Lives in Transit Jan 28 2020 This book explores the border-crossing mobilities of refugees within Europe. Based on ethnographic fieldwork in Germany and Italy, it examines the precarious everyday lives of non-citizens living between and beyond EU internal borders. With attention to the constant reconstruction of borders within Europe through negotiation practices, the author shows how the tensions that exist between refugees on the move and the structural constraints that limit their movement produce 'interstices' - small spaces of possibility that open up as a result of refugees' struggling within structural constraints. A comprehensive understanding of the long-term effects of EU borders upon refugees' lives is then afforded through a particular focus on the post-arrival period. Examining the protracted precariousness and multi-directional hyper-mobility in Europe that emerges from the dynamics of the relation between structural mechanisms and the agency of individuals, *Lives in Transit* reveals how the border regime in Europe impacts mostly upon the temporal rather than the spatial dimensions of refugees' lives, affecting their subjectivities and sense of self. This 'dispossession' of time is advocated as the main problem with the experience of refugees in Europe, causing them to claim a temporal justice, which seeks to gain back control of their own lives and personhood. Calling for migration to be understood as a process of 'becoming subjects', this volume will appeal to scholars of sociology, anthropology, and politics with interests in migration and diaspora studies.

("ballastless") track, and embedded track. The report considers the characteristics and interfaces of vehicle wheels and rail, tracks and wheel gauges, rail sections, alignments, speeds, and track moduli. The report includes chapters on vehicles, alignment, track structures, track components, special track work, aerial structures/bridges, corrosion control, noise and vibration, signals, traction power, and the integration of LRT track into urban streets.

The Transit Of Venus Oct 19 2021 Caro, gallant and adventurous, is one of two Australian sisters who have come to post-war England to seek their fortunes. Courted long and hopelessly by young scientist, Ted Tice, she is to find that love brings passion, sorrow, betrayal and finally hope. The milder Grace seeks fulfilment in an apparently happy marriage. But as the decades pass and the characters weave in and out of each other's lives, love, death and two slow-burning secrets wait in ambush for them.

Understanding how Individuals Make Travel and Location

Decisions Dec 09 2020 TCRP Report 123: Understanding How Individuals Make Travel and Location Decisions: Implications for Public Transportation explores a broader social context for individual decision making related to residential location and travel behavior and consequently will be of interest to planners, researchers, transit managers, and decision makers. The findings from this research contribute to efforts to predict mode choice and how to influence it through better policies and design, education, and communication.

Transit Crime and Sexual Violence in Cities Apr 12 2021 How cities are planned and designed has a major impact on individuals' mobility and safety. If individuals feel unsafe in public transportation or on the way to it, they may avoid certain routes or particular times of the day. This is problematic, since research has also found that, in some cities, especially those in the Global South, a large percentage of women are "transit captives".

Namely, they have relatively less access to non-public forms of transportation and are, therefore, especially reliant on public transport. This issue is important not only because it affects people's safety but also because it influences the long-term sustainability of a city. In a sustainable city, safety guarantees the ability to move freely for everyone and provides a wider sense of place attachment. *Transit Crime and Sexual Violence in Cities* examines the evidence of victimization in transit environments in countries around the world, exploring individuals' feelings of perceived safety or lack thereof and the necessary improvements that can make transit safer and, hence, cities more sustainable. The book's contributions are grounded in theories at the crossroads of several disciplines such as environmental criminology, architecture and design, urban planning, geography, psychology, gender and LGBTQI studies, transportation, and law enforcement. International case studies include Los Angeles, Vancouver, Stockholm, London, Paris, São Paulo, Mexico City, Bogotá, Tokyo, Guangzhou, Melbourne, and Lagos, among others. *Travel Writing and Empire* Sep 17 2021 Travel writing has become central to postcolonial studies. This book provides an introduction to the genre, particularly to its dynamics of power and representation, and the degree to which it has promoted ideologies of empire. The book combines detailed evaluations of major contemporary models of analysis - new historicism, travelling theory, and post-colonial studies - with a series of specific studies detailing the complicity of the genre with a history of violent incursion from Columbus' reports from the New World through to the nomadism of postmodern travelogue. Among its particular areas of concern are* 'Othering' discourses - of cannibalism and infanticide* the production of colonial knowledge - geographic, medicinal, zoological* the role of sexual anxiety in the construction of the gendered, travelling body* the interplay between imperial and domestic spheres* reappropriation of alien ~~Discourse~~ indigenous cultures. Post-colonial studies has

concentrated on travellers as conduits of erasure and appropriation. This book resists the temptation to think in terms of a simple monolithic Eurocentrism and offers a more complex reading of texts produced before, during and after periods of imperial ascendancy. In doing so, it provides a more nuanced account of the hegemonic functions of travel-writing. As such it is necessary reading for students and academics of cultural studies, literary theory, anthropology and history.

