Applications of Biotechnology for Sustainable Textile Production May 31 2022 Applications of Biotechnology for Sustainable Textile Production is a practical guide to the fundamentals, methods, and future prospects for sustainable biotechnological and nanobiotechnological approaches to textile production. The textile industry is highly motivated to reduce its use of natural resources, reduce waste, and cost. Processes such as dyeing, printing and finishing fabrics traditionally require a lot of water and can produce hazardous wastes as a by-product. In order to help improve these processes, this book evaluates different technologies, comparing them as ways of saving water, energy, material waste, and time, in addition to the reduction of wastewater and sludge. Technologies investigated include enzymatic treatments, ultrasonic treatments, advanced cotton fiber pre-treatment to increase dye receptivity, nano-biotechnology, plasma technology, and foam technology in the finishing process. Health risk assessments and complications resulting from usage of chemicals and other traditional processing technologies are also examined. Addresses all five main stages of textile processing, including pre-treatment, dyeing, finishing, drying, and quality control Provides an overview of the techno-economic context of the modern textile industry, explaining where sustainability fits with other priorities Includes case studies throughout showing how these methods can be used for sustainable textile production

Chemical Alternatives Assessments Apr 29 2022 With contributions from experts across the globe, this volume addresses some of the key concepts behind risk assessment of alternative chemicals.

Specificity of Proteolysis Jul 09 2020 Specificity of Proteolysis presents a survey and conclusions on the action of proteinases - enzymes which are cleaving proteins or peptides. The specificity of proteinases which is determined as the sequence of amino acids at the cleavage site of a substrate, is an important criteria to choose an enzyme as tool in protein research. Whenever one is looking for an enzyme to act at a defined site or to give defined cleavage products one will find comprehensive information in this work. Comprehensive information about more than 280 endopeptidases which are based on the database LYSIS including a calculation program to determine cleavage sites, is given in the book.
