testlet-based adaptive testing. The practical chapters describe the operational aspects of existing large-scale CAT programs.