Philosophy, Travel, and Place Apr 24 2022 This book continues the exploration of themes either neglected or devalued by others working in the field of philosophy and culture. The authors in this volume consider the domain of travel from the broadest and most diverse of philosophical perspectives, covering everyday topics ranging from commuting and vacation travel to immigration and forced relocation. Our time in transit, our being in transit, and our time at rest, whether by choice or edict, has always been at issue, always been at play (and has always been in motion, if you will), for our species. The essays collected here explore the possibilities of the material impact of being able to move or stay put, as well as being forced to go or prevented from leaving.

is the first and only comprehensive collection of historic and current maps of every rapid-transit system on earth. Using glorious, colorful graphics, Mark Ovenden traces the history of mass transit-including rare and historic maps, diagrams, and photographs, some available for the first time since their original publication. Transit Maps is the graphic designer's new bible, the transport enthusiast's dream collection, and a coffee-table essential for everyone who's ever traveled in a city.

Transit Life Jan 22 2022 An exploration of the ways that everyday life in the city is defined by commuting. We spend much of our lives in transit to and from work. Although we might dismiss our daily commute as a wearying slog, we rarely stop to think about the significance of these daily journeys. In Transit Life, David Bissell explores how everyday life in cities is increasingly defined by commuting. Examining the overlooked events and encounters of the commute, Bissell shows that the material experiences of our daily journeys are transforming life in our cities. The commute is a time where some of the most pressing tensions of contemporary life play out, striking at the heart of such issues as our work-life balance; our relationships with others; our sense of place; and our understanding of who we are. Drawing on in-depth fieldwork with commuters, journalists, transit advocates, policymakers, and others in Sydney, Australia, Transit Life takes a holistic perspective to change how we think about commuting. Rather than arguing that transport infrastructure investment alone can solve our commuting problems, Bissell explores the more subtle but powerful forms of social change that commuting creates. He examines the complex politics of urban mobility through multiple dimensions, including the competencies that commuters develop over time; commuting dispositions and the social life of the commute; the multiple temporalities of commuting; the experience of commuting spaces, from footpath to on-ramp, both physical and digital; the voices of

interplay of materialities, ideas, advocates, and organizations in commuting infrastructures.

Mass Transit, Travel and Tourism Jul 16 2021

In Transit Dec 29 2019 This work examines the creation of an East Asian cultural sphere by the Japanese imperial project in the first half of the twentieth century. It seeks to re-read the “Greater East Asian Co-prosperity Sphere” not as a mere political and ideological concept but as the potential site of a vibrant and productive space that accommodated transcultural interaction and transformation. By reorienting the focus of (post)colonial studies from the macro-narrative of political economy, military institutions, and socio-political dynamics, it uncovers a cultural and personal understanding of life within the Japanese imperial enterprise. To engage with empire on a personal level, one must ask: What made ordinary citizens participate in the colonial enterprise? What was the lure of empire? How did individuals not directly invested in the enterprise become engaged with the idea? Explanations offered heretofore emphasize the potency of the institutional or ideological apparatus. Faye Kleeman asserts, however, that desire and pleasure may be better barometers for measuring popular sentiment in the empire—what Raymond Williams refers to as the “structure of feeling” that accompanied modern Japan’s expansionism. This particular historical moment disseminated common cultural perceptions and values (whether voluntarily accepted or forcibly inculcated). Mediated by a shared aspiration for modernity, a connectedness fostered by new media, and a mobility that encouraged travel within the empire, an East Asian contact zone was shared by a generation and served as the proto-environment that presaged the cultural and media convergences currently taking place in twenty-first-century Northeast Asia. The negative impact of Japanese imperialism on both nations and societies has been amply demonstrated and cannot be denied, but *In Transit* focuses on the opportunities and **Unique Experiences** it afforded a number of extraordinary

individuals to provide a fuller picture of Japanese colonial culture. By observing the empire—from Tokyo to remote Mongolia and colonial Taiwan, from the turn of the twentieth century to the postwar era—through the diverse perspectives of gender, the arts, and popular culture, it explores an area of colonial experience that straddles the public and the private, the national and the personal, thereby revealing a new aspect of the colonial condition and its postcolonial implications.

Human Transit Aug 29 2022 Public transit is a powerful tool for addressing a huge range of urban problems, including traffic congestion and economic development as well as climate change. But while many people support transit in the abstract, it's often hard to channel that support into good transit investments. Part of the problem is that transit debates attract many kinds of experts, who often talk past each other. Ordinary people listen to a little of this and decide that transit is impossible to figure out. Jarrett Walker believes that transit can be simple, if we focus first on the underlying geometry that all transit technologies share. In *Human Transit*, Walker supplies the basic tools, the critical questions, and the means to make smarter decisions about designing and implementing transit services. *Human Transit* explains the fundamental geometry of transit that shapes successful systems; the process for fitting technology to a particular community; and the local choices that lead to transit-friendly development. Whether you are in the field or simply a concerned citizen, here is an accessible guide to achieving successful public transit that will enrich any community.

their transit systems to accommodate this growth, reduce greenhouse gas emissions, and satisfy new demands for mobility and accessibility. Yet despite a burgeoning literature and various policy interventions in recent decades, we still understand little about what happens to neighborhoods and residents with the development of transit systems and the trend toward more compact cities. Research has failed to determine why some neighborhoods change both physically and socially while others do not, and how race and class shape change in the twenty-first-century context of growing inequality. Drawing on novel methodological approaches, this book sheds new light on the question of who benefits and who loses from more compact development around new transit stations. Building on data at multiple levels, it connects quantitative analysis on regional patterns with qualitative research through interviews, field observations, and photographic documentation in twelve different California neighborhoods. From the local to the regional to the global, Chapple and Loukaitou-Sideris examine the phenomena of neighborhood transformation, gentrification, and displacement not only through an empirical lens but also from theoretical and historical perspectives. Growing out of an in-depth research process that involved close collaboration with dozens of community groups, the book aims to respond to the needs of both advocates and policymakers for ideas that work in the trenches.

examination—separately or combined—offers a useful lens on many key questions about where globalization is taking us: questions about identity and heritage, commoditization, historical and cultural representation, hybridity, authenticity and ownership, neoliberalism, inequality, diasporization, the relocation of allegiances, and more. Moreover, for the first time, these two key phenomena—tourism and migration—are studied conjointly, as well as interdisciplinary, in order to derive both parallels and contrasts. While taking diverse perspectives in embracing the contemporary musical landscape, the collection offers a range of research methods and theoretical approaches from ethnomusicology, anthropology, cultural geography, sociology, popular music studies, and media and communication. In so doing, *Musics in Transit* provides a rich exemplification of the ways that all forms of musical culture are becoming transnational under post-global conditions, sustained by both global markets and musics in transit, and to which both tourists and diasporic cosmopolitans make an important contribution.

his crossing of Poland by bicycle, a family holiday to Petra, bullfights in Mexico City, a visit to the battlefield at Guadalcanal, where his father fought, and a trip to Palestinian refugee camps in Jordan. Written with humor, understanding and insight, Letters of Transit captures the imagination from the very first page.

Robot Systems for Rail Transit Applications Jun 14 2021

Robot Systems for Rail Transit Applications presents the latest advances in robotics and artificial intelligence for railway systems, giving foundational principles and running through special problems in robot systems for rail transit. State-of-the art research in robotics and railway systems is presented alongside a series of real-world examples. Eight chapters give definitions and characteristics of rail transit robot systems, describe assembly and collaborative robots in manufacturing, introduce automated guided vehicles and autonomous rail rapid transit, demonstrate inspection robots, cover trench robots, and explain unmanned aerial vehicles. This book offers an integrated and highly-practical way to approach robotics and artificial intelligence in rail-transit. Introduces robot and artificial intelligence (AI) systems for rail transit applications Presents research alongside step-by-step coverage of real-world cases Gives the theoretical foundations underlying practical application Offers solutions for high-speed railways from the latest work in robotics Shows how robotics and AI systems afford new and efficient methods in rail transit

Modelling Intelligent Multi-Modal Transit Systems Sep 29 2022

The growing mobility needs of travellers have led to the development of increasingly complex and integrated multi-modal transit networks. Hence, transport agencies and transit operators are now more urgently required to assist in the challenging task of effectively and efficiently planning, managing, and governing transit networks. A pre-condition for the development of an effective intelligent multi-modal transit system is the integration of information and communication technology (ICT) tools that will

this, reliable real-time simulation and short-term forecasting of passenger demand and service network conditions are required to provide both real-time traveller information and successfully synchronise transit service planning and operations control. Modelling Intelligent Multi-Modal Transit Systems introduces the current trends in this newly emerging area. Recent developments in information technology and telematics have enabled a large amount of data to become available, thus further attracting transport researchers to set up new models outside the context of the traditional data-driven approach. The alternative demand-supply interaction or network assignment modelling approach has improved greatly in recent years and has a crucial role to play in this new context.

Local Street Design and Transit Accessibility Jul 24 2019 This book explores into people's dependence on informal neighborhood transit in their key role that connects between people's residences inside the local street network and mainline transit on the main road. The study argues that such dependence is influenced by the physical characteristics of the local street network, and thus can be reduced by altering the local street characteristics to facilitate walking as an alternative means of travel for transit access trips. Two local-street characteristics are considered, trip distance and pedestrian route directness (the ratio of trip distance and straight-line distance). To investigate the relationships, a nested logit model is estimated using the 2003 Bangkok Travel Survey dataset. The model results indicate that trip distance negatively impacts pedestrian travel the most at a statistically significant level. Therefore, policies to reduce transit access trip distance are likely to increase the likelihood of walking, as opposed to using neighborhood transit services. In addition, pedestrian route directness is used to determine appropriate policy directions and target areas to improve transit accessibility.

bullied by Pluto. Discover how to domesticate astrology's bad boy and master the transition into the Pluto era. Pluto, the planet of transformation, is in transit in Capricorn through 2024, awakening a tidal force of change. The last time we saw this combination, the world felt the impact in the Revolutionary War that birthed America. In this wickedly funny guidebook, world-renowned astrologers Hazel Dixon-Cooper and Cathleen Bridgett Walther are here to show you how to use this unique time to overcome fear, guilt, regret, and self-punishment, and find your place in the cosmos. Their in-your-face advice and step-by-step instructions will help you unlock the heroic part of your soul and flourish in every aspect of your life. Pluto's transit in Capricorn presents all of us with a series of cosmic wakeup calls—bringing a unique opportunity to overcome our most difficult and ingrained traits. Begin now with *Harness Astrology's Bad Boy*, and you will emerge this Pluto transit stronger, wiser, and more in control of your life than ever before.

Transit Street Design Guide Mar 12 2021 "The Transit Street Design Guide sets a new vision for how cities can harness the immense potential of transit to create active and efficient streets in neighborhoods and downtowns alike. Building on the Urban Street Design Guide and Urban Bikeway Design Guide, the Transit Street Design Guide details how reliable public transportation depends on a commitment to transit at every level of design. Developed through a new peer network of NACTO members and transit agency partners, the Guide provides street transportation departments, transit operating agencies, leaders, and practitioners with the tools to actively prioritize transit on the street."--Site Web de NACTO.

Saturn in Transit Nov 27 2019 Reveals Saturn's useful and developmental influence in our lives. destroying the old and outmoded within, and throwing us periodically into chaos, which invariably generates a creative transformation of purpose in our lives.

Lost in the Transit Desert Sep 05 2020 Increased

redevelopment, the dismantling of public housing, and increasing housing costs are forcing a shift in migration of lower income and transit dependent populations to the suburbs. These suburbs are often missing basic transportation, and strategies to address this are lacking. This absence of public transit creates barriers to viable employment and accessibility to cultural networks, and plays a role in increasing social inequality. This book investigates how housing and transport policy have played their role in creating these "Transit Deserts," and what impact race has upon those likely to be affected. Diane Jones Allen uses research from New Orleans, Baltimore, and Chicago to explore the forces at work in these situations, as well as proposing potential solutions. Mapping, interviews, photographs, and narratives all come together to highlight the inequities and challenges in Transit Deserts, where a lack of access can make all journeys, such as to jobs, stores, or relatives, much more difficult. Alternatives to public transit abound, from traditional methods such as biking and carpooling to more culturally specific tactics, and are examined comprehensively. This is valuable reading for students and researchers interested in transport planning, urban planning, city infrastructure, and transport geography.

Representation of Transit Its in Network-based Travel Models Jul

04 2020 The increased use of Intelligent Transportation Systems (ITS) technology in public transit has two major impacts on travel forecasting. First, the technology will often result in an improved volume and quality of data that may be used for planning. Second, the technology may improve the performance of the transit system in a way that is visible to the traveler, thus traveler behavior will change.

Light Rail Transit Systems Aug 05 2020 Light Rail Transit Systems: 61 Lessons in Sustainable Urban Development shows how to design and operate light rail to maximize its social benefits. Readers will learn how to understand the value of light rail and tactics on its effective integration into communities. It uses strong supporting evidence and theory drawn from the author's team and their extensive experience in developing new light rail systems. The book uses numerous case studies to demonstrate how key concepts can bridge the geographic limitations inherent in many transit-related discussions. In addition, users will learn how to develop important relationships with local decision-makers and communities. Presents applied research by experienced practitioners and academic researchers Draws on more than 50 cases from Europe, the Middle East, the UK and US Incorporates five themes on why it's important to invest in light rail, including effective mobility, and for an efficient city, economy, environment and equity Includes a checklist for planning public transport projects
